Throughout this book you will find links to external websites which we have provided as a convenience to you, the reader. Although we have made every effort to ensure these links are accurate, up to date and relevant, we cannot take responsibility for the pages maintained by external providers.

## IMPORTANT NOTE

I am not a doctor, and I do not diagnose, prescribe, treat, or cure. I merely pass along information based on my own personal experience and the experience of others. The information contained in this book is strictly for informational and educational purposes only. Nothing in this book is intended to constitute medical advice or treatment. Nothing in this book has been approved by the U.S. Food and Drug Administration (FDA), or any other Government agency. This information does not constitute the practice of medicine, and does not replace the advice of your physician or other health care providers which you should seek out if you have a medical condition.

If you wish to apply any of the ideas or information in this book, you are taking full responsibility for your actions. You accept 100% responsibility for any and all use made of any information herein. You and only you are responsible if you choose to do anything based on what you read herein. If you do anything recommended in these pages without the supervision of a licensed medical doctor, you do so at your own risk.

To take or not to take MMS is a personal decision. Each individual must take responsibility for their own health. Any substance one puts into their body, be it food, drink, herbs or other natural substances can cause adverse side effects in some people. Some people have even died from allergic reactions to peanuts and strawberries. Author, editor, publisher and anyone involved in the making of this book cannot take responsibility for any adverse detoxification effects or consequences resulting from the use of any information or procedures described in these pages.

The substances mentioned in this book cannot cure an illness, or even supply nutrients for healing the human body. The author does not claim any substance mentioned in this book will cure. The substances mentioned in this book will kill most disease pathogens and oxidize various poisons in the human body. Then the body is able to heal itself.

The information in this book was developed as a result of the experiences of hundreds of thousands of people, who gave feedback. I do not suggest anyone follow any of the suggestions given in this book regarding sodium chlorite and/or chlorine dioxide without proper instruction in its use. This can be found in the ***MMS Health Recovery Guidebook***, which has many important things one needs to know and do concerning using MMS.

The above mentioned book has exact details that make MMS work. Like any important health aid, exact details must be followed to have success. Sodium chlorite has been available in the US for 80 years but it became a great deal more effective for health recovery when the proper protocols were developed. No one should take MMS without first studying the data in the ***MMS Health Recovery Guidebook***. Please be sure to follow that information carefully.

**THIS BOOK IS DEDICATED TO MANKIND**

## FORWARD

Jim Humble first came to my attention in 2009. On investigating the claims being made by devotees and proponents of the MMS innovation we were at first cautious and somewhat disbelieving: ‘a radical curative for the biggest killer on earth (malaria) and a ground-breaking treatment against multiple diseases!...?!’ It sounded too good to be true. On closer inspection the claims appeared then, as they do now, to stand up to scrutiny.

In 2009 whilst producing the Millennium Development Goal’s Awards (at the United Nations General Assembly Hall) and then in 2010 as Director-General for the United Nations IGO (Intergovernmental Renewable Energy Organisation) I gained significant access to leadership in many nations across the developing world. It became glaringly obvious through countless conversations at the diplomatic and leadership level that big pharmaceutical interests controlled the narrative as it relates to human health and wellness.

In other words the capacity for humanity to treat, heal and cure itself from disease and affliction was not only compromised but being made statutorily illegal across the globe. This ‘harmonisation’ of rules and regulations masquerading as law were being promulgated essentially through the multilateral governance sector and its attendant Codex Alimentarius.

Agencies mandated to protect and serve the interests of humankind appeared to have become profoundly compromised if not weaponised. Diplomats and frontline activists continue to voice their increasing concern that global *population-control* (engineering) and even *depopulation* appear to be a seminal function of rogue elements operating within the status-quo.

What manner of insanity has subsequently taken grip over our world since that time? Today it is patently obvious, even forensically evidential, that there are oblique and nefarious interests coupled to our organs of governance and law which dare to transgress the cornerstone of all natural law, which is and always has been: ***the Right to Life***.

Jim Humble and his extraordinary life of research, discovery and noble dispensation of natural treatments for all manner of diseases has consistently been under attack. His sterling reputation has been tarnished and his life's work distorted and maligned by deviant elements within the press and media working in concert with those same vested interests.

We are honoured to be publishing his opus magnus '***The Solution***' which clearly illustrates the lawful, legal and righteous use of Sodium Chlorite & Chlorine Dioxide as miracle molecules for the effective treatment of countless diseases and afflictions suffered by billions of souls on our planet. They are cheap and effective and offer no utility for inflated profiteering off the suffering of humanity.

We salute Jim Humble, as we do all those brave and noble pioneers of health and medical research and dispensation who continue to put people before profit.

*Arise homo-sapiens!*

## **THIS IS A TRUTH THAT CAN SET YOU FREE**

Because the world has been in bondage  
for more than 100 years – this is  
probably the most important discovery  
of our time to set you free!

# INTRODUCTION

## THE DISCOVERY

In 1996 a gold prospector deep in a rain forest jungle in South America, gave two malaria victims a drink of water that was purified with a cheap industrial water purification chemical. The entire camp was amazed to see the men get well in about four hours. The same thing happened with two more malaria victims the next day. Over the next months as he traveled throughout the region, the prospector soon found that the substance used to purify water overcame most of the diseases in the jungle. For more than nine months he helped the people in that area overcome malaria and many other diseases.

He eventually took this discovery to many places in Africa, Indonesia, Australia, New Zealand, Europe and many other countries. Over the next 22 years people he trained helped thousands of people recover their health from hundreds of different diseases. He took this solution directly to those who were sick and kept it “hidden in plain sight” to avoid, as much as possible, those who may have wanted to stop it. It quickly spread to more than 150 countries as it was kept grass roots. Probably the main reason that it remained so was because people could not believe that it does what it really does, that is, helps people recover their health from almost all diseases known.

Since the discovery of this amazing highly effective substance, awareness concerning it continues to grow throughout the world. There is a very simple reason for this: Health is a very precious asset. More and more people have discovered that this substance can be the solution to a health problem when nothing else has worked. And thus I want to tell you the good news about this amazing health-giving solution.

## CHAPTER 1

# THE SUBSTANCE

The purpose of this disclosure and this book is to tell the world the name of this substance and how to use it. The name of the substance that has been proven capable of overcoming nearly all of mankind's diseases **including the new super bugs and also drug addiction, is chlorine dioxide**. Chlorine dioxide is produced by mixing sodium chlorite and a food acid — when these two are properly combined, they create chlorine dioxide. Just like table salt which is sodium chloride there is no free chlorine in chlorine dioxide. *(Please see more thorough information on how this works later in this book.)*

Here is a truth you can check out: Because of its unique characteristics there are more than 100,000 patents issued in the USA and Europe concerning chlorine dioxide. That's many more patents than any other chemical, by tremendous amounts. There are many patents concerning overcoming incurable diseases with chlorine dioxide starting as far back as the early 1980s. These and hundreds of research papers have been hidden from the public by mainstream media, preventing all of this from being known. But it is still out there if you look for it. *(See more information and a list of patents in Chapter 9, and articles in Chapter 10.)*

Although proper protocols for overcoming diseases using chlorine dioxide have not been known, this chemical (chlorine dioxide, made from sodium chlorite and a food grade acid) has been used for many years under the name of products such as Stabilized Oxygen and other names, such as O7, Liquid Oxygen and others. You see, stabilized oxygen technically is not chlorine dioxide, stabilized oxygen is sodium chlorite and water. But, it is important to note that when sodium chlorite is touched by stomach acid it produces chlorine dioxide. So in effect, when one ingests stabilized oxygen, or a sodium chlorite solution, they are getting chlorine dioxide into their body, because chlorine dioxide is produced when the sodium chlorite is activated by the stomach acid, or as mentioned above, when it is pre-activated by mixing with a food acid.

