#### **3D Shapes**

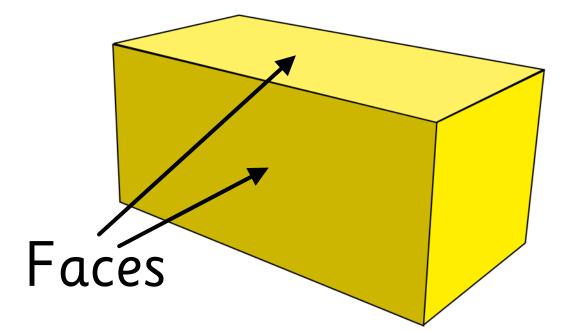

#### Every 3-dimensional shape has three measurements to describe it: **height**, **length** and **width**.

#### Faces

A face is one of the flat sides of a three-dimensional shape.

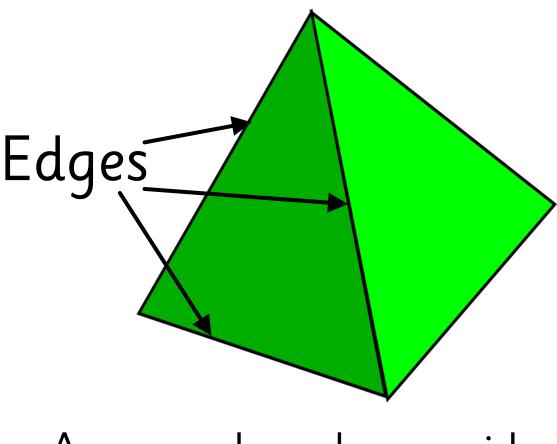

A rectangular prism has 6 flat faces. This rectangular prism has 2 square faces and 4 rectangular faces.

