Discover the endless possibilities of Carrier® Ductless & VRF products.

Carrier Can Take You Farther.

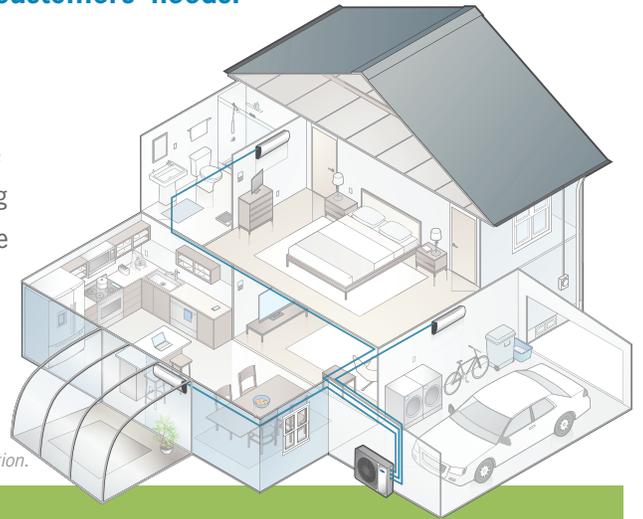

With Carrier® Ductless & VRF Systems, there are even more innovative and flexible solutions that can be specifically tailored to meet your customers' needs.

WHY YOUR CUSTOMERS NEED A CARRIER DUCTLESS OR VRF SYSTEM

Whether your customers need air conditioning for a room that lacks the necessary ductwork or own a business that needs supplemental heating or cooling, Carrier Ductless & VRF systems offer smart solutions they're looking for. And that's only part of the reason to choose Carrier. We offer a superior level of service support and product training for every system, to stand behind our dealers and ensure the highest level of satisfaction for their customers.

Graphic represents a potential residential multi-zone system installation.

An Option For Every Situation.

DOES THE SPACE HAVE A FLOOR, CEILING OR WALL?

Going ductless doesn't involve going through a major renovation. Fact is, there's very little mess at all. Nor does it mean sacrificing a room with a view to a bulky window unit. Instead, a ductless

heat pump or air conditioner integrates neatly into the space. It's mounted where it's least obtrusive—and most effective at quietly and gently directing treated air to every corner of the room.

VRF Heat Recovery and Heat Pump systems for commercial applications allow perfectly-matched, flexible solutions.

These are the perfect choice for large spaces where individual preferences or integrated building controls are necessary, like hospitals, nursing homes, education and office buildings, hotels or restaurants.

THEN CARRIER HAS THE RIGHT SYSTEM.

Hot or cold rooms

Target those problem spots in a home or office that never seem to be comfortable enough with a ducted system alone.

Sunrooms or home additions

Carrier offers efficient residential ductless heat pump and AC systems that can be perfectly matched to keep a smaller add-on space comfortable all year.

Basements

Choose from high-wall, underceiling or cassette indoor units to make a finished basement without adequate ductwork as comfortable as the rest of the home.

Strip mall retail spaces

Light commercial systems offer the power and flexibility when a business needs to be divided in to smaller units or expand in size.

Larger commercial applications

Carrier VRF Heat Recovery and Heat Pump systems provide impressive flexibility with the ability to connect up to 40 indoor units to one outdoor unit. And they offer flexibility in piping configuration—up to 720 feet long and up to 130 feet high.

Smart Comfort. Superior Performance.

The wide array Carrier® Ductless & VRF systems offers numerous solutions for spaces ranging from small residential rooms to large commercial applications. And we stand behind them all with the trusted Carrier name.

THE POWER OF VARIABLE SPEED

The variable-speed inverter-driven compressor for ductless applications is the key component that gives Carrier systems their superior performance, energy efficiency and quiet operation.

- **Energy Efficient** - Advanced inverter technology allows systems to achieve excellent energy efficiencies – up to **30.5 SEER, 10.3 HSPF and 15.6 EER.**

- **Extreme Comfort Performance** - Heating down to -22 degrees and cooling up to 130 degrees.

- **Personalized Comfort Control** - Enjoy separate comfort settings from the rest of the home or building with individual remote control.

- **ENERGY STAR-Qualified Systems** - Select models are ENERGY STAR-qualified in both heat pump and cooling-only systems.

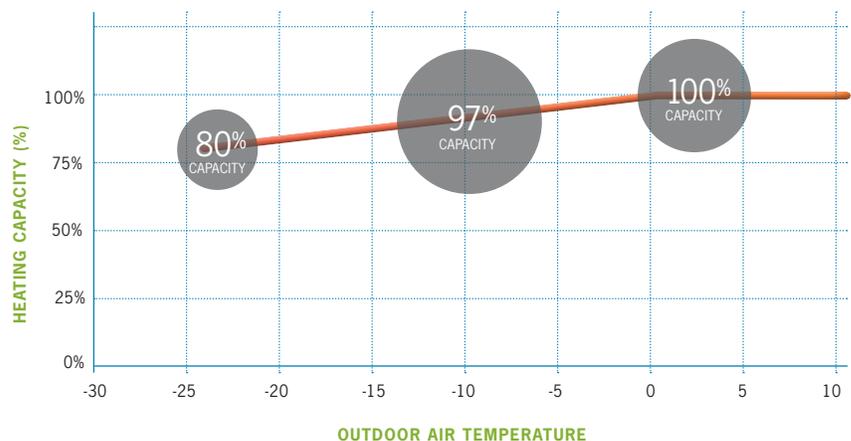

- **Quiet Operation** - Ideal for spaces where people spend large amounts of time and need low noise levels.

- **Environmentally Friendly** - Washable filters on indoor units and the use of R410A refrigerant reduce harmful effects on the earth.

- **Heat Recovery Commercial Line** - VRF systems for commercial applications offer capacities for larger buildings with the flexibility of installation configurations.
