Before, HVAC systems were primarily mechanical in their functioning, with very few electronic components. Things have changed, especially with newer and higher efficiency models. The issue with a power surge is that you don't have a way to tell how much damage it will cause to your system if and when it happens.

Large power surges could be very devastating, many times leading to immediate failure. In a majority of cases, power surge-damaged HVAC units have to be replaced and cannot be repaired.

While some units may withstand a power surge and continue to work like before, there could be hidden damages. Over time, this hidden issue could compromise the unit's efficiency and lead to premature failure. This is certainly not good news, especially with something that's as vital and expensive as your HVAC system.

While you cannot really do anything to prevent power surges from occurring, there are some things that could be done to safeguard your HVAC system and other valuable home electronics. It is recommended that you install a power surge protection for your HVAC system to help protect your unit from damage. Call us today and schedule an appointment to have a surge protector installed on your HVAC system at a cost of \$155.00 (includes parts and installation).

EARLY BIRD *Special*

Get ready for our annual early bird special!

Beginning April 1st we will offer the 21 point cleaning and inspection for the special price of \$79.00 for a limited time so check your calendar and call us and get your preventative maintenance scheduled so you can be sure your system is ready to handle the spring heat!

**AFTER
HOURS
SERVICE**

After hours? No problem!

We offer emergency services for all of your heating, air conditioning and water heater breakdowns. Our regular hours are 8:00am - 5:00pm so after hours just call (513)769-0871 and follow the prompts to be connected to our live operators to have a service technician dispatched to your home ASAP.

(additional service fee applies)

The **R22** Phase Out
What's your plan?

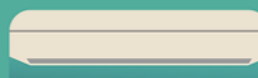

As per the US Environmental Protection Agency, R22 refrigerant will become illegal in the United States on January 1, 2020. After that R22 phase out date, R22 refrigerant can no longer be manufactured or imported into the US and as of now current supplies to recharge older systems are increasing in price, are becoming very limited and possibly not going to be available at all.

With that in mind, and for a limited time, we are offering our lowest discounted prices possible to make it affordable to replace your R-22 systems with compliant R-410 systems to avoid potential costly or non-repairable breakdowns.

Call our office today, (513)769-0871, to schedule an appointment to get your personalized pricing from one of our Home Advisers.

TECH TIPS

1. Switch your Filter
2. Schedule Furnace & AC Tune-Ups
3. Keep Track of your energy bills
4. Don't be afraid to call