Stabilized oxygen has been sold in health food stores for 85 years. It has been obtained from health food stores and ingested by hundreds of thousands of people in the USA for all these years. No records of injury or death have been recorded in all that time from the use of stabilized oxygen (which is sodium chlorite in water).

## Chlorine Dioxide – The Simple Explanation

After I first discovered (yes, I was that prospector in the jungle in 1996) that this amazing substance could eradicate malaria in as little as four hours, I continued to work with the solution until I developed a specific formula with it. This formula has proven to help people recover their health from a wide range of disease and illness. I call my formula MMS (Master Mineral Solution).

Chlorine dioxide, when used for overcoming diseases (according to my formula), is used in a very weak solution (it is diluted by water more than 2,000 times) and thus cannot harm the human body in that dilution. Although some doses for tough diseases are less diluted than this, most doses of MMS are this strength or less. Many doses are also much more diluted than even this amount. None of the doses will do damage to the human body. I have already mentioned that health food stores have been selling MMS (sodium chlorite which is unactivated MMS) as a health drink for 85 years. The various different products that have been sold have come in many different strengths, some of which are much stronger than what is mentioned here.

In those 85 years it was never realized what sodium chlorite which produces chlorine dioxide (MMS) could really do. One single drink, often helped many people's health problems, however seldom solved the full problem. This is because MMS only lasts about one hour when in the human body. It simply takes more than one hour of being present in the body to kill most diseases. People often took daily doses, but it takes more than one or two doses in a day if you are dealing with a serious disease. I finally came to this realization and suggested people take hourly doses at least eight times a day until the disease was gone. That was 17 years ago. MMS is now in more than 150 countries being used by people who were trained by myself or by the Genesis II Church of Health and Healing. If you want to learn more about MMS go here: [www.jimhumble.co](http://www.jimhumble.co) — [www.mmswiki.is](http://www.mmswiki.is) — [www.mmstestimonials.co](http://www.mmstestimonials.co)

There is a great deal of information on the internet regarding MMS, some good, but unfortunately there is also much misinformation circulating about it. Much of the misinformation comes from bogus media stories that intentionally attack MMS and other alternative methods. However, some of the misinformation also comes from well-meaning people. This is due to many reasons. Some zealous folks spread the word, but have failed to keep up-to-date with new developments and thus are passing on outdated information. Other would-be authorities simply get it wrong. Whatever the reason, there is sometimes confusion surrounding MMS. Although there are critics, those who have tried it or talked to several people who have used it correctly, in general do not criticize MMS. Keep in mind that any health item must be used correctly. Just taking it any old way doesn't usually get the job done. This has been a major factor why I wrote my most recent book, the *MMS Health Recovery Guidebook*. This book outlines in a clear and concise manner, the fundamentals of MMS and how to use it to get well. The book does not deal so much with the science of MMS, as it is simply about helping people know how to use it to recover their health.

Chlorine dioxide (MMS) is a very weak oxidizer even before it is diluted, and is an extremely unique chemical. It is amazingly active, even more so than oxygen. Where oxygen, the greatest oxidizer, can oxidize many more things than MMS, MMS is highly specific for oxidizing diseases. Chlorine dioxide (MMS) is used in more than a thousand public water works around the world to kill diseases in the water before it is distributed to the public, and it can also be used to kill the diseases in the water of the human body in the same way. In other words, chlorine dioxide, when used in a very weak solution (such as MMS) can also oxidize diseases that exist in the human body. It is the highly active yet very low oxidation potential that makes chlorine dioxide run through the human body killing pathogens which include bacteria, viruses, molds, fungus, yeast, and tumors without harming the body in any way.

## **MMS – A Safe Solution to Health Problems**

In over 100 years there are no recorded deaths or permanent injuries caused by MMS. That is, either sodium chlorite, which is MMS before it is activated by food acid, or chlorine dioxide (which is activated MMS), with the exception of one single industrial accident. This accident, (the only recorded death we know of), was caused by chlorine dioxide gas and it occurred many years before MMS was discovered.

This is in spite of the fact that not only millions, but billions of people use it each week, many without even realizing, as it is used in public water purification systems, for preserving vegetables and meat, sterilizing hospital floors and work areas, and hundreds of other uses in mainstream society. And for the past 22 years millions have used it to recover their health from disease/illness. The fact is, sodium chlorite (unactivated MMS) has been taken orally by hundreds of thousands of health food enthusiasts in the USA for more than 85 years in various different strengths, from as strong as it is used in public water works to 1000 times that strength. So you see, in essence, hundreds of thousands of people have been taking chlorine dioxide (activated MMS) for 85 years.

Remember, sodium chlorite is activated by the individual's stomach acid — so when someone takes sodium chlorite alone they are still getting chlorine dioxide. In all that time and all the thousands of users there has not been a single official report of death or permanent injury. However, those that used sodium chlorite for many years (in the form of stabilized oxygen and in other products I mention in this book) just didn't have the proper protocol to fully overcome cancer and other diseases, which for the last 22 years many have had success with using MMS. Contrast this – no deaths or permanent injuries with MMS — with hundreds of thousands of people dead from pharmaceutical drugs each year worldwide.

In addition to Stabilized Oxygen, there are other health products made of sodium chlorite being sold to the public, some of these include Aerobic 07, Dioxychlor, Bio-Chlor-Dox, Liquid Oxygen, CTx, TwinOxide and others. See Chapter 11 for further details about each of these products. The answer to all disease has been here for the last 36 years along with partial knowledge for 100 years. Right now, this minute, chlorine dioxide (that's activated MMS) when used properly helps people fully recover from malaria (with one large dose) in 98 out of 100 malaria victims. The world needs this. Please wake up!

There is another very important point to understand about MMS. Many people naturally say “MMS cures” this or that. I've made this same statement myself from time to time as a matter of going with the flow of terminology that others use. In our speech and in our global society, we often blur the lines with words and their meanings. But the fact is, that MMS does not cure disease. MMS kills pathogens and neutralizes the poisons created by the pathogens. That is its only function. Once the pathogens and poisons are gone then the body cures the body. It's a two-step process. The

pathogens and poisons are eliminated and once pathogens are wiped out and poisons are oxidized, through the normal process of elimination, the body washes them out and then the body is able to heal and be restored to full health. I often say, “The body heals the body.” MMS helps to line things up so the body can do just that.

