Rogachev, Moscow, Russia.

# **Aim:** to study beet trypsin inhibitors

homogenisation & extraction

## **Result 3:** The sample purity was checked

75 кDa

50 кDa

37 кDa

MW\_eluate 1 -

# chromatograp Result 2: trypsin

affinit

#### Michaelis constant calculation

### **Result 1:** trypsin was isolated from larvae of blowfly

0.0506x + 216.32  $R^2 = 0.6306$

Г	1	y
		A MANAGEMENT AND A REAL AND A

## **Conclusion:** beet inhibitors of trypsin decrease trypsin activity $(Ki = 15-60 \pm 10 nM)$