# Edges

# An edge is the line where two faces touch.

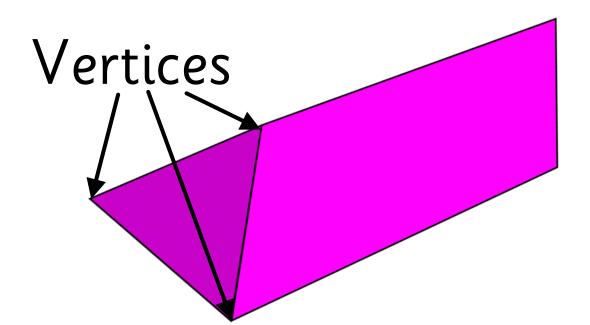

# A square-based pyramid has 8 edges.

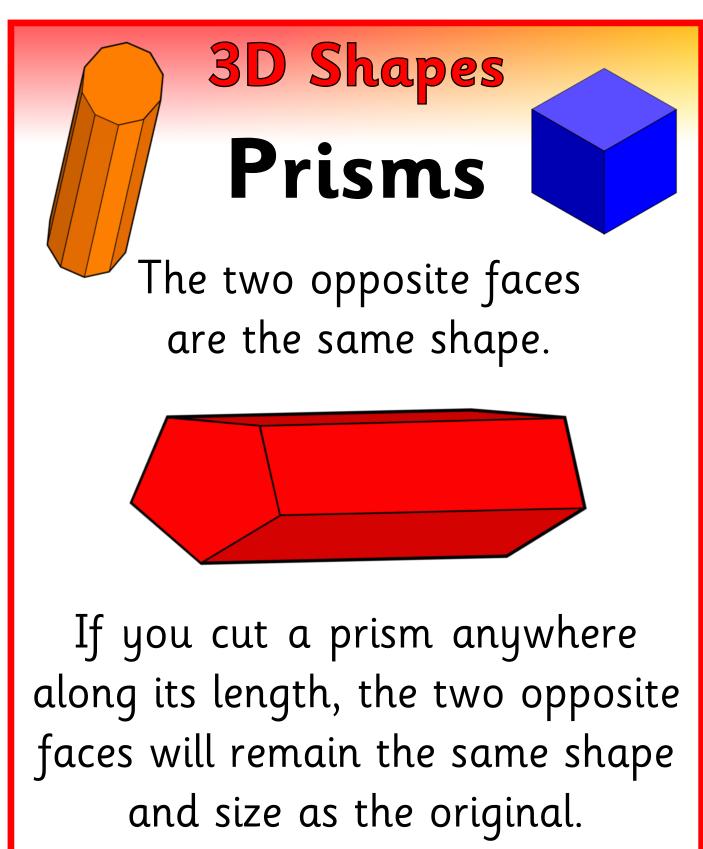

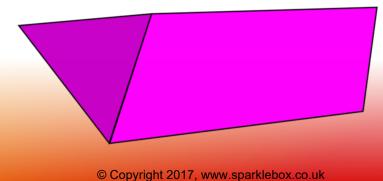

#### Vertices

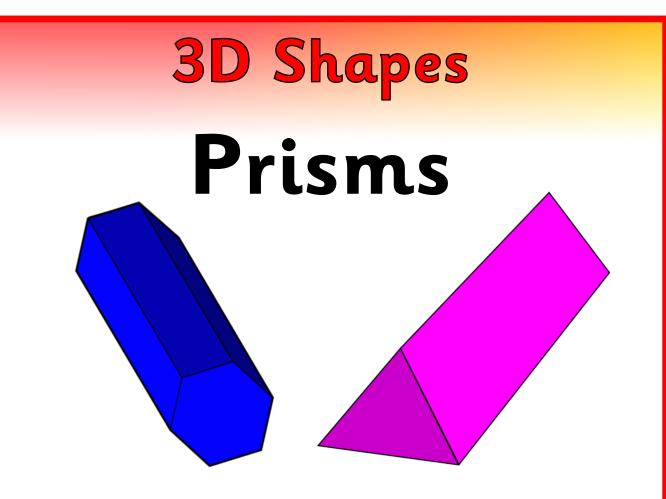

Vertices are the corners of a 3D shape, where three or more edges meet. A single corner is called a **vertex**.

A triangular prism has 6 vertices.

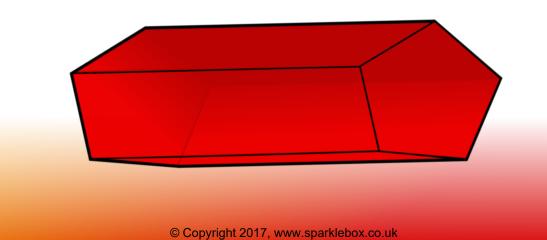

# A prism always has the same shape at either end.

A prism will always have rectangular faces on the sides.

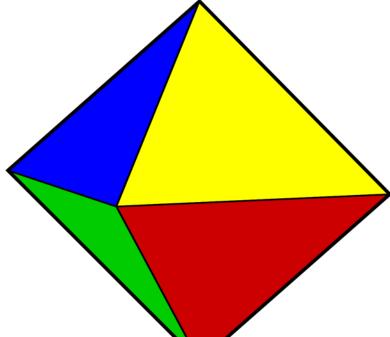

## 3D Shapes Polyhedrons

Polyhedron is a 3D shape with flat faces and straight edges.

A **regular polyhedron** is a 3D shape with all the faces the same shape.

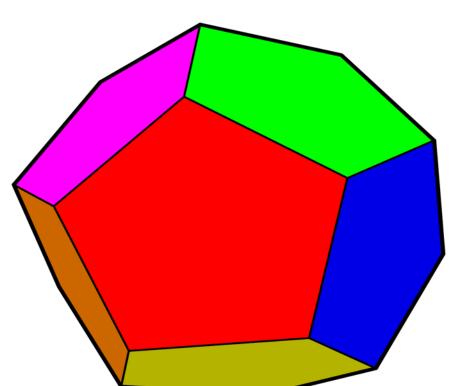

# **3D Shapes** Tetrahedrons This is a **tetrahedron**. It is a regular polyhedron. Its 4 faces are all equilateral triangles.

