

Waste Innovations

STARS

- Fanshawe can compost when London as a city does not. We can accept a larger variety of compost items: paper cups, napkins, paper food waste.
 - This compost is then turned into biofuel to power the college's energy needs.
- Waste bins are designed and mounted in such a way that custodial staff are able to still efficiently clean Fanshawe's floors.
- Waste bin signage (wrappers and posters) designed by Media students.
- Bin wrappers are designed by Public Relations and Communication students.
- Sensors are installed in compactors which sends notifications when bins are full. This has reduced the number of pickups.
