

Teaching Climate Change in Any Classroom (Hosted In Person at the CAT)

No matter your field of study, you - and your students - have an important role in the climate conversation. Research shows that current and incoming students are looking to us to help guide them towards finding success within their selected professions given the backdrop of a changing climate. Join CAT as we examine how best to prepare our students for an uncertain future within the scope of existing curricula. No matter what you teach, you can incorporate climate change into your classroom in a way that is engaging and empowering!

Guest Facilitators: Marissa Cloutier, Assistant Professor, Social & Behavioral Sciences, CPH; Rebecca Collins, Director of Sustainability, Temple University