## **3D Shapes Octahedrons** This is an **octahedron**. It is a regular polyhedron.

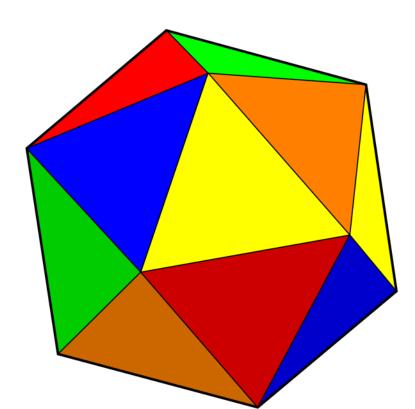

# Its 8 faces are all equilateral triangles.

### **3D Shapes Dodecahedrons** This is a **dodecahedron**. It is a regular polyhedron.

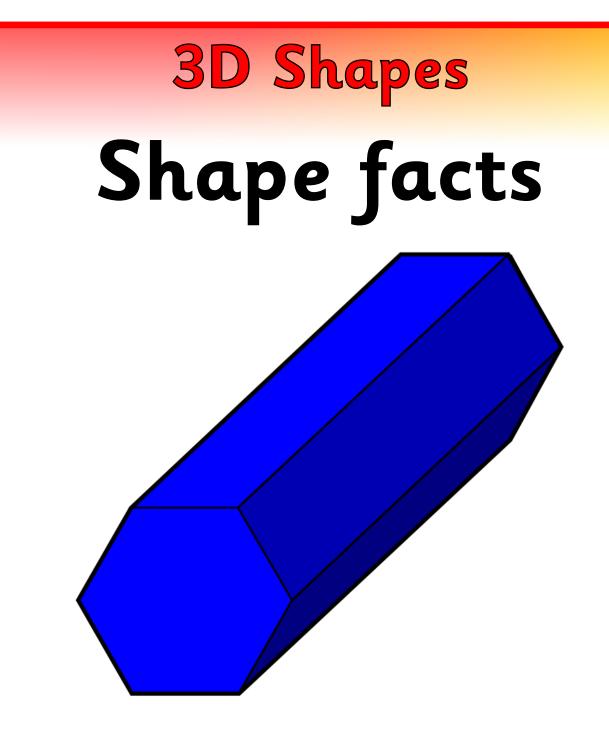

# Its 12 faces are all regular pentagons.

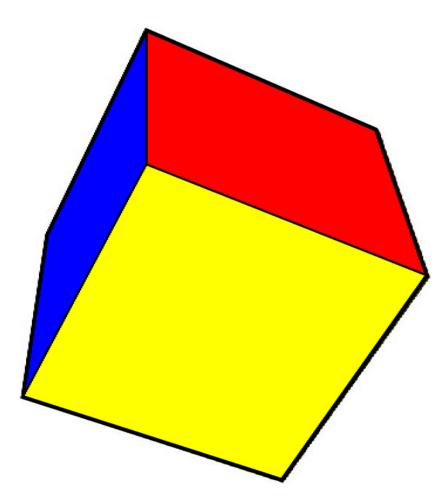

