# Moving to reusables without compromising on the following:

1

## Branding

We can personalise our products to your branding. Find more information on lead times and order quantities below.

2

## Hygiene

Our products are industrially dishwashable. We offer guidance on the temperature, see alongside each item.

3

## Food Quality

We have rigorously tested our products to ensure your food quality is not compromised. If you'd like samples to try, let us know.

# Our reusable materials

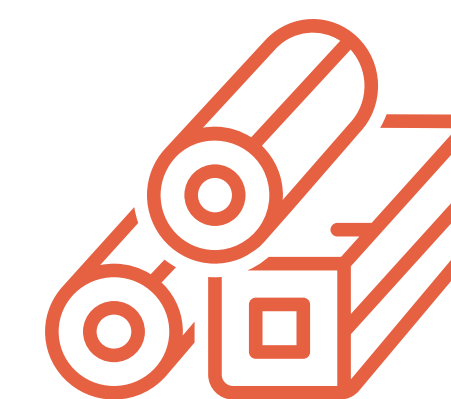

PP

Polypropylene is a thermoplastic polymer used in a wide variety of applications. PP has a high melting point therefore it is suitable for hot liquids and foods and is dishwasher-safe.

Wood fibre and PP

A composite of 40% wood fibre, 60% PP. The wood fibre derives from unused residual materials in production. This material is dishwasher safe.