But you see, it’s a very important step in the process of recovering health. It is the first step and an absolute essential step, to get rid of the pathogens and poisons. Once this process is complete there will likely be more steps one must take in order to stay healthy. The body needs proper nutrition and proper care to maintain good health. One must eat right, exercise right, rest enough and live right in order to maintain good health. The purpose of this book, however is to get you going with the first step.

## CHAPTER 2

# EXPOSING THE LIES – CHECK THE FACTS

I have explained to you some of the amazing qualities of MMS (sodium chlorite and chlorine dioxide) and how it has actually been around for a long time. And remarkably, for the last 22 years when used in the proper strengths and using the proper protocols, thousands of so-called incurable diseases have been overcome. This includes new diseases, super bugs, and believe it or not, even drug addiction.

Sadly, this information has been kept from the general public by the main stream media which has in large part become fake news which sometimes reports fake science. Some of the larger mainstream media groups, BBC, ABC-USA, CBC-Canada and other smaller newsgroups featured false stories about MMS over the years and tried to prevent the truth from being known. Although there were and are thousands of individual testimonials, the news groups called me a liar. These media outlets overlook the thousands of testimonials of those who have overcome their diseases. This makes one wonder if they even bothered to investigate. In addition, they showed false so-called “facts” demonstrating mixing of the substance in a totally absurd way — way too strong — beyond belief. Their so-called facts were anything but the truth. Now comes the time when the truth can no longer be silenced. The fact is, for 22 years the word about MMS has spread far and wide. As a result, thousands and thousands of people around the world have been helped and have successfully recovered their health from many diseases.

I have to say it, MMS, which is the inexpensive chemical sodium chlorite activated with a food acid that creates chlorine dioxide, does what many say is impossible. MMS can eradicate malaria in as little as four hours. Not only that, but in the last 22 years it has proven to help people recover their health from serious to life threatening diseases, to simple yet bothersome health conditions. Yes, that’s unheard of, but many thousands have recovered so far. And yes, this is kept from the public — why? The news does not report it and neither do major health organizations and others who have been presented with the facts.

The purpose of this book is to give you, the reader, documented proof that when sodium chlorite is simply used to create chlorine dioxide (MMS), this substance can overcome the diseases of mankind. Anyone can do it. There is no such thing as an incurable disease, except of course, when a disease has been allowed to progress beyond help. But one never knows when that point has been reached. I have seen recoveries with those who were given two days to live, and even those who were given two hours to live.

You will find in these pages evidence that it is perfectly safe to try MMS and that anyone who chooses to take responsibility for their own health has a very high chance of recovering from most diseases known to man. In this book you will find reports from government agencies such as the FDA and EPA, pharmaceutical research groups, and others. Fortunately, these various agencies have all written reports favorable to chlorine dioxide *before* it was known what chlorine dioxide (known to many worldwide as MMS for recovering health from a variety of diseases) can do. I give links to every article in this book that proves this data. (At the time of writing this book the links given are accurate and working. However, I cannot take responsibility for them staying up and working. Already a great deal of valuable truth has been removed from the internet.) In some cases I also quote some major corporations when their research shows promise. MMS is now used around the world in at least 150 countries for health recovery, mostly on a grass roots level. It is used below the awareness of the general public but the people using it can be found and their work observed.

Because billions and trillions of dollars are involved you can readily believe that chlorine dioxide may never be approved by the FDA for treatment of diseases of any kind. I am extremely sorry that there are people in this world that are so evil, but there are, and it is of no value to pretend that they don't exist. I am sorry but there is a whole industry that treats only the symptoms of diseases in order to keep you sick. I am sorry that man has developed a *sick care* system instead of a true health care system.

It is my hope that the data given in this book will help release mankind from the bondage of many years. It's a radical concept for many to grasp, but the truth is, mankind can heal themselves by themselves. Anyone who is willing to take responsibility for their own health can find health freedom. There is tremendous data out there that has been accumulating for over 100 years that helps prove my point, but it is rapidly disappearing. Some information has been taken down or blocked on the internet, so this book

is an attempt to reveal the truth, while information is still available. As you continue reading, I will explain things from time to time. You are invited to check any of my data. I use as my evidence the writings of government agencies as well as trusted corporations. In all cases I have given links to the articles concerning chlorine dioxide and the chemical sodium chlorite (all the articles purporting to be true). I may explain something that is not clear, but I always try to avoid adding my opinion except where needed to explain data.

People in the United States have been ingesting sodium chlorite for more than 85 years with much benefit and no problems. Some news agencies and critics call it bleach (as in common household bleach). Not only is it not the same as chlorine bleach or Clorox, it is a completely different chemical. For further explanation regarding MMS and bleach, see Chapter 5, under the subtitle — What MMS is Not. The amount of sodium chlorite in a basic MMS dose is over 2,000 times weaker than bleach, and regardless of the name and smear campaign, hundreds of thousands of people have benefited.

Not only is sodium chlorite (as used according to MMS formula specifications) diluted 2,000 times or more, but when sodium chlorite is mixed with the activator (weak acid) it then creates chlorine dioxide, which is one of the weakest oxidizers known. That is why it can run through the human body killing pathogens and poisons without doing damage to the body. But please, don't go taking any amount you can imagine and wonder why it made you sick. In other words, **more is not always best. Too much of anything is a bad thing. MMS, like anything, must be used correctly.**

It is my desire that you be totally confident in your safety should you try sodium chlorite/chlorine dioxide (MMS) as it is a great deal safer than using a single baby aspirin. Please take the time to review the links and articles in Chapters 9 and 10 of this book. Though many thousands and thousands of people have been using sodium chlorite and thus chlorine dioxide for over 85 years, you're not likely to get an allopathic doctor to recommend trying MMS no matter how safe because it simply isn't within their experience or belief. However, off the record, more and more doctors, nurses and health care practitioners around the world are embracing MMS all the time. In addition, thankfully there is a growing trend towards functional medicine which looks at the whole body and seeks to find the cause of disease rather than only treat the symptoms.

## Why is this book needed?

If you want the truth then you must know the facts, please take some time to understand the data given in this book — the articles, patents, and other information proving the effectiveness of sodium chlorite/chlorine dioxide. These things have been proven many times over. Now with fast track FDA if you are a drug company you don't need to prove the medicine is effective or safe, just pay your millions and your new medicine gets approved in a relatively short period of time. Getting a medicine accepted by the FDA costs over 800 million dollars at this time. I barely have 800 dollars much less 800 thousand or 800 million. But even if I did have 800 million dollars I don't believe it is likely that MMS will be approved by the FDA ever. But for those who want to take responsibility for their own health, you have a great chance of recovering your health with MMS. All you have to do is wake up just enough to see past the lies of some of the medical agencies, pharmaceutical, and fake news groups to take control of your own health recovery.

