A 3X8 screw at "B" can be used to adjust the flex and traction in the front end and is used in the default setup. When driving on the medium to low traction track conditions, removing this screw can increase the amount of steering.

REAR/ 後方

3X8 Screw "A" and "B" can be used to adjust rear traction characteristics, with both screws used in the default setup. When driving on the medium to low traction track conditions, removing the screw at "B" can increase the rear rotation, While removing the screw "A" can increase rotation in the rear end resulting in more off power steering.

此3X8的螺絲可用來調整後半部的扭動與抓地力，初始設定請將A與B螺絲鎖上，當跑道的抓地力是中等或低抓地力時，移除這個螺絲B可以增加後方的車身滾動，當移除A時可以增加後方的滾動的速度，並增加放油時的轉向能力。

WEIGHT DISTRIBUTE ADJUSTMENT INSTRUCTION / 車身配重說明

There are 4 locations to add or remove the R133003 10g brass weight, adding more weight in front can make the car easier to drive with more predicable handling, While adding weight in the rear can increase steering, especially off-power.

車身共有四個位置可以加上R133003 10公克的配重塊，在正常情況下於前方加重可以讓車輛更容易駕駛，操控性更好，於後方加重可以讓車輛於放開油門時增加更多的轉向能力。

FLEX ADJUSTMENT INSTRUCTION / 車身扭動調整說明

There are 5 screws for attaching the motor mount to the main chassis, we recommend starting with screw #4 and #5. Note the #1 screw requires 1mm shims to be added between the motor mount.

When using screws at #1, #2 and #3, chassis flex will be reduced. This will help to increase response of the steering response and may be useful in low traction situation. For higher traction, less screw on the motor mount can make the car more easier to drive.

共有五顆螺絲可用來固定馬達座，建議初始鎖上 #4 #5 這二顆螺絲，當需要鎖上 #1 時，需於中間加上一片 1mm 的墊片，當 #1 #2 #3 都鎖上時，車身整體的硬度會增加並增加車輛的轉向反應，建議使用於低抓地力的場地，當場地的抓地力高時，鎖越少的螺絲可使車輛更容易駕駛。

The bottom screw for the rear shock tower can be used to adjust the flex of the rear suspension. Removing this screw will reduce rear traction giving the car more steering, While installing this screw can increase overall stability.

避震架的底部螺絲可用來調整抓地力，當底部螺絲移除時可減少後方的抓地力並增加轉向力，當螺絲鎖上時可增加後方的穩定性。

The front shock bottom screw here can use to adjust the flex of the front suspension, With the screw fix can reduce the flex of the front shock tower, in most condition it will increase front steering response, remove screw here can increase flex of the tower and reduce initial steering response.

前方避震的支撐力可以用底部的螺絲來調整，當螺絲鎖上時可減少避震架的扭動，在多數的情況下可增加前期轉向的反應，當移除螺絲時會增加避震架的扭動並減少初期轉向的反應。

There are 3 screws in servo mount to adjust front end flex, With all 3 screws installed, it will stiffen front end flex and increase steering response. Using screw #2 or #3 only will increase front end flex, reducing steering response especially into the corner.

此處共有三顆螺絲用來固定伺服機與調整車身前半部的扭動，當三顆全鎖時車頭轉向的反應最好，當只有使用 #2 與 #3 號螺絲，如此可讓前半部車身有多一些扭動，可以減小初期轉向的反應。

R132044 Bell Crank 18mm Alu B.B Assembled (2)

The optional R132044 bell crank 18mm are designed for A10 and R12 series of cars.

They are the same distance as the plastic bell cranks but are precision CNC machined from 7075-T6 aluminum. They come with the bearings pre-installed for minimal paly and give more precise handling especially on the high traction tracks.

適用於R12與A10系列車種的7075-T6鋁合金雙搖臂，此搖臂的距離與塑膠件相同可以直接替用，預先安裝的培林將虛位減到最小並提供更精確的操控性。
