To Whom It May Concern,

Re: Nova Scotia Community College- Innovation Credit for STARS: The Centre for the Built Environment

Barrie & Langille Architects Ltd. partnered with Moriyama & Teshima Architects to design the Centre for the Built Environment. We have worked with the NSCC for many years and this project has been an ongoing and living demonstration of trades and sustainable technologies.

The CBE, in its practice and its pedagogy, promotes environmental healing and demonstrates emerging concepts and approaches that will help to inspire the future champions of sustainable development within our industries and our communities. The planning and design of the project is open-ended and adaptive to change so that, as a living building that has the capacity to learn and evolve over time. The building and its infrastructure perform as instruments of the curriculum, serving as interactive tools in an educational sandbox for exploration and demonstration of viable construction approaches and solutions, and of their operational implications.

If you have any further questions about the Centre for the Built Environment please feel free to contact myself or Michael Chapman of NSCC.

Sincerely,

Richard Langille

President

Barrie & Langille Architects Ltd.