This book is to bring awareness. The FDA, EPA and any number of other alphabet soup agencies have issued warnings, and even statements such as, "several people called in stating they vomited," but out of billions who have used chlorine dioxide no one died, nor did anyone ever call in with a record of chlorine dioxide causing permanent damage. For the record, vomiting, though unpleasant, can be considered a sign of the detoxification process. It is the body's way of getting rid of unwanted toxins, and it is actually one of the least harmful side effects in the healing process. I do not advocate trying to make oneself vomit. The idea is to build up to proper dosing with MMS at a low and slow enough rate so that vomiting does not occur. But if one does vomit, again, it is the body's way of getting rid of unwanted toxins and getting rid of toxins is a good thing. Now, compare vomiting to a long list of serious side effects associated with many pharmaceutical drugs including depression, suicidal thoughts, kidney failure and even death just to name a very few (there are many more). Keep in mind that every year thousands of deaths are caused from a simple aspirin and scores of other prescribed drugs.

## The Evidence

So let me say once again, in case you have missed it. The information offered in this book is not my data. I give some explanations about the data which comes from government agencies, government approved patents and trusted corporations. (*See Chapters 9 and 10.*) Internet links are provided to each piece of information. The patents using chlorine dioxide to cure incurable diseases began to be created in the early 1980's. There are more than 14 countries that issue patents. Many of them have issued patents on chlorine dioxide. I have not listed the exact number of patents issued by the US because that would be very hard to do and tedious to read. But I have listed 40 patents mostly concerning the curing of diseases, including what is considered incurable diseases, because I felt that this many patents would be enough to make my point. I have listed the patent numbers to each patent so you can check the authenticity of exactly what I am telling you and even get a copy of the patents. (*See Chapter 9.*)

## CHAPTER 3

### WHAT IS THE BONDAGE?

For over a hundred years pharmaceutical drugs have been researched and formulated to treat the symptoms of diseases, never the cause of disease. And thus people are kept sick when treated, as treating the symptom seldom cures and often just stimulates the disease. **The bondage is, the people of this world have been deliberately kept sick with pharmaceutical drugs and forced to pay for them on top of it.** And that is, of course, after they have been made sick by many other agencies and private companies by the poisons in our food, in our soil, in our water, in our air, in our vaccines, and dozens of other places. The poisons are put everywhere for that purpose, to make us sick. The medical drugs are there to keep us sick.

Every sickness on earth has doubled, tripled, or quadrupled. In addition there are more and more new illnesses and diseases every year. This has not happened by chance. It is not a normal thing for illness to increase more and more with everyone spending more and more money just to stay alive. The United States spends twice as much per capita on health care costs as other developed nations. This is the government spending, not to mention the cost to individuals — people spending large amounts of money, yet getting poor health in return. People going into heavy, sometimes unbearable debt, to pay medical bills and/or losing their homes and so on.

Face the facts, something is wrong! It can't be right that all this disease and ill health exists in astonishing increasing numbers while vaccinations are supposed to be *totally* effective. What is wrong with this picture? The bondage is people being lied to by fake science so that more and more people each year (some estimate this number to be nearly a million) have to sell their homes, and their cars and everything else they might own to pay for an ineffective treatment. The bondage is being forced to live in a society where one group of so called “educated people” have set themselves up to be purveyors of a science that is often fake, yet it is presented to the rest of us as absolute truth. Of course, not all educated people push the fake medical science, but by simply resigning themselves to it, many are accepting it. Silence breeds consent. I must say though, more and more

people are coming to realize the truth and are waking up to the fact that something is drastically wrong.

The bondage is that astronomical numbers of people die needlessly from medical drugs and procedures each year. Check out *Death by Medicine* authored in two parts by Gary Null, PhD, Carolyn Dean, MD ND, Martin Feldman, MD, Debora Rasio, MD, and Dorothy Smith, PhD. See: <http://www.webdc.com/pdfs/deathbymedicine.pdf>

Legal prescription drug abuse has for some years now been epidemic in the US. The comprehensive *Death by Medicine* describes in detail how everything from medical errors to adverse drug reactions (ADRs) to unnecessary procedures and unnecessary hospitalization cause more harm than good and states that it is now evident that the American medical system is the leading cause of death and injury in the US. This data was compiled some time ago, but further internet research on this topic will turn up many more startling statistics and show that the situation is not getting better by a long shot. Medical journals report that pharmaceutical-based drugs are now a leading cause of death and injury in developed countries. Current statistics on the opioid crisis, cancer, heart disease, diabetes, Alzheimers, autism and scores and scores more diseases and illness are simply off the charts. I will not delve too deeply into all the statistics regarding this here as you can research it yourself by going to the link above and searching out other resources — there are many. But suffice it to say, one would literally have to have their head in the sand not to notice the extreme amount of sickness in the world today. But again, putting this grim picture aside, the purpose of this book is to share good news! I want to show you that **there is a solution** — a simple and affordable substance which can help people take charge of their own body, to get well and stay well and enjoy vibrant health.

## The Scheme

Now I don't want to get into the conspiracy of it all, but I do have to tell you the following so you can get the idea. Back in the early 1900's John D. Rockefeller went around to all the medical colleges and offered money, lots of it, if they would take the information regarding herbal medical treatment of all kinds out of their curriculum. Needless to say, they all finally wound up doing so. This led to the worst of all things. Those with money invested in the medical field began pointing medical research and medical treatment towards the relief of symptoms of diseases and

never towards finding and treating the cause. Since that time, nearly all allopathic medical practices have worked towards this goal, that is, the goal of treating only the symptoms of diseases rather than the cause of disease. And this is what created the fake medical science we have now.

Down the line, as government agencies were created, this goal or idea was instituted. You've probably heard the saying, "follow the money," this is doubly true in this case in order to understand why so much of the medical science is fake. With rare exceptions new research and new medicines were simply refused or ignored by government and medical/pharmaceutical groups if they were effective against the **cause** of diseases. There is more money in keeping people sick. If a new researched medicine or treatment for disease targeted the cause rather than the symptoms it was likely ignored. Many who worked for research groups that were on to finding and treating the cause of disease were fired, prosecuted, refused research money, ridiculed, or in some other way stopped — sometimes by drastic means. It was that way back then and it continues today. It happened to me (*see Chapter 8*).

There are those who poo-pah the idea of a conspiracy to stop actual remedies and that some higher powers would go to the nth degree to stop them. But check it out. Don't listen to me — do some research. In the last century several hundred scientists and medical people with cures for diseases have met "unnatural" deaths. Something is wrong with this picture! You can research this out further on the internet if you so choose.

The colleges now teach fake science about many things such as fake global warming and climate change, and they teach that there is no such thing as free energy and many other great things. But for those who want to see, there is much proof out there and free energy labs that really work. There is more ice than usual now at the North Pole (2018) and of course "they" said the ice at the North Pole would be all gone by summer of 2015. I'll leave it at that, as this book is about informing the world how to overcome disease, not about different "conspiracy" theories.

