

WHAT TO KNOW ABOUT ASYMPTOMATIC STIs:

- Most STIs are ASYMPTOMATIC
 - This means you don't show any physical symptoms so you have no way of knowing if you are carrying something
 - You can pass something on to someone else without knowing
 - This is why testing is so important- that way you can know your status and get treatment if necessary
 - For people who are regularly sexually active, it is recommended you get tested every 3 months