### **3D Shapes Icosahedrons** This is an **icosahedron**. It is a regular polyhedron.

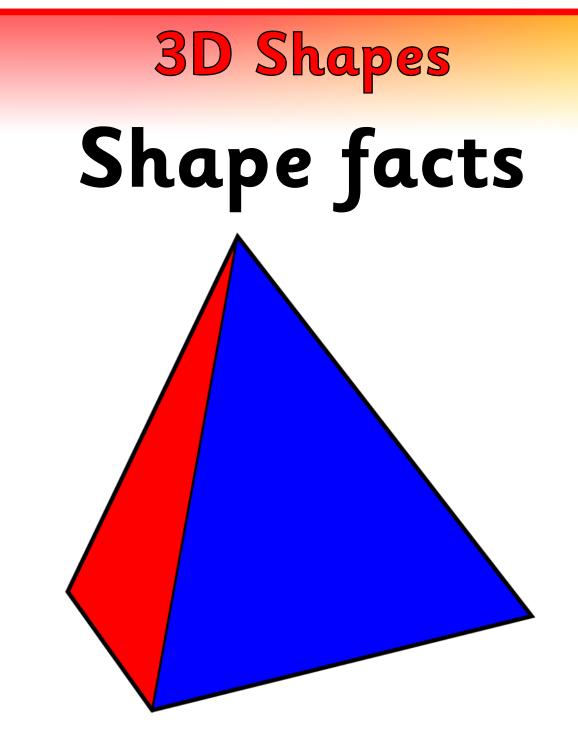

# Its 20 faces are all equilateral triangles.

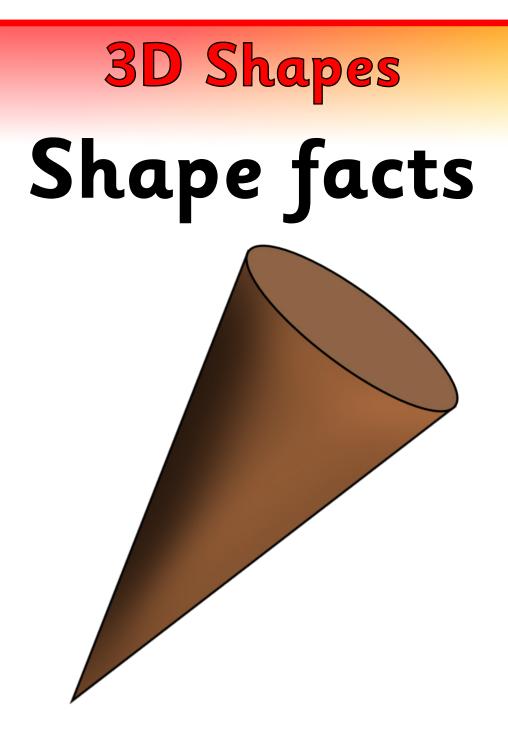

### 3D Shapes Shape facts

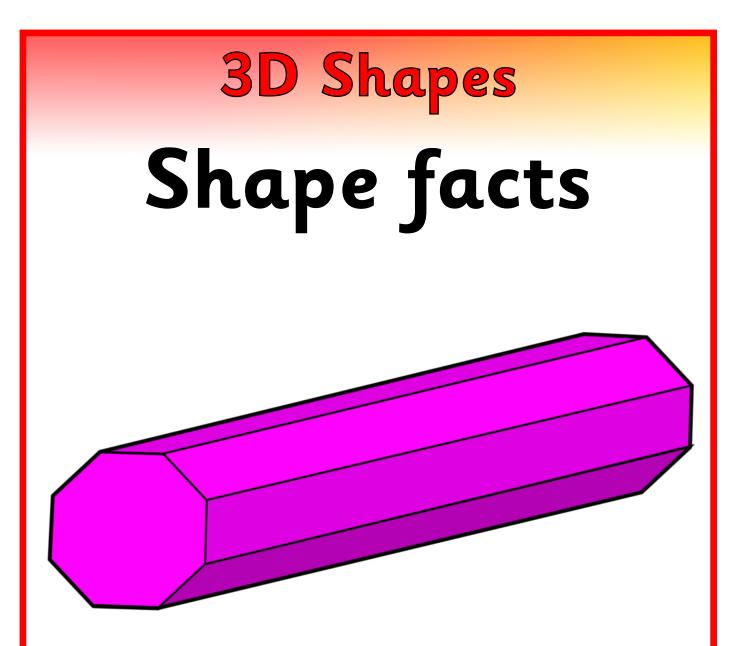

What type of polyhedron is this? Which 2D shapes make up its faces? How many vertices does it have? How many faces does it have?