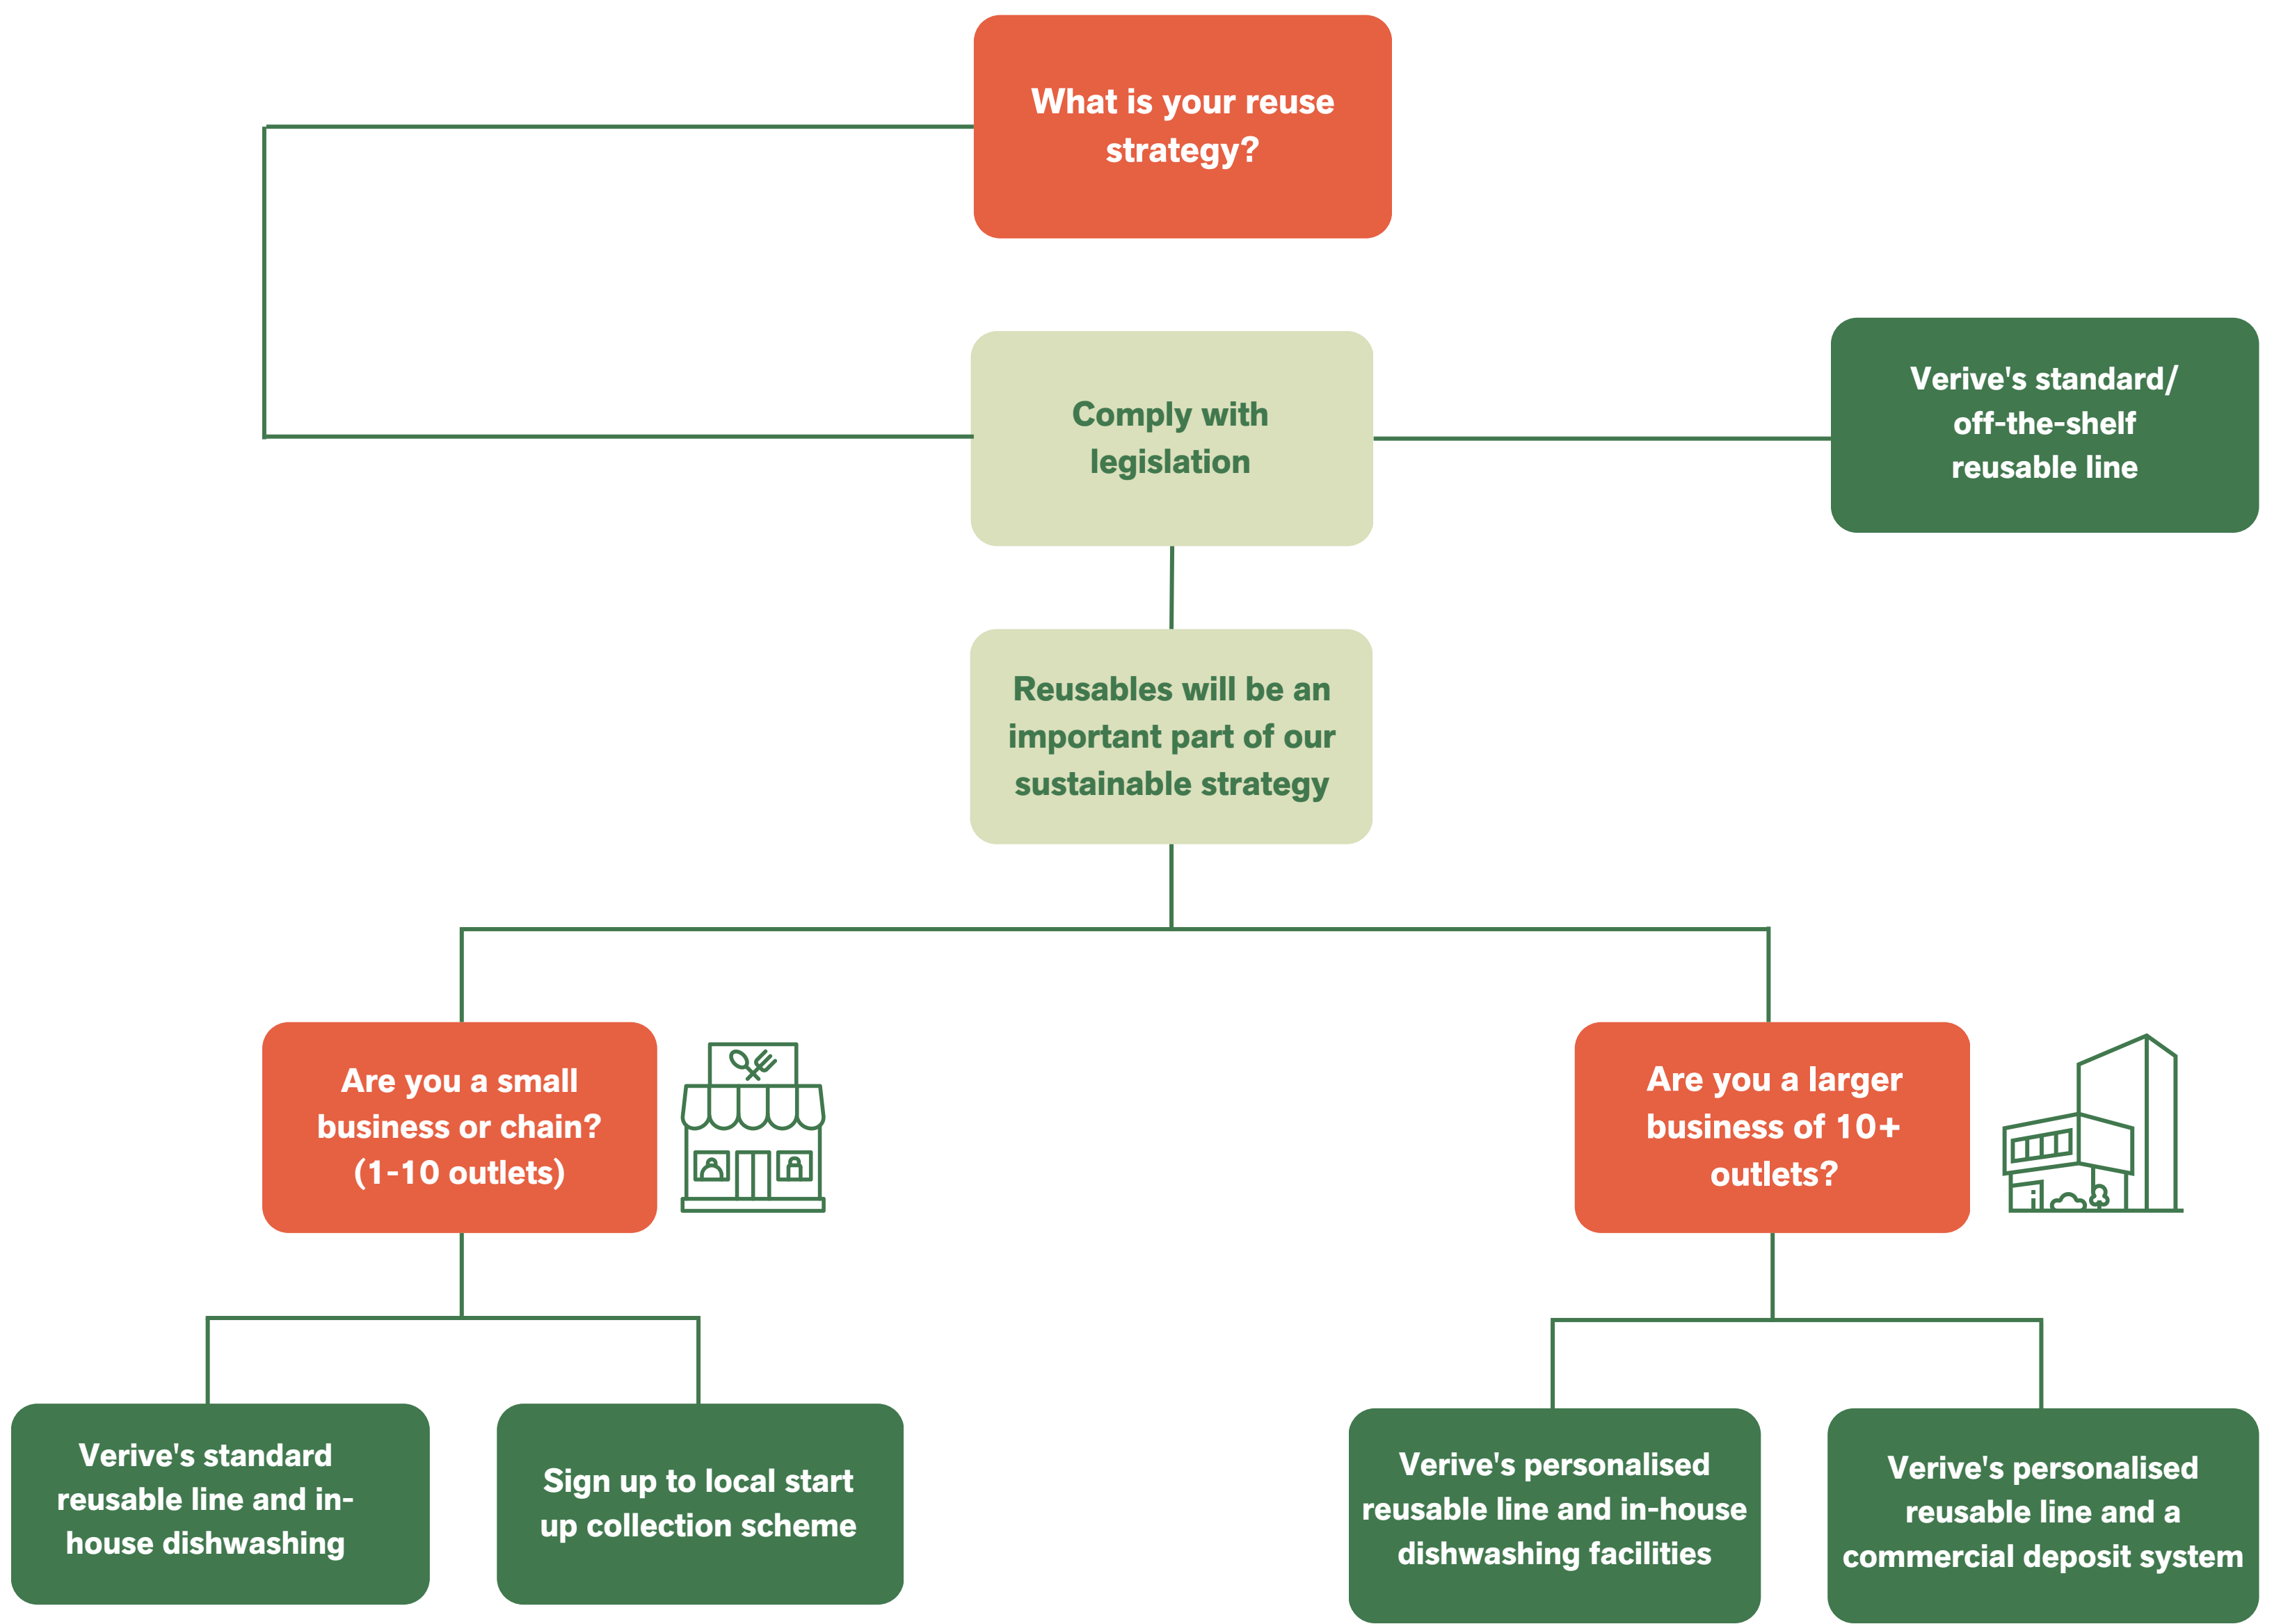

Chrome steel

Our chrome steel consists of an alloy of 18% chromium, 81% fine iron and 1% carbon. This material is dishwasher-safe.

# What is your plan?
