Meeting your Heating & Cooling needs since 1990!

9301 Reading Rd.
Cincinnati, OH 45215
513-769-0871

Visit us on the web at: <http://cincinnatiheatingandcooling.com>

As the summer heat continues we want to remind you that getting a tune up on your AC system is more important than ever and our 21 point cleaning and inspection will ensure your system will continue to keep you cool and comfortable!

Call our office, 513-769-0871, to schedule an appointment today!

Don't forget to ask about our worry free "Preventative Maintenance Agreements" that offer discounts and priority service to meet your heating and cooling needs all year long.

Homeowners, especially if they have allergies, are reluctant to open their windows. Therefore they are going from heat to air conditioning immediately because they just cannot handle the outside air as the suffering is not worth the economic savings that they'll get by opening the windows and not running the air.

If you keep your house closed up and do not have a high efficiency filtration system, a UV sterilization system or a whole house humidifier, it is like breathing in a bubble. Homes are built so tight that we are all just sharing the same air over and over again and that would be the equivalent of blowing up a balloon and then having somebody else breathe what's in the balloon. We're doing it every day in our homes and there are solutions.

Let's freshen up that air with products proven to make an impact on the air you breathe in your home!

**APCO UV
Light System
\$549.00**

- ~Installs directly on to your HVAC system.
- ~Scrubs the air as it passes through the air system.
- ~Reduces airborne pollutants.
- ~Eliminates odors.

Air-Purifier System

16x25 \$978.00

20x25 \$1,045.00

4" Filter Kit \$675.00

- ~Whole house purification system.
- ~Proven effective against 3 common pathogens:
 - Influenza
 - Common cold
 - Strep Throat

**Large By-Pass Humidifier
\$500.00**

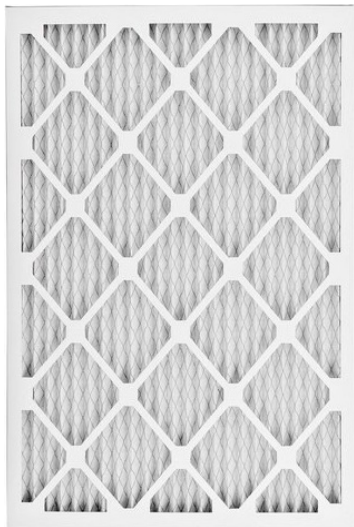

- ~Helps you breathe more comfortably.
- ~Prevents dry skin.
- ~Heats your home more efficiently.
- ~Prevents the spread of airborne illnesses.

Call today and schedule one of our in home advisers to evaluate your system and give you a free new equipment quote!

Let's talk about dirty filters.....pictured is a filter we removed recently that became so dirty it collapsed and then began to get pulled in by the blower motor as the fresh air was pulled through the system....thankfully the customer noticed a difference in the air quality before it was pulled completely in and we were able to clean the blower wheel and put in a new filter and what could have been a major failure and costly repair to the system was caught just in time which is not always the case.

This is becoming a common occurrence and as you can see by the picture of a new filter that a simple thing like changing the filter (every 30 days for most systems) on a regular basis will ensure your system will run efficiently and you will avoid a major breakdown.

It is our goal to educate our customers so we can not stress enough the importance of taking the time each month to look over your system and replace your filter to ensure all is well and having your preventative maintenance done each spring and fall by our certified technicians to thoroughly clean and check your HVAC system will help to identify any potential problems that may cause a major breakdown before they happen.

If you need to replace your HVAC system or have an unexpected major repair we have financing options to meet your needs. Call our office (513)769-0871 or visit our website for more information.

5 Extreme Heat Safety Tips

Stay indoors during extreme heat.

Stay indoors, if possible. If you're working outdoors, make regular stops for time in the air conditioning or shade.

Stay hydrated.

Drink plenty of water on a regular basis.

10 to 3: Not for me!

Avoid strenuous activities outdoors during the hottest part of the day, typically between 10 AM and 3 PM.

Look before you lock.

Check the back seat of your car every time to ensure you do not forget children or pets.

Knock and talk.

Check on your older neighbors.

after hours

After hours? No problem!

We offer emergency services for all of your heating, air conditioning and water heater breakdowns. Our regular hours are 8:00am - 5:00pm so after hours just call **(513)769-0871** and follow the prompts to be connected to our live operators to have a service technician dispatched to your home ASAP.

(additional service fees apply)

1

Ice Power

When **AC systems** were **first introduced**, the output settings were measured in **"Ice Power"**.

2

Less Humidity

The **motivation** for the first **air conditioner** wasn't comfort, but to **reduce humidity levels**.

3

Gates Home

The **first fully air conditioned home** was built in a mansion in Minneapolis in **1913** by **Charles Gates**.

4

Cool Movies

One of the first businesses to **utilize air conditioning technology** was **movie theaters**. In the **1930's**, patrons flocked to theaters to enjoy the films and cool air during summer months.

5

Choose Auto

Don't set your **thermostat fan** to the "on" position all day. Rather, **choose the "auto" position**, where it will blow air only when the cooling system is running.

6

Wind Chill

Fans do little to actually cool the air, but they produce a **"wind chill effect"** by **evaporating the sweat from your skin** and **lowering your body temperature**.

7

1940's

If you wanted to buy a basic AC unit in the **1940's**, it would cost you approximately **\$350**. In **today's price** based on inflation, that'd be **\$3,500**.

8

First Car

The first car with **optional Air Conditioning** was introduced in **1939**. It **wasn't very popular** due to high cost and that it took up half the trunk space.