As you continue reading you will find data showing that MMS (unactivated/sodium chlorite and activated/chlorine dioxide) are extremely useful chemicals and safe for ingestion and other uses with the human body. I implore you to check it out. It is my desire to give you this information, so you can make up your own mind as to how to handle your personal health and make your own decisions as to whether you want to take charge

of your own health recovery. Unless we have a huge paradigm shift, the FDA or other medical boards around the world are not likely to approve of MMS or any herbal medicines that treat causes instead of symptoms. It is my opinion, that if you want to recover from cancer or any disease for that matter, you are going to have to take responsibility for your own health as there is no one else to do so. I can't personally help you, there are too many people who need help. I would if I could, but it is good that I can't because mankind must be able to handle their own recovery from disease. Then no one will ever again put mankind in medical bondage with lies.

The likely reaction to this book by mainstream institutions will be at first to ignore it, but they more than likely will eventually react by saying that it is not true and they will likely try to fight it. Medical agencies and some doctors may make their claims that MMS (chlorine dioxide) is a dangerous poisonous chemical as some already do. They may attempt to find anyone who will say something bad about MMS. And while millions die from pharmaceutical drugs each year, they will dig up a few who have had some kind of problem with MMS, like maybe a headache or nausea, and they will blow things way out of proportion.

They may even site the one lady who died after taking a single MMS dose in the Vanuatu Islands (near Australia), however the autopsy could find no indication that the death was caused by MMS. Again, let me point out, no deaths have been attributed to chlorine dioxide in 100 years except one industrial accident (caused by chlorine dioxide gas and this was many years before MMS was discovered) and no permanent injuries as well. Can you see the difference? No deaths from chlorine dioxide and millions of deaths from medical/pharmaceutical drugs. There is no comparison.

## CHAPTER 4

# A SOLUTION – MMS OVERCOMES MOST DISEASES

MMS, when used properly, overcomes most of the diseases of mankind and the evidence is throughout the world today. There are also other products which I mention in this book that are also sodium chlorite and they too overcome many of mankind's ills. However, these other products do not do the job as well as MMS, but this is only because of the protocols that go with MMS. If the proper protocols were developed for all of the other products made from sodium chlorite, which in turn generates chlorine dioxide when mixed with food acid or stomach acid, they would likely all eradicate cancer and all the other diseases. See Chapter 11 for more information on these other products.

It has been believed that diseases are incurable ever since the medical universities took herbs out of the medical curriculum. Powerful people in high places made many of the diseases of mankind incurable. Now it is time to make true healing a reality again — we must wake up.

I discovered something that was already known and used by thousands of people. The information about my discovery I have described as **“a truth that can set you free”** and this is for a reason, because **now the majority of mankind can take responsibility for their own recovery from diseases.** We no longer need to be in bondage to pharmaceutical drugs that do not really work and cause hundreds of thousands of unnecessary deaths each year. Millions of people have already learned to use this truth, chlorine dioxide, and if you haven't yet, you can too.

Before I continue, I want to clarify here, I am certainly not against doctors and medical care. I am sure that most doctors do not go to work each day with the intent to harm others. However, most are caught up in a dysfunctional system that is driven by profit. They are not taught in medical school to get to the bottom of the problem, to look at the cause of disease, but rather they are taught to treat the symptoms and the sad reality is, they often face grave consequences if they do otherwise. Fortunately as I mentioned earlier, there are more and more doctors and medical professionals embracing MMS whether off the record or openly. Let's hope

this trend continues along with acceptance of many other natural and what is now considered *alternative methods*. Hopefully the alternative will one day become the mainstream.

So I am saying, don't throw out the baby with the bathwater. We need doctors and medical people, especially for acute problems caused by accidents and some other things that they can fix. But what we don't need is to be coerced into taking expensive medications that cause dangerous side effects and only treat symptoms. What we don't need is being poisoned (chemo), burned (radiation) and/or being cut up and mutilated (surgery) unnecessarily. The key here is unnecessarily. What we don't need is to continue to treat symptoms while ignoring the cause of illness and handling the problem on that level. There is an answer to chronic degenerative diseases. Did you know that by definition chronic diseases are incurable? Doctors are taught to simply help give some kind of relief for these diseases. They try to make the patient more comfortable with a prescription — a pill for high blood pressure, a pill for the heart, a pill for this and a pill for that. Treat the symptoms, never look at the cause and approach it from that angle.

But there is an answer, and what we need is health freedom. Every human being has the God-given, unalienable right to control and maintain their personal health — to choose products for their health, including but not limited to; food plants, vitamins, minerals, herbs and all remedies in any quantities they consider useful or necessary for his or her personal health or the health of his or her family.

It is my hope that the data from official sources presented in this book will not only bring awareness, but that it will help people to feel safe in using MMS. Now that hundreds of thousands of people have already been helped to recover their health, I want others who at this point can accept the truth, to be able to recover their health as well. Hopefully with time, this number will grow.

I should mention at this point, after saying all this, that chlorine dioxide only really works to overcome all these diseases when you have the proper protocols. I have given a brief overview of how it works in Chapter 6 of this book. For full details of proper updated MMS protocols please read the *MMS Health Recovery Guidebook*, available at: [jhbooks.org](http://jhbooks.org)

Chlorine dioxide only lasts in the body about an hour, but to overcome most diseases it must be actually present in the body at least 8 hours a day and in many cases 10 hours a day in order to overcome what has been considered a serious or even incurable disease. This means the various protocols must be followed carefully in order to maintain MMS in the body throughout the day.

There will always be those who will only accept data from those who are in power, but fortunately I have already proven that many people are able to accept the truth no matter where it comes from. This is proving more and more true as time passes, especially in regards to health. Look at the condition of people's health today! Are you sick? Do you have a certain health condition, or maybe several? If you don't, how many loved ones or people you know have a serious health condition? It goes without saying, we are in a world-wide health crisis and people are sick and tired of being sick and tired. As more and more people become disillusioned with medications and health procedures that don't work they are seeking solutions. Maybe not at first and maybe it takes a while, but many people now-a-days eventually get around to the truth if it is presented to them.

I would like to interject here that there are actually many remedies for cancer (and many other diseases) that work and which can be found in natural and alternative therapies. So you might be thinking why MMS? MMS is extremely versatile and has a very wide range of uses. It has proven to work well with extreme health conditions and life threatening disease, as well as for more minor yet very bothersome afflictions. And it has many practical uses in your home and/or office. It is certainly worth checking out, learning about, and having on hand for a wide variety of maladies.

To site some examples, since my discovery in the jungle back in 1996, MMS has proven to restore partial or full health to hundreds of thousands of people suffering from a wide range of diseases, including cancer, diabetes, hepatitis A, B, C, Lyme disease, MRSA, multiple sclerosis, Parkinson's, Alzheimer's, HIV/AIDS, MRSA, malaria, autism, infections of all kinds, coughs, colds, flu, arthritis, acid reflux, kidney or liver disease, aches and pains, allergies, urinary tract infections, digestive problems, high blood pressure, obesity, burns, parasites, tumors and cysts, depression, sinus problems, eye disease, cataracts, ear infections, dengue fever, it's effective for bug bites, including mosquitoes, spiders and scorpions, skin problems, dental issues (including gum disease), dandruff, acne, ulcers, problems with prostate (high PSA), erectile dysfunction, and many others.

