

March 6th, 2021

To whom it may concern,

I am writing to affirm the review process for AASHE STARS at Lane Community College. During the process I reviewed the data entered into the STARS database by the Team members from the Institute of Sustainable Practices. As a faculty member in Earth and Environmental Science I did not take part in the documentation or input of information. Each week for the past six weeks I would review a section of the template and make comments based on my interpretation of the entered data for each credit that Lane is pursuing. The team and I discussed the items under question in the template each week. Following a first review of each section we proceeded with a second review for any credits that required revision and then performed a final review where each credit was checked for completion.

Sincerely,

A handwritten signature in black ink, appearing to read "Richard Glover", written in a cursive style.
