To Whom It May Concern:

The Pew Charitable Trusts has been working with FarmLogix since it launched its Farm to School program for Chicago Public Schools in 2013. Since that time, FarmLogix has become a leader in moving sustainable meat and poultry products into k-12 schools and other large institutions.

FarmLogix has built up a significant network of sustainable and antibiotic-free meat producers that are accessible via the company's website database. This infrastructure allows institutions to quickly see where their food is coming from and educate their customers on how it was produced.

In addition to providing sustainable products and comprehensive information to its clients, FarmLogix is a great asset to small farms, helping grow their businesses by connecting them with institutions and handling the often complicated shipping logistics. Without FarmLogix's assistance, most of these farmers would not be able to sell to such large institutions, a reliable and potentially significant revenue stream.

On a monthly basis, FarmLogix sends us a report of their sales to institutions, broken down by meat type, farm, and buyer. It is comprehensive and concise, and gives us a true picture of the work.

Since they entered the school and institutional market in 2013, they have moved more than \$1.2 million worth of sustainable proteins raised without routine antibiotic use, making them a true resource for Pew.

I am happy to discuss further if questions arise.

Sincerely,

Laura Rogers
Director, Human Health and Industrial Farming