The MMS protocols I have developed have also been used to overcome addictions to alcohol and drugs, such as heroin and others, without side effects. It's tremendous for animal care. On a more practical side it is a highly effective air purifier and is great for sick rooms, getting rid of mold, purifying water, keeping the fridge fresh and cleaning veggies. It is a super skin toner, helps with weight loss and is a good overall cleanse and the list goes on. This is by far not a comprehensive list. I know it sounds too good to be true, but according to the results we have seen from around the world, I think it's safe to say that when used properly, MMS has the potential to overcome most diseases known to mankind.

Many people write me and state that they will never be without it. They say that it is a "must have" for every first aid kit or home medicine cabinet, and a favorite "go to" for prevention, to nip illness in the bud before things escalate, as well as a solution to more serious diseases if proper protocols are followed. And last, but certainly not least, it is affordable.

So, I want to show you in the following pages, patents and documents that were created up to 36 years ago or more that prove the safety of MMS (chlorine dioxide, in other words, acidified sodium chlorite). These documents are only a small portion of the actual thousands of papers that were created before this century. These papers pretty much prove that this chemical, chlorine dioxide, does indeed kill the diseases of mankind. This data has been kept from the public with lies, but it simply cannot be kept from the public forever.

## **Recap of Important Facts**

- Chlorine dioxide has been used to purify water for more than 70 years.
- Chlorine dioxide (which is MMS) has been taken as a health drink for more than 85 years by hundreds of thousands of people in the US.
- Chlorine dioxide is used in more than 1000 public water works to kill the diseases of mankind. Why would anyone refuse to believe that it cannot be used to kill the diseases in the water of the human body?
- Sodium chlorite, from which chlorine dioxide is derived, has been sold by more than a dozen companies to improve health for decades. Some of those companies are listed in this book.

- In 2012 the Red Cross did a test in Uganda using activated sodium chlorite (MMS) where 154 malaria victims were cured out of 154 cases, that's 100%. (*They now deny it, but there is compelling evidence in this book, see Chapter 8.*)
- In 1996 I discovered that sodium chlorite (MMS) eradicates malaria in as little as four hours. Since that time many thousands have already been recovered to prove it, but the mainstream media has prevented it from becoming known.
- Since my discovery, various other diseases of hundreds of thousands have been overcome in more than 150 countries (that we know of) of the world by using chlorine dioxide (this is MMS which is made from sodium chlorite).
- Although there are more than 100,000 patents concerning the industrial use of chlorine dioxide starting in the 1930's, there are also many patents concerning the curing of incurable diseases. These patents started in the early 1980's and they are on record in the patent office so that you can have a copy for free (that's proof). Patent numbers and information on obtaining copies are given in Chapter 9 of this book.
- The FDA, EPA, and other government agencies have written many articles praising the use of chlorine dioxide on food and other uses (showing that it is not poisonous). Unfortunately some of this information is disappearing from the internet, including some links I designated for this book. I hope that the links I have included here stay live, but there are no guarantees.
- Fake news has been active in denying that chlorine dioxide (as MMS) helps fight disease and has confused it with common household bleach. They deny the truth by telling lies. Common household bleach (NaClO) destroys pathogens through chlorination. Chlorine dioxide (ClO<sub>2</sub>) kills pathogens through the process of oxidation, there is a big difference. (*See Chapter 5.*)
- Chlorine dioxide (MMS) brings longevity. Since chlorine dioxide kills most diseases, it kills diseases that kill older people. This means there is a good chance that 10 to 20 years of extended life (and better quality of life) can be given to those taking MMS.
- The FDA and other government agencies have written articles branding chlorine dioxide as extremely poisonous, except they have praised its use on food.
- Pharmaceutical drugs almost exclusively treat symptoms of diseases and not the cause of the diseases. This is a way of keeping people sick and dependent on drugs.

- There have been approximately 80 medical doctors and alternate medicine practitioners die from unnatural causes in the last two years and several hundred in the last century. These people were working on things that affected the cause of the disease instead of the symptoms.
- Anyone can make MMS or you can now buy enough MMS to eradicate any disease for less than \$50 USD. Look on the internet. It is available.
- MMS kills viruses as well as pathogens of other diseases. The medical profession has nothing that affects viruses and thus all they can do if you have a viral disease is make you as comfortable as possible and give anti-bacterial drugs that may or may not help.

### Chlorine Dioxide – Some History

**1814:** Chlorine dioxide is discovered by Sir Humphrey Davy, when he adds sulfuric acid ( $H_2SO_4$ ) to potassium chlorate ( $KClO_3$ ). It is an antimicrobial biocide recognized in the early 1900s. Since then it is well known for its disinfectant properties.

**1930's:** Beginning of more frequent use of chlorine dioxide for disinfecting areas. A major benefit of chlorine dioxide is that, as a true gas, it expands uniformly to fill the space it's disinfecting. Due to concerns about the logistics of safely transporting the gas, sodium chlorite began to be manufactured as a relatively safe precursor chemical, and the industries using chlorine dioxide would then generate the gas onsite as needed. Because of chlorine dioxide's solubility in water, it starts being used as a water treatment.

**1944:** First commercial application. Used as a Biocide/Taste and Odor Control agent in domestic water at Niagara Falls in the USA.

**1950's:** Begins extensive use of chlorine dioxide in water treatment plants and swimming pools in the U.S.A. Likewise it is discovered that chlorine dioxide destroys biofilm, the algal slime that collects in cooling towers, among other places and harbors harmful bacteria. Chlorine bleach by contrast cannot kill biofilm.

**1956:** Brussels, Belgium, switches to chlorine dioxide from chlorine for its drinking water disinfection operations. This marks the first large scale use of chlorine dioxide for potable water treatment.

- 1967:** The Environmental Protection Agency (EPA) of the United States first registers chlorine dioxide as a disinfectant and sanitizer. The registration is for chlorine dioxide in the liquid form. Indicated uses include food processing, handling and storage plants, bottling plants, washing fruit and vegetables, sanitizing water, controlling odors, and treating medical wastes.
- 1970's:** The EPA begins recommending using chlorine dioxide instead of chlorine bleach to treat water. Hundreds of municipal water systems successfully convert to chlorine dioxide. This happens across the United States and Europe; more so for the latter. The conversion is catalyzed by a safer environmental profile of chlorine dioxide over chlorine, because chlorine dioxide does not produce any harmful byproducts, as does chlorine bleach.
- 1977:** Three thousand municipal water systems achieving biological control using chlorine dioxide.
- 1980's:** Chlorine dioxide gradually replaces chlorine in many industries – in the pulp and paper industry as a bleaching agent, in industrial water treatment as a biocide and as an odor control agent, in food processing as a sanitizer.
- 1983:** The EPA recommends chlorine dioxide as a solution to trihalomethanes (THMs). When chlorine is used to disinfect water and make it potable (chlorination), THMs are produced as a by-product. THMs have been linked to cancer (i.e., they are carcinogenic). Chlorine dioxide does not produce THMs.
- 1988:** The EPA registers chlorine dioxide as a sterilizer. This means chlorine dioxide is both safe and effective to use in hospitals, healthcare facilities, and laboratories.
- 1990:** Use of chlorine dioxide as a disinfectant, sanitizer and sterilizer grows across many industries and countries. Some of the industries are the beverage industry, fruit and vegetable processing plants, pulp and paper industries, and industrial waste treatment sites. These industries are spread across the United States, the United Kingdom and Europe.

