62.4

Your website score

Review of **ceoblognation.com**

Generated on 2017-02-23

Introduction

This report provides a review of the key factors that influence the SEO and usability of your website.

The homepage rank is a grade on a 100-point scale that represents your Internet Marketing Effectiveness. The algorithm is based on 70 criteria including search engine data, website structure, site performance and others. A rank lower than 40 means that there are a lot of areas to improve. A rank above 70 is a good mark and means that your website is probably well optimized.

Internal pages are ranked on a scale of A+ through E and are based on an analysis of nearly 30 criteria.

Our reports provide actionable advice to improve a site's business objectives.

This is a representation of what your Title Tag and Meta Description will look like in Google search results.

Search engines may create their own titles and descriptions if they are missing, poorly written and/or not relevant to the content on the page and cut short if they go over the character limit. So it's important to be clear, concise and within the suggested character limit.

Headings
<H1>	<H2>	<H3>	<H4>	<H5>

and **8** more.

HTML header tags (or simply header tags) differentiate between headings, subheadings and the rest of the content on the page.

Your website either does not currently use HTML header tags or is using too many. Use keywords in your headings with your most important keywords in the top level and be sure to maintain the <H1> to <H6> hierarchy.

While it is important to ensure every page has an <H1> tag, only include more than one per page if you're using HTML5. Instead, use multiple <H2> - <H6> tags.

This Keyword Cloud provides an insight into the frequency of keyword usage within the page.

It's important to carry out keyword research to get an understanding of the keywords that your audience is using. There are a number of keyword research tools available online to help you choose which keywords to target.

Keyword Consistency

◎ ◎ ◎   ⚙ ⚙ ⚙
	Keywords	Freq	Title	Desc	<H>
★★★	CBNation	5	✗	✗	✓
★★★	CEO	4	✓	✓	✓
★★★	entrepreneurs	4	✗	✓	✓
★★★	Blue	4	✗	✗	✓
★★★	Blogging	4	✗	✗	✓

	Keywords (2 words)	Freq	Title	Desc	<H>
★★★	Blue 16	4	✗	✗	✓
★★★	business owners	3	✗	✓	✗
★★★	16 Corner	2	✗	✗	✓
★★★	business blogging	2	✗	✗	✓
★★★	Digital Marketing	2	✗	✗	✓

Keyword consistency is the use of keywords throughout the different elements of the webpage. Consistent keyword use helps crawlers index your site and determine relevancy to search queries.

The table above highlights the most frequently used keywords on your page and how consistently you're using them.

Alt Attribute

◎ ◎ ◎   ⚙ ⚙ ⚙

We found **10** images on this web page.

4 ALT attributes are empty or missing.

https://www.ceoblognation.com/wp-content/uploads/2016/04/logo_small-300x110.png

https://www.ceoblognation.com/wp-content/plugins/revslider/admin/assets/images/dummy.png

http://blue16media.com/wp-content/uploads/2015/09/16.png

https://www.ceoblognation.com/wp-content/uploads/2016/08/The-Blue-16-Corner.jpg

Alternative text allows you to add a description to an image. Since search engine crawlers cannot see images, they rely on alternative text attributes to determine relevance to a search query. Alternative text also helps makes an image more likely to appear in a Google image search and is used by screen readers to provide context for visually impaired users.

It looks like most or all of your images have alternative text. Check the images on your website to make sure accurate and relevant alternative text is specified for each image on the page. Try to minimize the number of alt text characters to 150 or less (including spaces!) to optimize page load times.

In-Page Links

We found a total of 35 link(s) including 0 link(s) to files
- External Links: NoFollow (0%)
- External Links: Follow (6.8%)
- Internal Links (93.2%)

Anchor	Type	Follow
No Anchor Text	External Links	Follow
No Anchor Text	External Links	Follow
No Anchor Text	External Links	Follow
Blue 16 Media	External Links	Follow
Powered by Blue 16 Media	External Links	Follow
Secured by Godaddy	External Links	Follow

and **29** more.

Links pass value from one page to another. This value is called 'link juice'.

A page's link juice is split between all the links on that page so lots of unnecessary links on a page will dilute the value attributed to each link. There's no exact number of links to include on a page but best practice is to keep it under 200.

Using the Nofollow attribute in your links prevents some link juice, but these links are still taken into account when calculating the value that is passed through each link, so using lots of NoFollow links can still dilute PageRank.

Broken links

No broken links were found on this web page

Broken links send users to non-existent web pages. They hurt a site's usability and reputation, which impacts SEO.

Fortunately your page doesn't contain any broken links.

Be proactive in checking your pages to make sure they don't have any broken links.

