RE: Innovation Credit Review: Energy Matters Peak Demand Mobile App
At Indiana University - Bloomington

Dear AASHE,

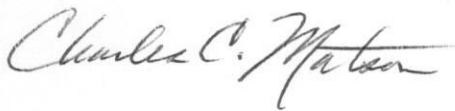

My name is Charles C. Matson and I recently retired from my role at Indiana University as a Special Projects Engineer, the last 18 of which were focused on energy conservation. I was also a Certified Energy Manager.

I have reviewed the Innovation Credit for the Energy Matters Peak Demand Mobile App proposed by Indiana University Bloomington. This innovative software utilizes the electronic meters of major campus buildings to raise awareness of peak demand and provide information to occupants about actions they can take to avoid peak. This project makes so much sense for a university campus where all students and much of the faculty and staff work in different buildings throughout each week. This app will definitely increase the feedback to our building representatives and HVAC mechanics when and where there are symptoms of energy waste to eliminate.

I affirm that this software developed by Indiana University staff is innovative and that it meets the AASHE STARS 2.0 criteria for an Innovation credit.

Thank you for your consideration.

Sincerely,

Charles Matson

Indiana University Special Projects Engineer, Retired
