Association for the Advancement of  
Sustainability in Higher Education

To Whom It May Concern:

The installation of retrofitted drinking fountains to accommodate refillable water bottles is innovative from the perspective of altering the existing mechanics to reduce both the needless transportation of bottled water and lessen the environmental impact of producing plastic water bottles. The LED readout is an added feature to monitor the program's impact.

Sincerely,

Bart A. Bartels  
Project Manager  
Sustainable Community Development Initiative  
Grand Valley State University
