To Whom It May Concern:

The information compiled for the Association for the Advancement of Sustainability in Higher Education's Sustainable Tracking, Assessment & Rating System 2018 report has been checked for accurate representation of the Emerson College campus. The report was assembled by the Sustainability Coordinator over the course of three months, with faculty and staff across the campus providing data for the report.

The report serves as an opportunity to assess where Emerson College stands in comparison to our historical profile and to other campuses. Additionally, the report creates a dialogue between different departments of the College around sustainability.

Emerson College has maintained a commitment to sustainability since 2007, when the former President Liebergott signed onto the American College and University Carbon Commitment. In fall 2016, I expanded this commitment by signing onto the Climate Commitment to incorporate resiliency planning and community building into our climate mitigation and adaptation efforts.

Emerson College prides itself in having one of the first LEED certified higher education building in Massachusetts and purchasing renewable energy credits equal to more than one-hundred percent of our electricity consumption for the past five years.

Please do not hesitate to reach out with any questions for the included material. We look forward to continuing our participation in this important work.

Signed,

---

Lee Pelton  
President