Robots.txt

https://www.ceoblognation.com/robots.txt

A robots.txt file allows you to restrict the access of search engine crawlers to prevent them from accessing specific pages or directories. They also point the web crawler to your page's XML sitemap file.

Your site currently has a robot.txt file. You can use Google Search Console's Robots.txt Tester to submit and test your robot.txt file and to make sure Googlebot isn't crawling any restricted files.

Blue 16 Media - Website Review

XML Sitemap

https://www.ceoblognation.com/sitemap.xml

https://www.ceoblognation.com/sitemap_index.xml

XML sitemaps contain the list of your URLs that are available to index and allow the search engines to read your pages more intelligently. They can also include information like your site's latest updates, frequency of changes and the importance of URLs.

Be sure to only include the pages you want search engines to crawl, so leave out any that have been blocked in a robots.txt file. Avoid using any URLs that cause redirects or error codes and be sure to be consistent in using your preferred URLs (with or without www.), correct protocols (http vs. https) and trailing slashes. You should also use your robots.txt file to point search engine crawlers to the location of your sitemap.

URL Parameters

Good, the URLs look clean.

URL parameters are used to track user behaviors on site (session IDs), traffic sources (referrer IDs) or to give users control over the content on the page (sorting and filtering). The issue with URL parameters is that Google sees each unique parameter value as a new URL hosting the same thing - meaning you could have a duplicate content problem. Sometimes, it's able to recognize these URLs and group them together. It then algorithmically decides which URL is the best representation of the group and uses it to consolidate ranking signals and display in search results. You can help Google recognize the best URL by using the rel="canonical" tag.

Use the URL Parameters Tool in Google Search Console to tell Google how your URL parameters affect page content and how to to crawl URLs with parameters. Use this tool very carefully - you can easily prevent Google from crawling pages you want indexed through overly restrictive crawling settings, especially if you have URLs with multiple parameters.

Underscores in the URLs

Great, you are not using underscores (these_are_underscores) in your URLs.

Great, you aren't using underscores (these_are_underscores) in your URLs.

Google sees hyphens as word separators while underscores aren't recognized. So the search engine sees www.example.com/green_dress as www.example.com/greendress. The bots will have a hard time determining this URL's relevance to a keyword.

Blocking Factors

✔ **Flash:** No
✔ **Frames:** No

Great, you aren't using Flash or frames on your site.

While it often looks nicer, Flash content can't be properly indexed by search engines. Maximize your SEO efforts by avoiding Flash.

Search engines also have problems with frames because they can't crawl or index the content within them. Avoid them if you can and use a NoFrames tag when you can't.

## Domain Registration

◎ ◎ ◎   ⚙ ⚙ ⚙

✔ Created 6 years ago

✔ Expires in 3 years

> Your domain is the human-readable address of your website on the Internet. How long your domain name has been registered does have a limited impact on your rankings in search results. The newer your domain the harder it can be to achieve a higher rank. To help offset this, consider buying a second-hand domain name.
>
> Do you know that you can register your domain for up to 10 years? By doing so, you will show the world that you are serious about your business.

>
> Resource: Use tools to learn more about your competitors' web marketing strategies.

blue **16** MEDIA

Mobile

✅ **Mobile-friendliness**

◎ ◎ ◎   ⚙ ⚙ ⚙

| Very Good |

This web page is super optimized for Mobile Visitors

> Mobile friendly websites make it easy for users to complete objectives and common tasks and use a design or template that is consistent across all devices (uses responsive web design).
>
> Your site is well configured for mobile users.

◑ **Mobile Rendering**
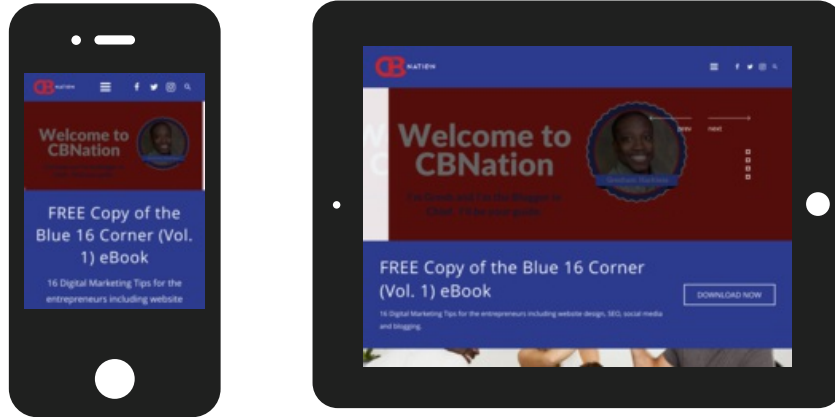

80% of adult Internet users now have a smartphone. You should definitely be optimizing your website to render on the most popular mobile devices.

