

December 2015

Improve our world by empowering entrepreneurs - that is the goal of MyMicroInvest in the development of our economy.

We live in an extraordinary land, one in which men and women all over the world work every day, combining their know-how and joining forces to live in peace with one another and look after the planet.

However this planet, in full development, faces difficult challenges. To take on these challenges, thousands of entrepreneurs launch and develop innovative projects every day that help better our lifestyles, in areas such as health, environment, education, new technologies and social or economic development, to name but a few.

To empower these entrepreneurs, passionate but professional men and women privately invest (Business Angels) or invest through structured funds (private equity) in these innovative enterprises. But this isn't enough!

MyMicroInvest, one of the European crowdfunding **pioneer**, allows the largest crowd to take part in these innovations. It enables everyone to invest in these wonderful business projects and contribute to their development. Together we can develop the innovations that make our world better by investing in tomorrow's economy.

MyMicroInvest economic model is based on this new collaborative economy. How? By providing open access to financing for entrepreneurs and attractive placement for investors.

However, to reach its goal, MyMicroInvest counts on its talented team who strives for **excellence** and shares in the sense of entrepreneurship. Our belief? For a project to be long-lasting, it must also be profitable.

Right now, the entire MyMicroInvest team wishes to share the development of this project with you by allowing you to invest in our company's capital so that together we may accomplish this goal and share in its success. **Sharing success** is one of the key values at MyMicroInvest.

2016 will be the turning point from the old-fashioned style of financing to a more modern and participative style.

Olivier de Duve
CEO of MyMicroInvest