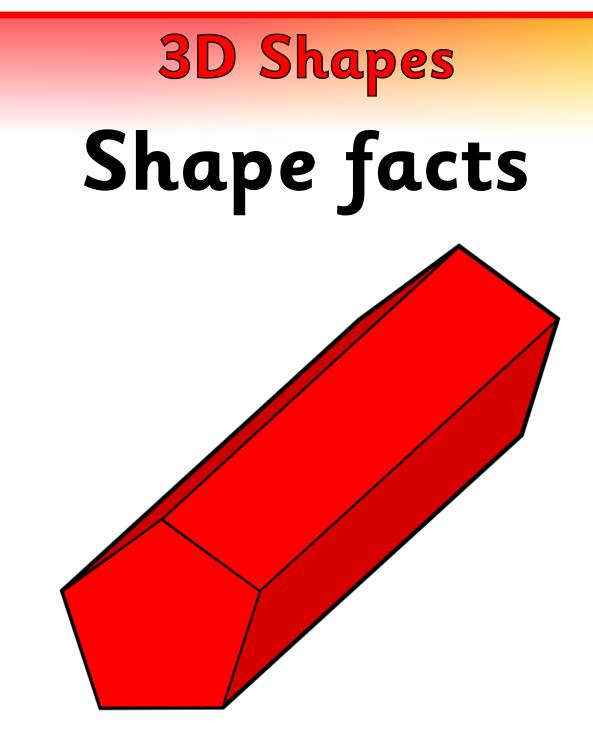

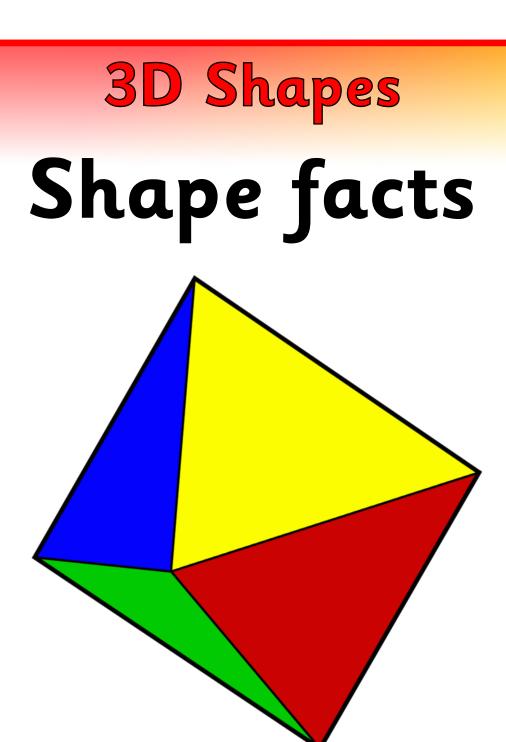

What type of polyhedron is this? Which 2D shapes make up its faces? How many vertices does it have? How many faces does it have?

What is this shape's name? Which 2D shape is at its end? How many vertices does it have? How many faces does it have?

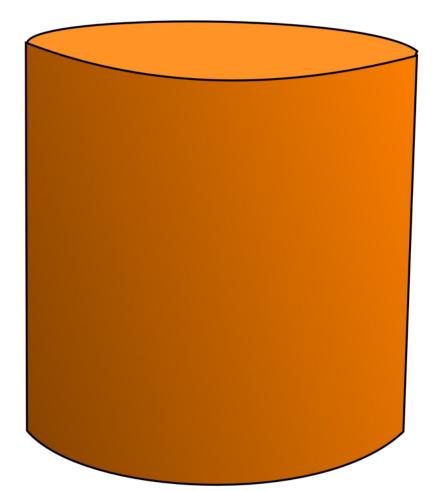

What type of polyhedron is this? Which 2D shapes make up its faces? How many vertices does it have? How many faces does it have?
