Other
Don't think climate change & global warming are interchangeable
Naturally would change. However, the human activities of 'modernity' is increasing the velocity of climate change.
Naturally climate change would happen. However with the human activities by the 'modernity' accelerate too much the process
A natural cycle, but catalyzed and made worse in its effects by industrialization
Caused by human activity with natural variability playing a role.
Cyclical change in temperature that is enhanced and accelerated by human activity
Both
The climate has continually changed because our planet is a dynamic system.
Natural occurrence that is being sped up by human activity
both
Both
global warming is natural, as the opposing force to global cooling, Earth cycles between warming and cooling stages on the surface. Statistically speaking it is much easier to break a warming trend than it is to break a cooling trend once it starts to become extreme. An ice age is much more detrimental to the environment than an extremely hot trend.
