

HOUSEWISE[™] THERMOSTAT USER'S GUIDE

AMAZON ALEXA

Amazon Echo includes Alexa, a cloud-based voice service that can be used to give commands to the Housewise™ thermostat. Once you integrate the Housewise thermostat with Amazon Echo, you can control your Housewise thermostat simply by speaking your commands.

REQUIRED COMPONENTS

- Housewise™ thermostat
- Housewise thermostat registered account (email and password)
- Amazon Echo, Amazon Tap, or Echo Dot product
- Amazon Alexa app
- Wi-Fi[®] network connection

PAIRING THE AMAZON ALEXA APP WITH YOUR HOUSEWISE™ THERMOSTAT ACCOUNT

You need to pair the Amazon Alexa app with your Housewise thermostat account before you can give voice commands to Housewise thermostat.

Note: This procedure assumes that your Housewise thermostat and your Amazon Echo are configured, running, and meet the requirements listed in *Required Components*.

GIVING VOICE COMMANDS

When using the skill, you need to specify by name which thermostat to use. There are two ways to define this/these names:

- Use the thermostat name(s) you set up already. These are shown in the Housewise[™] thermostat app and can be changed (go to *Settings > Preferences > Thermostat > Input* the new name), or
- Create an Alexa group, like Bedroom or Downstairs, and add the thermostat and/or one or more sensors to the group. More information at *http://amzn.to/2965dCE*.

Once you have established the naming, you need to start with the wake word, "Alexa," and then tell Amazon Echo you want the command to apply to the name or group of your thermostat(s).

CURRENT ALEXA VOICE COMMANDS FOR THE HOUSEWISE™ THERMOSTAT

FREQUENTLY ASKED QUESTIONS

How does my Amazon Echo work with Auto mode?

If you use Auto mode, you can still ask Alexa to change the temperature by saying, "Alexa, set (Thermostat Name) to x degrees." Your Housewise™ thermostat will then use this temperature as the midpoint between your heat and cool set points (based on what you've set your minimum heat / cool temperature delta to).

For example, if you're in Auto mode and you ask Alexa to set the temperature to $72^{\circ}F(22^{\circ}C)$ and you have your minimum heat / cool temperature delta set to $4^{\circ}F(3^{\circ}C)$, your heat set point will become become $70^{\circ}F(72-2)$ (20.5°C) and your cool set point will become $74^{\circ}F(72+2)$ (23.5°C).

How do I delete or reset my connect between my Amazon Echo device and my Housewise[™] thermostat?

Unplugging your Amazon Echo will not reset the connection with your Housewise thermostat. You can reset your Housewise thermostat's connection to your Amazon Echo by following these steps:

- 1. In the Alexa app, select Settings.
- 2. Select Connected Home.
- 3. Under Device Links, click Unlink from Housewise.
- Under Devices, click Forget next to the device you would like to delete. To delete all, select Forget all devices and groups.
- 5. In the confirmation box, confirm *Forget* or if you don't want to reset the connection, select *Cancel*.
- Follow the steps at the beginning of this document to reconnect your Housewise thermostat.

If you want to completely remove your Housewise thermostat account from your Amazon Echo, complete 1-5 above and:

 Login to the www.carrier.com/myhome web portal go to My Apps > Amazon Connected Home Services > Remove.

My Amazon Echo is set to Celsius! How do I change it to Fahrenheit?

To change your settings from Celsius to Fahrenheit or vice-versa, simply:

- 1. Open your Alexa app.
- 2. Tap on Settings in the upper left corner.
- 3. Select your Amazon Echo.
- 4. Under *Metrics Measurements*, select *OFF* for Fahrenheit, and *ON* for Celsius.

Alexa is saying "Sorry, device (name of Housewise™ thermostat) is not responding." What do I do?

