when the coordinated effort of General Dynamics and the supplier results in utilization of standard carrier containers for through movement of material and item protection is not jeopardized.

4.4.4 Reusable Containers - Reusable containers shall be utilized when proven cost effective. Recommendation for reusable containers or special design protective equipment with extended life in excess of ten (10) shipments shall be submitted for approval by the Buyer in accordance with Appendix I prior to shipment or implementation. The requirement and design of reusable containers will be reviewed by the Buyer's Packaging Engineering Section for cost savings, impact, part protection, structure integrity, breakdown features, weight, and material compliance. The Buyer will maintain the option for the manufacture of the approved container when cost effective and schedule permits. Ownership of the containers is to be vested with General Dynamics at the termination of the purchase order agreement for the retention or disposal responsibility.

4.4.5 Container Marking - All shipping containers shall be marked with permanent type ink/paint with the part number, serial number, purchase order number, bill of lading number, case number, and total number of pieces, and include any special markings as required by carrier rules and regulations that apply. Interior packages shall be identified with part number and purchase order number only. Those techniques and devices which are required to protect the item during shipment, storage, installation, or removal shall have decalcomania or name plate affixed to the item delineating the necessary precautions. Magnetic items shall have decalcomania which identify the item as being magnetic. The decalcomania shall indicate in milligauss, at fifteen feet distance, the magnetic field strength of the unpackaged component. The procedure for the measurement of the field strength of the magnetic component shall be equivalent to the test requirements of T.O. 0085-16-1. Hydraulic, fuel, and oil units including accessories, shall have a tag or decalcomania indicating the internal flushing, filling, or calibrating fluid used.

4.5 Hazardous/Dangerous Materials - Hazardous and/or dangerous materials shall be packaged, packed and marked in accordance with the applicable documents specified in paragraph 2.0 for the most restrictive mode of transportation used.

4.5.1 Classification - For explosives or other dangerous items which require Bureau of Explosive or Department of Transportation (DOT) review and approval, the Seller shall submit to the Buyer (Attention: Packaging Engineering Section of the Traffic Department) data setting forth the proper explosive and dangerous articles classification.
