

The Association for the Advancement
Of Sustainability in Higher Education
2401 Walnut Street Suite 102
Philadelphia, PA 19103

Members of the STARS Steering Committee,

Santa Rosa Junior College (SRJC) proudly submits the campus's first Sustainability Tracking, Assessment and Rating System (STARS) report to the Association for Advancement of Sustainability in Higher Education (AASHE).

Since the inclusion of Goal E, to establish a strong culture of sustainability, in the college's 2014 Strategic Plan, the college includes sustainability as a consideration in all matters, from the utilization of paperless forms to the use of sustainable materials in building new structures. In order to achieve the specific goals of the Strategic Plan, the college has used STARS as a way to measure the progress being made throughout its five teaching sites.

The data collected for this report has enabled the college to view its current sustainability efforts and status in a manner that has not been possible in prior years. This report has also enabled a more in-depth discussion on areas where the college's sustainability efforts could be improved and areas that need simply need continued progress.

The information collected for this submission has been gathered systematically from all appropriate sources, and was reviewed and verified by the SRJC Energy and Sustainability Manager along with the college's Sustainability Committee.

Sincerely,

A handwritten signature in blue ink, appearing to read "Frank Chong", is written over a large, light blue circular scribble.

Frank Chong, Ed.D.
Superintendent/President
Santa Rosa Junior College
