

Dear Valued Customers,

The Coronavirus is all over the news, and we wanted to let you know about a product that helps fight against RNA viruses similar to the Coronavirus. ***The Air Scrubber by Aerus fights against RNA viruses such as the flu, Ebola, common colds, hepatitis C&E, and more.***

How Do Air Scrubbers Help?

Like we mentioned above, Air Scrubbers kill airborne irritants, allergens, odors, and RNA viruses.

- Kills up to 99% of the airborne irritants in your home. Bacteria, allergens, dust, etc.
- Helps to ***GREATLY*** reduce colds, coughs, RNA viruses and other common illnesses.
- Reduces odors. Pet odor, smoke, food, etc.
- Keeps the home cleaner. Far less dust will build up in your home.
- Easier breathing for everyone, ***but especially allergy sufferers, asthma sufferers, small children, elderly, and anyone who has breathing issues.***

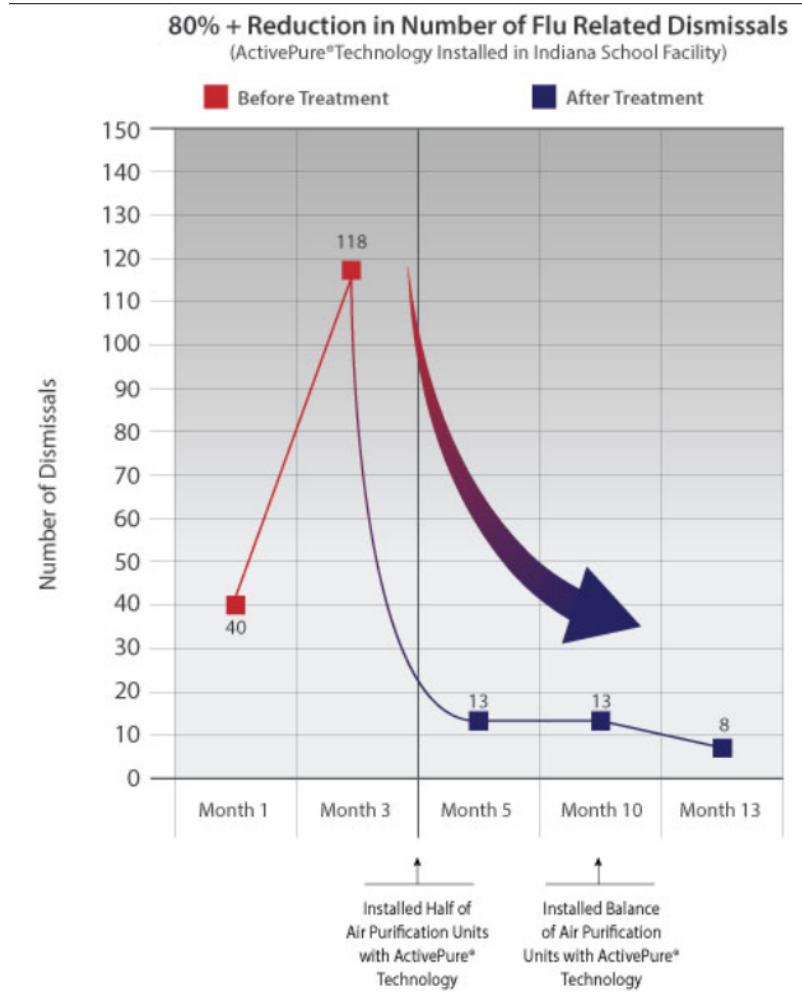

What Does It Reduce?

The technology used by the air scrubber is aggressive and attacks the irritants rather than being passive and trying to collect them, like an air filter. ***This ActivePure® technology leads to a GREAT reduction in surface germs, airborne germs, and sickness.***

How It Works

The Air Scrubber uses ActivePure® technology to send out scrubbing particles into the air that attack the airborne irritants. Most systems use a traditional filter

that tries to catch these things as the air passes through the system. The Air Scrubber is far more active, actually going after the debris in the air.

This technology was developed by NASA, and is used in labs, hospitals, and you guessed it, spaceships!

The Air Scrubber plugs directly into your ventilation system and starts working right away. It's very much a "set it and forget it" type of system, which makes it VERY easy on homeowners.

Prevent the Spread Of Coronavirus

Right now, there is currently no vaccine to prevent COVID-19. The best way to prevent illness is, of course, to avoid being exposed to this virus. Here is what the Center for Disease Control (CDC) recommends for everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe.
- Wash your hands often and vigorously with soap and water for at least 20 seconds, especially after going to the bathroom; before eating; and after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty.

Follow the CDC's recommendations for using a face mask:

- CDC does not recommend that people who are well wear a face mask to protect themselves from respiratory diseases, including COVID-19.
- Face masks should be used by people who show symptoms of COVID-19 to help prevent the spread of the disease to others.
- The use of face masks is also crucial for health workers and care takers.

If you have any questions about Air Scrubbers, or any aspect of your home comfort, give us a call [\(412\) 372-5544](tel:4123725544), or email us at jr.lgph@verizon.net.
