Re: Selkirk College STARS Report Submission

To whom it may concern:

Selkirk College is proud to submit our second Sustainability Tracking Assessment and Rating System (STARS) report to the Association for Advancement of Sustainability in Higher Education.

Selkirk College is committed to reducing its ecological footprint and creating a culture of sustainability among the campus community. We aim to continue to embrace practices that promote a healthy natural environment; into student learning, administration, facilities and operations, workforce development, funding allocations and applied research priorities. We are committed to developing and supporting college-wide and regional solutions to mitigate and adapt to climate change.

Completing the STARS report has been an educational and rewarding exercise for Selkirk College and it contributes to an ongoing multi-campus effort to learn about, evaluate, and report on our sustainability achievements. STARS has been an effective process for identifying areas in which Selkirk College sustainability initiatives are thriving and areas that require further attention. We will be using the findings from the STARS report to guide our ongoing work towards environmental sustainability.

This submission was prepared by Selkirk College's Sustainability Coordinator with support from the Sustainability Committee. I confirm that the contents of this submission is complete and correct to the best of our knowledge and ability at this time.

Sincerely,

Angus Graeme
President & CEO
