

As Chief of the section of Andrology within the Department of Urology at Tulane Health Sciences Center in New Orleans, I am writing with great pleasure to recommend Andromedical's product for the Erectile Dysfunction Androvacuum.

Androvacuum is a Medical Device, aimed for the treatment of Erectile Dysfunction. One of the advantages of Androvacuum is that it is a hybrid device, because it is aimed for professionals, but also for personal use that permits the patient to develop a precise vacuum force of its erection as a result of therapeutic treatment of Erectile Dysfunction.

Erectile dysfunction (ED) is sexual dysfunction characterized by the inability to develop or maintain an erection of the penis during sexual performance.

In my experience with Androvacuum I found it easy to use, because it controls the force of the vacuum with a simple button. A complete anamnesis and genital exploration is needed in order to elect the most appropriate treatment for Erectile Dysfunction but Androvacuum facilitates the solution of Erectile Dysfunction.

At the end I would like to summarize that in my opinion, this device represents a technology that provides a clinically meaningful advantage over existing technology leading to a clinical improvement in the management of a very common condition such as Erectile Dysfunction which may have a profound effect on quality of life and sexuality. The availability of this device is in the best interest of patients. That is, the device provides a specific health benefit.

Therefore I strongly recommend this product for its utilization for physicians and patients affected by ED,

Yours sincerely,

Wayne Hellstrom, M.D., F.A.C.S.

Professor of Urology
