UNIVERSITY OF THE PACIFIC

Sustainability Walking Tour

1 DeRosa University Center

This is one of three LEED®-certified buildings on campus. Bon Appétit, Pacific's food service vendor, has put forth multiple sustainability initiatives, going straw-free, tray-free, Farm-to-Fork, and using compostable serviceware. The Tiger To-Go program offers reusable clamshells and coffee cups to reduce waste and save money.

2 Library

Minimizing landfill waste is an important initiative at Pacific. Green team helps reduce waste at events and infrastructure like the 3-bin, centralized waste stations in the William Knox Holt Memorial Library help people sort correctly keeping recyclable and compostable items out of landfills.

3 Kitchen Co-op

Pacificans can rent this fully equipped kitchen and gathering space. The Co-op was established in 2014 as a collaborative project between Housing, PacWell, Sustaining Pacific, and Bon Appétit, to give the Pacific community, especially students without kitchens, a space to prepare individual or community meals.

4 Wendell Phillips Center

The Pacific Food Pantry, room 98, provides students facing food insecurity with non-perishable food and fresh Robb Garden produce. Sustaining Pacific and the John Muir Center share room 99. Students can visit to learn more about student-led sustainability initiatives and events such as Green Team and the University's connection to John Muir.

5 Transportation

This campus has several Zipcars for students, faculty and staff (18 or older) to reserve and use. Zipcar is a safe, easy and money-saving alternative to having a personal car on campus. DIBs is an online service that connects commuters with potential carpoolers, provides resources for bicycle commuters and offers a free emergency ride home to smart commuters.

6 Pacific Gardens

The Ted and Chris Robb Garden offers opportunities for students, staff, faculty, and the Stockton community to learn how to garden more sustainably. Produce is grown using Grow Biointensive principles and is utilized at the Pacific Food Pantry. The garden is open weekdays 9am - 5pm for all to walk through. If you see a gardener feel free to ask them questions!

The Bon Appétit Native Garden showcases California native plants and rock specimens (mostly from northern California). These plants grow well in the Central Valley, typically require less water than ornamentals and support native wildlife. Pacific faculty selected the original 70+ plant varieties and rock samples.

7 Geosciences Center

The Geosciences Center is home to the Kautz mineral collection and is the campus hub for students pursuing a bachelor's degree in geological and environmental sciences. Sustainability is also integrated in other disciplines. For example, College of the Pacific offers an Environmental Studies minor and the School of Engineering and Computer Science offers a Sustainability minor.

8 Muir Botanic Area

This area is full of flora mentioned in John Muir's writings. It was designed in coordination with Jeannette Powell as a collaborative space for Powell Scholars in 2011, and transformed underutilized, high-maintenance lawn to greenspace connecting Pacificans to Muir's legacy.

9 Baun Fitness

The campus gym provides equipment and resources for physical and mental health. In 2018 zero electricity treadmills were introduced. Funded by the Sustainability Project Investment Fund (SPIF), the treadmills are helping to reduce Pacific's carbon footprint. SPIF supports projects that contribute to advancing sustainability-focused practices and learning opportunities at Pacific.

10 Calaveras River

Prior to the first contact with outsiders in the late 1700s, Native Americans had a peaceful and abundant life along the waterway. A large village was formally in this area, inhabited by various Yokut tribelets, including the Passasimas and Nototomne.

11 Mailroom

The mailroom is collection point for many difficult to dispose of items. Small e-waste items, batteries, shipping materials, empty printer cartridges and documents in need of shredding may all be dropped here for safe disposal or reuse.

12 Physical Plant

Many sustainability initiatives are developed and implemented by staff based in this building which houses Physical Plant, Construction Management and Sustainability. Sustaining Pacific works to promote sustainability in campus operations, practice and education.