⚠ **Touchscreen Readiness**

◎ ◎ ◎   ⚙ ⚙ ⚙

Make the most important buttons/links large enough to be tapped easily.

> Touchscreen readiness is an important aspect of your site's mobile friendliness. Your tap targets should be at least a 48 pixels in height and width with at least 32 pixels of extra space on all sides. You can further improve your User Interface by adding size and density buckets to accommodate varying device sizes and screen densities.

✅ **Mobile Compatibility**

◎ ◎ ◎   ⚙ ⚙ ⚙

Perfect, no embedded objects detected.

> Great, your website does not embed any special types of web content, such as Flash, Silverlight or Java, so your content can be accessed on all devices.

✅ **Font Size Legibility**

◎ ◎ ◎   ⚙ ⚙ ⚙

Perfect, this web page's text is legible on mobile devices.
> You can find additional font recommendations for mobile devices in Google's typography guidelines for Android.

Mobile Viewport
✔ Great, a configured viewport is present.

✔ The content fits within the specified viewport size.

> Great, the viewport is well configured.
>
> Keep in mind that since the width (in CSS pixels) of the viewport may vary, your page content should not solely rely on a particular viewport width to render well. Consider these additional tips:
> - Avoid setting large absolute CSS widths for page elements.
> - If necessary, CSS media queries can be used to apply different styling depending on screen size.
> - Ideally, serve responsively-sized images.

Mobile Speed

● Very Slow

✘ Enable compression

✘ Optimize images

✘ Eliminate render-blocking JavaScript and CSS in above-the-fold content

✘ Prioritize visible content

✘ Leverage browser caching

> Like with desktop, the time it takes a mobile page to load is an important part of mobile search engine results page ranks. Your mobile/responsive website must deliver and render the "above the fold" content in under one second.
>
> Unfortunately, the mobile page speed for ceoblognation.com is Very Slow.
>
> Since mobile device CPUs are less powerful than desktop CPUs, speed tips that reduce CPU consumption (for instance JavaScript Parse time) need to be addressed first.
>
> See Google's PageSpeed Insights Rules for more information on how to improve each of the elements in this section.

Mobile Frameworks

No mobile frameworks have been detected.

> Mobile or responsive frameworks are an important part of website optimization as they assist developers in creating applications which are applicable to multiple devices.

Usability

URL

ceoblognation.com

Length: 13 character(s)

> Keep your URLs short and clean and avoid long domain names when possible.
>
> A descriptive URL is better recognized by search engines. A user should be able to look at the address bar and make an accurate guess about the content of the page before reaching it (e.g., http://www.mysite.com/en/products).
>
> Keep in mind that URLs are also an important part of a comprehensive SEO strategy. Use clean URLs to make your site more "crawlable" by Google™.
>
> Resource: Search for a good domain name. If no good names are available, consider a second hand domain. To prevent brand theft, you might consider trademarking your domain name.

Custom 404 Page

Great, your website has a custom 404 error page.

Your server responded with the HTTP status code: 404

> Custom 404 error pages are an opportunity for you to reduce customer frustration and link to other pages on your site.

Page Size

113.5 KB (World Wide Web average is 2 Mb)

> Two of the main reasons for an increase in page size are images and JavaScript files. Large page size contributes to slow page speeds so try to keep your page size below 2 Mb.
>
> Tip: Use images with a small size and optimize their download with gzip.

Load Time ✖

◎ ◎ ◎   ⚙ ⚙ ⚙

5.88 second(s) (158.63 kB/s)

0.25 second(s) (3,527.94 kB/s)

0.87 second(s) (1,428.96 kB/s)

0.53 second(s) (584.05 kB/s)

● ceoblognation.com

● entrepreneur.com

● inc.com

● under30ceo.com

Site speed is an important factor for ranking in Google search results. Load time affects not only visitor engagement, retention, and conversion rates, but it can also affect your rankings.

ceoblognation.com took 5.88 seconds to load at a speed of 158.63 kb per second.

This is too slow and it is likely impacting your search rankings and user experience.

High load times can be caused by a number of things, including pages with poor code optimization (cache, Mysql queries, etc.), server problems, network problems, or third-party issues (advertising codes, analytics codes, etc.).

Site speed is an important factor for ranking high in Google search results.

Resources:

Check out Google™'s developer tutorials for tips on how to to make your website run faster.

WooRank subscribers who have an Advanced Review can sign up for uptime notifications. We'll monitor your server and send you an email alert whenever your site goes down.

Language ✔

◎ ◎ ◎   ⚙ ⚙ ⚙

Declared: *English*

Detected: *English*

Great, your declared language matches the language detected on the page.

Make sure your declared language is the same as the language detected by Google.

