SMART CONTROL

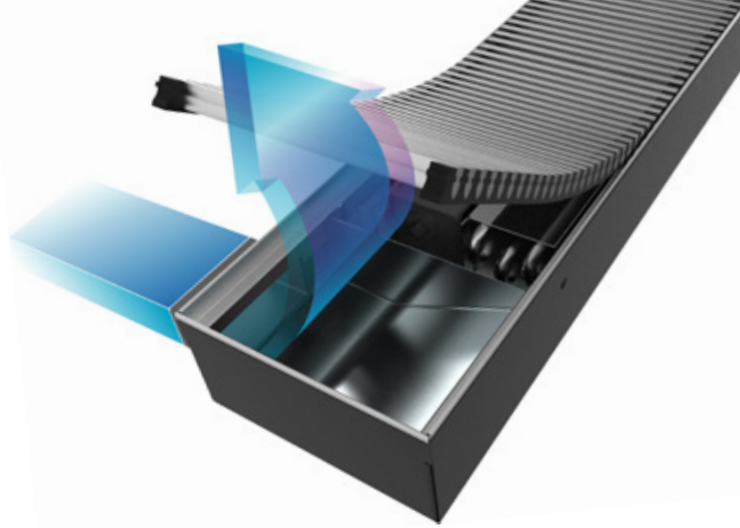

SMART H.V.A.C HOME SOLUTION

SMART HOME CONTROL & REMOTE MAINTENANCE

M1glio smart home control & remote maintenance system is especially developed for the heat pump management, but it also includes other standard smart system features such as room temperature, fresh air, lighting, curtains, home theatre and security control. At any time, you can easily access your home energy source, even while on the road. With your smartphone or tablet, you can switch on/off your heat pump, set the mode, heat the sanitary water or make any other operation. Once you register / log in online, our service technicians may have remote access to your heat pump via M1glio smart control system and provide a rapid troubleshooting, parameter reset, system restart, or guidance.

COMPLETE CLIMATE CONTROL AND HIGH POWER BY CLIMA CANAL

Heating, cooling, ventilation.

Despite its modest size, Clima Canal is a powerful tool for heating, cooling and ventilation, all in one. Silent and unobtrusive, Clima Canal provides the greatest possible climatic comfort. This high-tech low-H₂O heat exchanger with its thermal activator has been specially developed to deliver record output within super-compact dimensions. All this at an inaudible noise level of less than 29 dbA! In boost mode, for ultra-quick heating or cooling, the output is even higher. Using the latest EC motors enables Clima Canal to consume up to 50% less electrical energy, and enables remote control using the latest home automation and building management systems.

SUPER SLIM AND POWERFUL HEATING, COOLING AND VENTILATION BY BRIZA

Briza is a climate unit with a dual personality: a Hybrid that provides comfortable heating in winter and refreshing cooling in summer. It provides you with an optimal indoor climate throughout the year. The power behind the Briza comfort system is the ingenious Low-H₂O technology, combined with a nearly silent dynamic system. Briza is the slimmest hybrid available on the market with this much power. It's like putting the power of a Jaga Ventilator in a slender design radiator. That also makes Briza ideal for connecting to low-temperature systems like heat pumps, solar energy systems and condensing boilers.

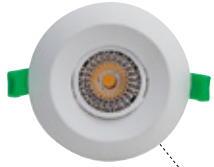

W-SOUL DHW TANK EXTENSION FOR A NEW HEAT PUMP

The demand for hot water differs significantly for every household. One of the factors is the number of residents, and another one is their showering habits. For example, if more members of a household set off for work and school at the same time, plenty of hot water needs to be continuously available for the shower in a short period of time. The combination of the software that is integrated in our heat pump and the water tank that we use as an energy buffer with an extra long coil can provide 7.1L of water per minute, which is the same comfort provided by a gas boiler, only that our comfort is provided in a more eco-friendly way.

ONE SYSTEM ONE BRAND

We at M1glio are passionate about life and the way we live it. We believe that there is no better way to cherish life than to caress senses with beautiful items around us. Therefore, design is at the heart of every product we offer but we also think that design and technology can co-exist in a pretty symbiosis. Our products are designed with Italian passion and Northern European functional pragmatism. This means that we cherish the environment and we never stop thinking about how to protect raw earth, while still offering good-looking products.

On the one hand, we deliver high quality products which integrate seamlessly to each other but we also go further than that. We believe that our passion works best when shared. Therefore, M1glio offers a B2B or B2C platform for enthusiastic entrepreneurs and designers to work together with us to create a one - brand system, so that the end customers have efficient one - point of contact for after sales services.