- 2001:** The Federal Emergency Management Agency (FEMA) and other government agencies use chlorine dioxide to decontaminate buildings contaminated with Anthrax. The chlorine dioxide was completely effective against the tiny Anthrax spores. The buildings, walls and furnishings suffered no damage from the treatment.
- 2005:** FEMA again uses chlorine dioxide. It is used to eradicate mold infestations in homes damaged by the flood waters from Hurricane Katrina. After a 12-hour treatment, a New Orleans restaurant is able to banish all mold inside without rebuilding.
- 2010:** The United States Food and Drug Administration issue a warning on using MMS according to Jim Humble protocols. They label it as industrial bleach. But at the same time they have approved the use of chlorine dioxide for use in mouthwashes, toothpastes, and as a food service disinfectant among other uses, citing it as being a better alternative than chlorine. *(See Chapters 9 and 10 for information on patents and articles on the approval and safety of chlorine dioxide.)*
- 2014:** The Centers for Disease Control (CDC) registers ProKure V and PERFORMACIDE® as disinfectants against the Ebola virus. Both contain chlorine dioxide. ProKure V claims it “begins to kill pathogens in a matter of seconds, whereas other commonly used, more traditional disinfectants take minutes. The rapid speed in which ProKure V kills pathogens makes it a product of choice for helping contain infectious-disease outbreaks and keeping public facilities cleaner and safer for everyone.” PERFORMACIDE® “is a unique chlorine dioxide generator and delivery system. Chlorine dioxide is a potent virucide.”

## CHAPTER 5

# IMPORTANT THINGS TO KNOW CONCERNING MMS

Why is it that MMS, (chlorine dioxide which is produced from sodium chlorite and a food grade acid), can help the body overcome most diseases? The answer is that disease microorganisms (also known as pathogens) make diseases because of the poisons that they produce. The illness that comes with the diseases is caused by the poisons that the microorganisms of that disease produce, and if one dies because of the disease it is because of the poisons that the disease creates. Chlorine dioxide (MMS) not only kills pathogens but it neutralizes poisons as well. It specifically neutralizes the kind of poisons that diseases create. At this point in time we know that MMS can not only neutralize poisons and kill pathogens, but it also exists in the human body without doing any kind of harm.

There is no question as to whether MMS kills disease pathogens. There have been hundreds of articles describing tests that prove MMS kills most pathogens that are outside the body, existing on vegetables, in laboratories, in public water works, and many other places, so it stands to reason it would also kill pathogens in the human body which is 70-75% water.

Chlorine dioxide and sodium chlorite are chemicals with characteristics that allow them to exist in the human body at certain strengths, and to kill pathogens and neutralize poisons while doing no harm to the body. Once the poisons are neutralized and pathogens are killed, the body heals the body. Once this happens, then the immune system can rebuild — **thus one can strengthen their immune system by using MMS.**

It should be noted that since most pharmaceutical drugs are not oxidizers they cannot neutralize poisons nor kill pathogens. They can often combine with the poisons or pathogens, but that can only change the results of what happens with the disease but that does not kill the disease, in other words get rid of the disease. There are anti-bacterial drugs, many of which no longer work, because pathogens are building up resistance to them. Most pharmaceuticals only affect the symptoms of diseases and normally are not able to kill the disease.

MMS kills the diseases that kill older people before they are 100, so with MMS it is possible to add from 10 to 20 years to your life and be in good health, in other words not in a wheel chair or hooked to a machine. **MMS is also a longevity solution.**

You can find a fair bit of information on MMS on the internet, put in any search engine “MMS Jim Humble” or just “Jim Humble.” But you should know there is also a great deal of misinformation regarding MMS as well. Much of this misinformation comes from bogus media stories that intentionally attack MMS and other alternative methods. However, some of this misinformation also comes from well-meaning people. This is due to many reasons, some zealous folks spread the word, but have failed to keep up-to-date with new developments, therefore they are passing on outdated information. Other would-be authorities, and/or owners of websites for any number of reasons simply get it wrong. This is why I wrote my most recent book, the *MMS Health Recovery Guidebook* to give the most up-to-date protocols and what we have found to work after 22 years of working with thousands upon thousands of people around the world. (This guidebook does not delve into the science of MMS, but it is a clear, concise guide on health recovery.)

So in doing an internet search, be prepared for critical articles and slander by critics who have never seen nor used MMS. There are a group of people who believe they know MMS will not work in the body so they write false articles appearing to sound very scientific sometimes. Perhaps they have never tried it, or they are paid to be critical about MMS.

Below are some *non-technical* technical facts for both the layman and the engineer regarding MMS:

## **Oxidation**

The tiny particles of the universe are held together by the electrons that surround them. Any action that results in the change of the electrons that hold matter together is considered oxidation. You may have thought that oxidation is somehow adding oxygen to what is being oxidized, but not so. Basically, oxidation either removes or changes the position of electrons that hold things together. This either completely destroys the substances or changes them into something else.

## **MMS and Oxidation**

MMS (when activated) is chlorine dioxide. It destroys pathogens (disease causing microorganisms) not by using oxygen, but by drawing away some of the electrons that hold the pathogens together, thus resulting in their destruction. MMS is also completely destroyed in the destructive process, leaving behind only a very minute amount of table salt (sodium chloride [NaCl]) and neutralized oxygen that simply washes out of the body. Various poisons created by the pathogens are also destroyed by the oxidation process. The fact is that MMS does not heal the body from sickness. As the oxidation process of killing the pathogen takes place, it is the body, freed from toxins, that heals the body. Beneficial bacteria are highly resistant to oxidation and thus are not harmed by chlorine dioxide.

## **Other Oxidizing Processes**

Oxygen is the oxidizer that nature has designated for use in the human body because of its many important characteristics. Current oxygen therapies involve more than just breathing. In one type of oxygen therapy, the subject enters a pressurized hyperbaric chamber filled with pure oxygen. Pure oxygen under pressure is many times more effective than non-pressurized oxygen. This has many benefits and in some cases has worked miracles. Unfortunately, the increased pressure also multiplies the negative characteristics of oxygen, namely increasing the oxygen's ability to oxidize (destroy) good cells as well as bad ones. This treatment is also very expensive, and multiple treatments are usually required; therefore, the majority of mankind simply cannot afford the cost.

