Additional Information

Not all credit courses/programs are in the curriculum database. Program information is entered as they are received through the Curriculum Unit.

The database also contains programs currently "under development."

The database includes some Business Development offerings:

Some offerings are open to the public and curriculum is published on OurNSCC.

Some offerings are industry/employer-specific and some of that curriculum is published on OurNSCC v curriculum is provided directly to the specific school offering the program.

The two **Marine Technology (Engineering/Navigation)** programs are currently undergoing extensive did not include them. Both are transitioning from a three-year to a four-year format duration commencing 2013. Students previously enrolled in the three-year programs will continue the program under the previously published curriculum.

Occupational Health and Safety is included but I received recent changes which still require process these changes and based on what I see, the information provided in this spreadsheet will change.

Curriculum publishing has been delayed for all 3 **Aircraft Maintenance Engineer** programs and therefore not included.

Electives appear under "Pseudo Programs" and are separate from programs. I.e. Applied Arts Elective Electives, COGS Electives, etc.