This is most likely happening because your Housewise thermostat is not connected to Wi-Fi[®] or your Housewise thermostat app. There are a few things you can try:

- Make sure your Housewise thermostat is connected to Wi-Fi. To check your Housewise thermostat's Wi-Fi connection, from your Housewise thermostat select MENU > Settings > Wi-Fi > Wi-Fi Enabled > Network.
- Login to the Housewise thermostat app and ensure your thermostat is connected.

Alexa is saying "Sorry, I can only set the temperature between (X) and (X) degrees." What do I do?

Alexa will always follow the minimum and maximum temperatures you have set on your Housewise™ thermostat. If your minimum is set to 60°F, and you ask Alexa to change the temperature to 58°, you'll receive this error message. To change your minimum and maximum temperature ranges, from your Housewise thermostat select *MENU* > *Settings* > *Preferences* > *Cool* (or *Heat*) *Temperature Ranges*.

If you get this error message, but you're saying a temperature that is within your minimum and maximum, there's a chance that your Housewise thermostat is set to Celsius instead of Fahrenheit.

Alexa is saying "Sorry, which device did you mean?" What do I do?

Just repeat the name of your Housewise™ thermostat.

Alexa is saying "Sorry, I did not understand the request." What do I do?

Alexa might not be hearing you properly. There are a few things you can try:

- Make sure there is no background noise when you're speaking, and speak slowly and clearly.
- Check to see if Alexa is hearing you properly. On your Alexa App go to Settings > History and check to see how Alexa has recorded what you've said. If it's not what you said, you should complete Voice Training in your Alexa app.

FREQUENTLY ASKED QUESTIONS (con't)

Alexa is saying "Sorry, I could not find any devices or groups named (thermostat name) in your account." What do I do?

This means Alexa might not be able to understand the name of your Housewise™ thermostat.

Here are a few things you can do:

- "Make sure you're using your Housewise thermostat's name correctly. To confirm what you've named your Housewise thermostat, go to Settings > Preferences > Thermostat on your thermostat.
- "Make sure that your Housewise thermostat's name is easy to understand. For instance, a name that is spelled differently, ie) 'b3dr00m' instead of 'bedroom'.

You can change the name of your Housewise thermostat at any time by going to *Settings > Preferences > Thermostat > Input* the new name. Once you've changed it, you'll need to ask Alexa to discover devices again.

Does changing the temperature through my Amazon Echo put my Housewise™ thermostat into an indefinite Hold?

Yes, right now if you change your Housewise thermostat's temperature from your Amazon Echo, it will create an indefinite Hold, regardless of what your Hold preferences are set to.

Alexa is saying, "Discovery is complete. I couldn't find any devices."

If Alexa can't discover your Housewise™ thermostat:

- 1. Make sure your Housewise thermostat and your Amazon Echo are connected to a Wi-Fi $^{\circ}$ network.
- To check your Housewise thermostat's Wi-Fi connection, from your Housewise thermostat select MENU > Settings > Wi-Fi > Wi-Fi Enabled > Network.
- Login to the Housewise thermostat app and ensure your thermostat is connected to your mobile app.

How can I check if my Housewise™ thermostat and my Amazon Echo are connected?

If you're having issues controlling your Housewise thermostat with Alexa, you can check to make sure they're connected.

First, check your Alexa app.

- 1. Click Settings in the upper left corner.
- 2. Scroll down and click Connected Home.
- Under Devices, you should see your Housewise thermostat listed.

Then, check your Housewise thermostat.

- 1. Login to www.carrier.com/myhome
- 2. Go to My Apps.
- Make sure that Amazon Connected Home Service is listed.

If it's not listed, you should try the device discovery process again.

Do my Housewise™ thermostat and my Amazon Echo need to be on the same Wi-Fi[®] network?

No. They do both need to be connected to Wi-Fi networks, but they can be on separate Wi-Fi networks. In fact, you could ask Alexa to turn your heat down at your cottage if you have a Housewise thermostat there.

During the Login to Authorize App screen, I received an error message that says, "The Email Address field must contain a valid email address" after I entered my login credentials. What's wrong?

Make sure there are no spaces before or after your email address before you login to your account.