Tips for multilingual websites:

- Define the language of the content in each page's HTML code.
- Specify the language code in the URL as well (e.g., "mywebsite.com/fr/mycontent.html").
- Use hreflang tags to specify language and country for Google, and the "content-language" meta tag to specify the language and country for Bing.

Structured Data Markup ✔

◎ ◎ ◎   ⚙ ⚙ ⚙

| og description | og locale | og site_name | og title | og type | og url |

| jsonld WebSite | jsonld SearchAction |

Structured Data Markup is used to generate Rich Snippets in search engine results. It is a way for website owners to send structured data to search engine robots; helping them to understand your content and create well-presented search results.

Get the most out of Google's rich snippets for content types such as: Reviews, People, Products, Businesses and Organizations, Recipes, Events, Videos and Music. If your website covers one of these topics, then we suggest that you annotate it with Schema.org using microdata.

Get to know the technologies used for your website. Some codes might slow down your website. Ask your webmaster to take a look at this.

Speed Tips

◎ ◎ ◎   ⚙ ⚙ ⚙

Warning: your website's speed could be slightly improved.

✔ Perfect, your server is using a caching method to speed up page display.

✔ Perfect, your website doesn't use nested tables.

✘ Too bad, your website is using inline styles.

✘ Too bad, your website has too many CSS files (more than 4).

✘ Too bad, your website has too many JavaScript files (more than 7).

✘ Too bad, your website does not take advantage of gzip.

Website speed has a huge impact on performance, affecting user experience, conversion rates and even rankings. By reducing page load-times, users are less likely to get distracted and the search engines are more likely to reward you by ranking your pages higher in the SERPs.

Conversion rates are far higher for websites that load faster than their slower competitors.

See Google's PageSpeed Insights Rules for more information on how to improve each of the elements in this section.

Blue 16 Media - Website Review

Analytics

◎ ◎ ◎   ⚙ ⚙ ⚙

Google Analytics

Web analytics let you measure visitor activity on your website. You should have at least one analytics tool installed, but It can also be good to install a second in order to cross-check the data.

Popular Analytics Tools Include: Google Analytics, Quantcast™, AdobeAnalytics™, Piwik™, chartbeat™, Clicky™, ClickTale™, etc.

Doctype

HTML5

The Doctype is used to instruct web browsers about the document type being used. For example, what version of HTML the page is written in.
Declaring a doctype helps web browsers to render content correctly.

Encoding

◎ ◎ ◎   ⚙ ⚙ ⚙

Great, language/character encoding is specified: utf8

Specifying language/character encoding can prevent problems with the rendering of special characters.

SSL Secure

◎ ◎ ◎   ⚙ ⚙ ⚙

Your website is SSL secured (HTTPS), but the Common Name is set to www.blue16media.com.

✔ Your website's URLs redirect to HTTPS pages.

✘ Your headers are not properly set up to use HSTS.

✔ The SSL certificate expires in a year.

✔ The certificate issuer is GoDaddy.com, Inc..

Using an SSL certificate creates an encrypted connection between your visitor's browser and your website's server adding an extra layer of security. In 2014, Google announced that HTTPS would become part of their ranking algorithm and since your website is not HTTPS, it will likely rank below your HTTPS competitors. When moving to HTTPS, follow these best practices for a smooth transition:
- Use a serious issuer to purchase your SSL certificate
- Redirect all of your HTTP pages to the HTTPS version of your website
- Use HTTP Strict Transport Security in your headers
- Renew your SSL certificate every year, before it expires
- Make sure that all of your content (CSS, etc.) is linked to HTTPS
- Update your XML sitemap to ensure the URLs include HTTPS and update the robots.txt file to reference this version
- Register the HTTPS website in Google & Bing Search Console/Webmaster Tools
Backlinks

Backlinks Score

◎ ◎ ◎   ⚙ ⚙ ⚙

Good		● ceoblognation.com
Excellent		● entrepreneur.com
Excellent		● inc.com
Very good		● under30ceo.com

The backlinks score is calculated by looking at a combination of link signals. This includes the overall number of backlinks together with the number of linking domains, as well as rating the overall quality of the backlinks pointing to a website. The quality assessment is based on the linking pages.

Backlinks Counter

◎ ◎ ◎   ⚙ ⚙ ⚙

44,410		● ceoblognation.com
10,314,846		● entrepreneur.com
20,176,144		● inc.com
112,211		● under30ceo.com

We've detected 44,410 backlinks pointing to your site.

Backlinks are links that point to your website from other websites. They are like letters of recommendation for your site.

Since this factor is crucial to SEO, you should have a strategy to improve the quantity and quality of backlinks.

Referring Domains
1,128		● ceoblognation.com
