The Westminster College Grounds and Landscape Management Group strives to minimize the use of chemicals, insecticides and other invasive procedures in the control of pests, and employs this Integrated Pest Management (IPM) Plan to that end. Core principles of the Westminster IPM Plan are:

- Managing to acceptable pest levels (control not eradication of pests)
- Monitoring of pest populations
- Employing biological and mechanical controls on pest populations responsibly
- Using the least-toxic chemical pesticides
- Minimum use of chemicals – used only as needed
- Plans to assist and educate students in the event of a pest issue
- Use of chemicals only in specified locations and only for the targeted species

This Plan is Approved by:

Richard A. Brockmyer

Managing Director of Plant and Facilities Operations

Westminster College
