

PRODUCTION SUPERVISOR

LCV is looking for a motivated "**production supervisor**" for scaling up the contract manufacturing activity.

MISSION

The candidate in question must be able to grow with the company; we have work on the shelf and the production team is growing. This is to indicate that we are really looking for a **start-up / scale-up profile** who can operate the machines but who will evolve in the short term towards production supervision and can steer growth in the right direction.

TASKS

The **tasks** and responsibilities can be summarized as follows;

Being responsible for the production **output**: This means that the production supervisor makes the planning but also absorbs escalations to the extent that the end-of-month turnover reflects this planning.

Management of the production **team**: For this we look at the following facets;

- Implementing a correct work ethic and production-oriented mentality.
- First escalation level in the event of problems. Since we work with highly technical productions, a bachelor's or master's degree is recommended with a very strong affinity for production technology.

Structural control of operational **growth**; the candidate is ideally someone who not only takes responsibility ON the shop floor, but takes responsibility ABOUT the shop floor. This means that the candidate in question can accompany and implement the growth to shift system, more machines and larger team

PROFILE

In terms of **profile**, you are someone who has the necessary experience, who picks things up quickly, has a logical and rational mind, who can structure well and can show and earn leadership in this. You can also stand with surrender to the machines and do this to continue the growth path. This will also require the necessary flexibility to switch to shifts and continue until the pieces are ready.

You have a passion for innovation in welding and 3D printing and you show a **drive** that is the essential characteristic of the LCV core team.

OFFER

What we offer in terms of **remuneration** depends on the profile and experience. You will also be a **member of the operational management** team and you will be assisted by

engineering to continuously upgrade processes and hardware according to the "Total Quality Management" philosophy. LCV is also an opportunity to be part of a challenging and very interesting adventure in the material and manufacturing technology sector.
