RE: OP-9: Landscape Management

To Whom It May Concern,

CNM does not use pest control services on the campus landscape as a regular practice. There has been only one outbreak of a pests in 14 years (box worm) that was limited to a small area around the parking lot on main campus. The grounds crew first applied environmentally friendly soap spray, but it did not mitigate the issue, so they then applied Dawn Dish Detergent. Again, this was the only instance in 14 years that any form of pest control was applied to the CNM campus landscapes. The Maintenance Department also does not apply fertilizers to the landscape.

Thank you,

Anthony Rael
