

AC Pro 20 SEER Air Conditioner & Heat Pump

A SYSTEM THAT DELIVERS EVERYTHING YOU WANT, JUST HOW YOU WANT IT

The Pro Series is about control. It's about creating your environment, your way. So your contractor will make sure you have the exact features you want in your Pro Series system, that match your exact needs.

Energy Efficiency

Our Pro Series air conditioners and heat pumps feature variable capacity operation, allowing them to precisely match energy use with heating and cooling demand. This translates to significant energy savings, while maintaining comfort.

Personalized Control

All Pro Series heating and cooling units are designed to work with the Comfort Sync® control, which allows you to adjust your home's temperature from your smartphone or other mobile device. Pro Series zoning with multiple thermostats allows even more personalization.

Healthier Air

If you have pets, or if your home is in an area with poor air quality or excessive humidity, you know how difficult it can be to keep your air clean. The Pro Series solves these issues for you, give you powerful air filtration and exacting humidity control. The Pro Series fights pollen, dust, pet dander, bacteria, mold and other allergens by putting clean, fresh air, entirely in your control.

No more hot or cold spots, no more high humidity

Unlike conventional furnaces or air handlers that are either all the way on or all the way off, a Pro Series system with variable-speed air flow has the ability to adjust airtight up and down like a dimmer switch.

This level of control means quieter operation, especially during startup, along with better humidity control. It also eliminates temperature swings by making slight adjustments to temperature over time, so your environment stays exactly the way you want it.

Peace of Mind

AC Pro's series heating, cooling and indoor air quality products are designed and tested to meet AC Pro's highest standards of reliability. Internal monitoring capabilities give you added assurance that your Pro Series system will perform as it should, year after year.

Energy Efficiency

Advanced technology keeps Pro Series equipment operating at peak efficiency and that can mean savings every month on utility bills.

Pro Series air conditioners and heat pumps are up to **twice as efficient** as older units*

* Data Source: Energy Efficiency and Renewable Energy Network, U.S. Department of Energy. Calculations are based on every \$100 spent to cool a home using 3-ton, 10 SEER unit. Fuel rates and heating hours are based on the U.S. national average for fuel and electricity consumption. Actual costs and savings will vary depending on weather conditions, usage, location and local utility rates. This information is intended as an example for comparison purpose only.
