

Can you use playdough to show the life cycle of a seed?

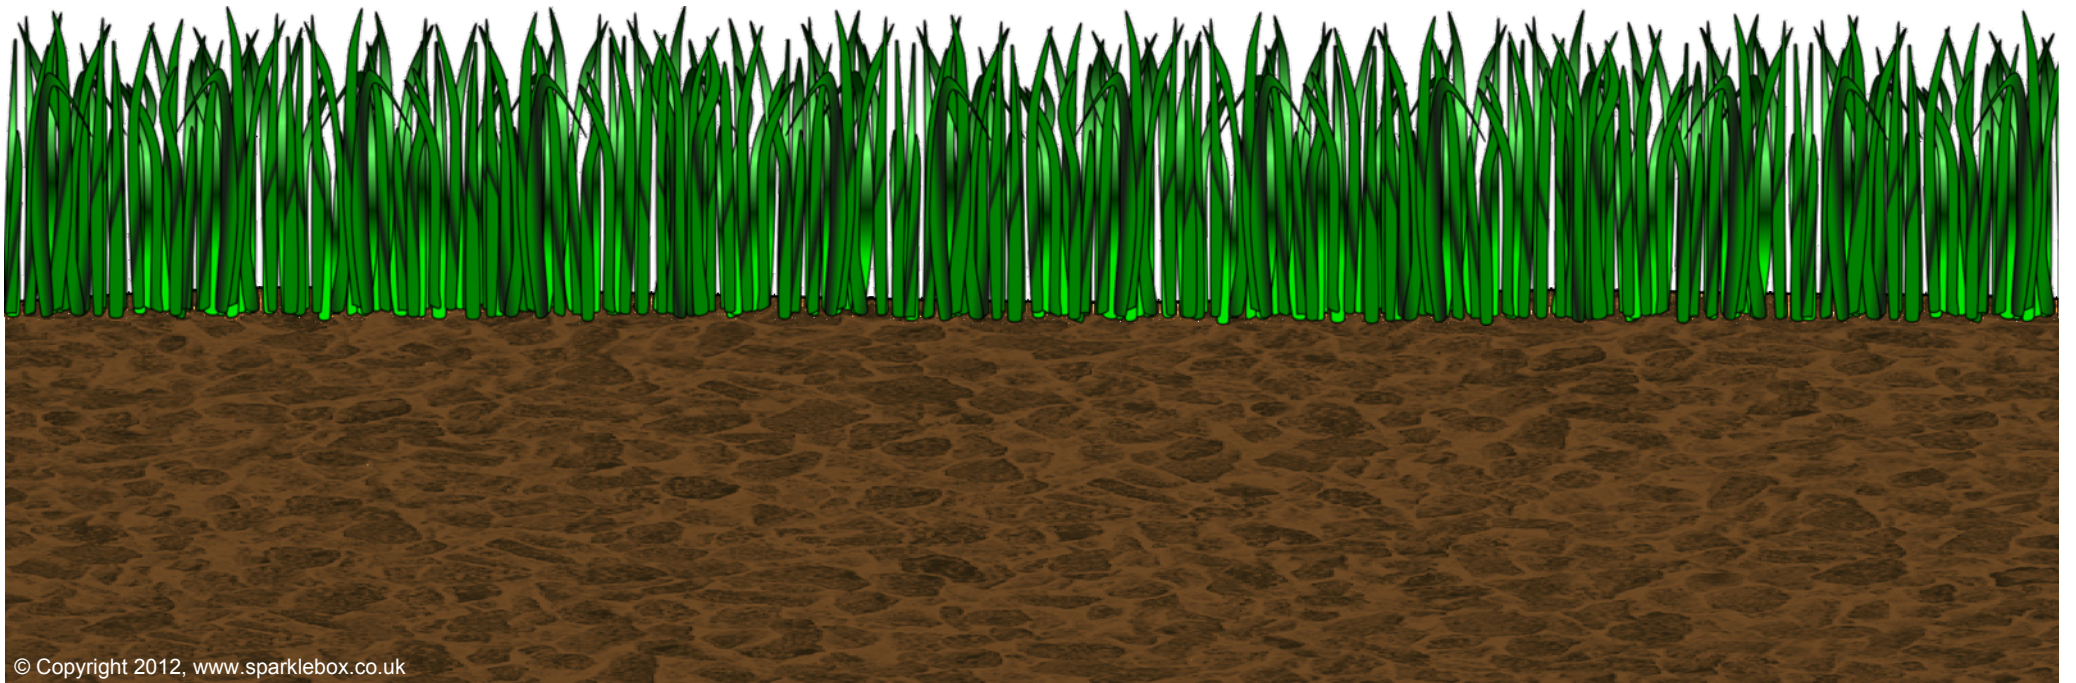

**Can you use playdough to show
the life cycle of a seed?**

1 A seed falls to the ground and is buried in the soil.

2 The seed germinates and roots begin to push down.

3

A shoot grows from the seed and appears above ground.

4

The shoot grows taller and leaves appear.

5 The plant produces a bud which opens into a flower.

6 After flowering, new seeds fall or are carried back to the ground.
