To Whom It May Concern:

VCU has installed four L2 Electric Vehicle (EV) charging stations, two on the Monroe Park Campus and two on the MCV Campus. These EV charging stations are unique in that (1) they were the first electric vehicle charging stations installed at a university in Virginia and (2) when installed, they doubled the number of L2 EV charging stations in the Commonwealth of Virginia.

With this installation, VCU hopes to encourage students, staff, and community members to employ alternative means of transportation, such as electric vehicles. The charging stations were installed in both a student parking deck and a faculty and staff parking deck, so they would be visible and used by all members of the VCU community.

A handwritten signature in blue ink, appearing to read 'Carl Beckelheimer', with a long, sweeping underline.
