

An Evolution in Cleaner Indoor Air

Respicaire

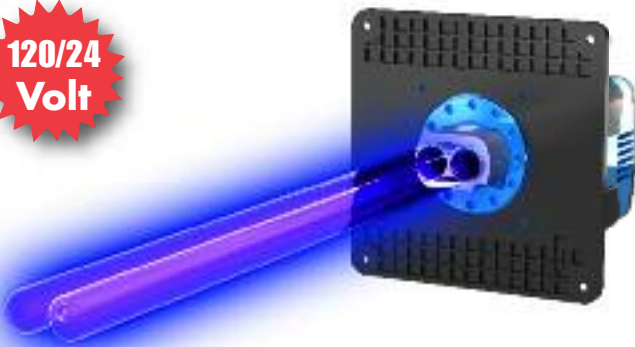

MOLDMISER MAX[®]

**Ultra Violet Germicidal
Air Treatment System**

**Take your first steps towards
Cleaner, Healthier Indoor Air**

**120/24
Volt**

Dual Processes

- **Germicidal Cleansing**
- **Parabolic Reflection**

Why Indoor Air Quality Matters to All of Us!

Indoor air environments can affect the **Health** of the people who live in them. As energy costs have risen, air tightness in our homes has increased **“trapping indoor air pollutants”**. Statistics show, we now spend a remarkable **90%*** of our lives indoors. We live, work, grow & play in artificial environments. The concern is, are they healthy? *EPA

What can the Respire MoldMiser Max® Air Treatment System do for you?

Ultra Violet UVC is particularly effective at controlling airborne pollutants like mold, virus, bacteria & microbials. First utilized by Danish Nobel laureate Dr. Niels Finsen, Ultra Violet is now used in many of our hospitals & medical centers to control airborne infectious agents. These unique, air quality devices can be installed in our own heating & cooling systems to improve the “Health of our Indoor Air”.

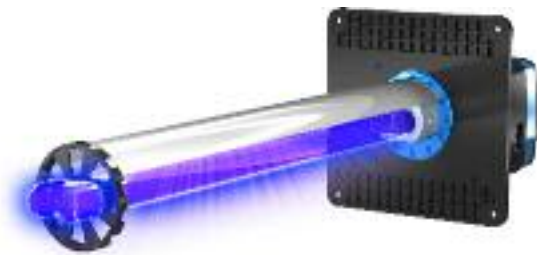

Dual Technology - The Respire MoldMiser Max® works 2 ways to purify your indoor air.

First, we electronically create wavelengths of UVC Ultra Violet light using our **GCA process - “Germicidal Cleansing Action”**. These high potency wavelengths work to **kill & control air borne microbials** by penetrating their cells. This sterilizing “GCA” process helps to **disinfect & purify our indoor air**.

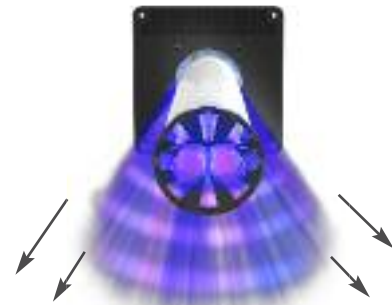

Next we add our **PRT - “Parabolic Reflective Technology”**. The MoldMiser reflective technology dramatically enhances performance by **boosting the UVC “killing” effect**. (Up to 90%) This means Dual Technology is at work to help cleanse & purify your indoor air.

(GCA) Germicidal Cleansing Action
to help cleanse & purify your indoor air.

(PRT) Parabolic Reflective Technology
to maximize air purification

UVC PURIFYING LIGHT

PARABOLIC REFLECTION