Two other very powerful oxidizers that are sometimes used in the body are hydrogen peroxide and ozone. While both of these have been and are used to help eradicate disease, at the same time, they can damage the body when used improperly. Both are more powerful than oxygen or MMS (chlorine dioxide). Hydrogen peroxide and ozone can and do destroy many things including human body tissues.

Pathogens hide deep in body tissues. Because hydrogen peroxide and ozone, just like chlorine dioxide, are destroyed when they oxidize something, they are usually destroyed by oxidizing body tissues before they reach the pathogens hiding in the tissues. They can also be destroyed by poisons and impurities in the blood and tissues. Ozone and hydrogen peroxide may be

useful sometimes but they should never be used by someone who is not highly trained in their use.

The oxidation potentials of these four oxidizers are given below. The strength of any particular oxidizer is measured in volts and as you can see, chlorine dioxide (MMS) is the least strong of the four oxidizers. Because MMS is selective (oxidizing pathogens and not body tissues), it can be both more effective in oxidizing pathogens as well as being safer than these other oxidizers.

Chlorine Dioxide.....	0.95 volts	Oxygen.....	1.29 volts
Hydrogen Peroxide.....	1.80 volts	Ozone.....	2.07 volts

The oxidation potential of chlorine dioxide is so low that it can penetrate deeper into the tissues (before being destroyed), where pathogens often hide, and destroy those pathogens. Whereas other oxidizers such as oxygen, hydrogen peroxide, and ozone can never reach these pathogens before they are destroyed. For example, as listed above, the oxidation potential of oxygen is 1.29 volts. Chlorine dioxide's oxidation potential is much lower, only 0.95 volts. That oxidation potential is not strong enough to hurt the body but it is plenty strong to kill pathogens which are all destroyed at more than 0.75 volts. If oxygen, at 1.29 volts, cannot hurt the body it is unlikely the chlorine dioxide (MMS) at an even lower oxidation potential of 0.95 volts will hurt the body. This is why chlorine dioxide can run through the body and not cause damage to the body but can kill the pathogens. The reason why oxygen doesn't kill the pathogens that are deep into the tissues is because it is simply used up before it gets to the disease pathogens. Chlorine dioxide kills the pathogens because although it has a low oxidation potential it is higher than the various oxidation potentials of pathogens.

There are two amazing characteristics that make this low potential highly workable. Chlorine dioxide is extremely active and the chlorine dioxide ion can accept five electrons while an oxygen atom can accept only two electrons. What we are talking about here when we say "accept" is to pull away or remove electrons. Keep in mind we talk about electrons and molecules as one, but in fact, in the body there are millions and billions. So you see, when we are talking about millions maybe billions of electrons.

Chlorine dioxide can pull a tremendous amount more electrons but only electrons that will come away with the weak electric pull of MMS (chlorine dioxide). Thus MMS cannot damage body cells as they all have a higher oxidation resistance than MMS has an oxidation pull.

So again, **chlorine dioxide can kill many diseases in the human body that oxygen, ozone, and other oxidizers cannot kill.** All oxidizers, including of course, oxygen, hydrogen peroxide, ozone, and the other oxidizers are neutralized as they oxidize things. This is because the oxidizer accepts electrons of the things that are being oxidized. When you tear these electrons away the item being oxidized (the disease pathogen) is no longer held together by the electrons and it is destroyed. Because of the high oxidation potential of oxygen as it begins to penetrate into the tissues, it oxidizes many things including various poisons, but this neutralizes the oxygen as well, and thus in the case of many diseases the oxygen is normally neutralized before it penetrates to the area where the diseases hide. This is a characteristic of oxygen that is needed to keep the body free of poisons. It oxidizes hundreds of poisons created just from day-to-day living but these poisons are not deep in the tissues.

Chlorine dioxide (MMS) neutralizes the poisons that the pathogens of disease create, plus it kills pathogens. One can get very technical about this and many critics who have no idea what MMS does claim that there is no such thing that can handle all diseases. But the concept is simple. MMS kills disease poisons and pathogens in thousands of water works, hospitals, and many other places throughout the world. It only matters that the poisons are in the correct range and the pathogens are disease causing pathogens. It just happens that chlorine dioxide has the correct characteristics to kill the diseases. If chlorine dioxide can kill disease pathogens and poisons in hospitals, public water works and other places, it stands to reason that the same thing can and does happen in the human body.

**Viral diseases are also killed by chlorine dioxide.** This is not true of pharmaceutical drugs. Pharmaceutical drugs simply do not kill viruses. Viruses are killed by chlorine dioxide by a different mechanism. In the presence of MMS, viruses are prevented from growing. After a few hours of being unable to grow, the viruses are inactivated. It normally can take from one to three weeks to get them all, however sometimes, depending on the strain and severity of the virus, it can take much longer.

Again, as I mentioned above, chlorine dioxide does not cure. Chlorine dioxide oxidizes diseases because disease pathogens have a low oxidation potential and chlorine dioxide can penetrate to where the diseases are. But it is important to remember that chlorine dioxide only kills the disease, it does not cure or even aid in delivery of nutrients that help the body to heal. Once the disease is oxidized (pathogens are killed) and those poisons that are deep in the tissues are oxidized (chlorine dioxide oxidizes hundreds of poisons) then the **body heals the body**. At this point the immune system can then be strengthened and rebuild if proper care is given. The details given here regarding oxidation are not complete, but are given to show the very basics of MMS.

### What MMS is NOT

I would like to address the issue that critics bring up, and that is that MMS is bleach. There is a big difference between household bleach which is the chemical sodium hypochlorite and MMS which is the chemical chlorine dioxide. Every year several thousand people are hospitalized because of household bleach, but this is not the case with chlorine dioxide whether used in industry, public water purification, or as MMS. The difference is that household bleach which is sodium hypochlorite, uses *free chlorine* for bleaching and that is the danger. The substance we talk about here in this book, which is MMS, (what critics call bleach) has no free chlorine available and in normal circumstances there is no way to extract free chlorine from chlorine dioxide and/or sodium chlorite. Can MMS take the color out of clothing? Yes, sometimes it can, but so can many other things remove color from your clothes, or “bleach” an item if you choose to say it that way, including a fresh lemon, or the sunshine for that matter.

Chlorine dioxide (MMS) is a chemical that is used worldwide as a bleach for cotton and paper, as a killer of pathogens on vegetables, in more than 1000 public water works to purify water, and hundreds of other things in industry. It can kill pathogens in the water of the human body when it **has been diluted a couple of thousand times by water**. It cannot harm the human body in any way unless one takes way, way too much which is exactly the same as any other substance including simple things like salt and sugar, even drinking too much water can cause harm. After 22 years, millions have used it and there still are no confirmed reports of deaths or permanent injuries of any kind attributed to MMS. Consider that against the hundreds of thousands of deaths and problems caused by

pharmaceutical drugs. When MMS is **taken according to instructions**, one is 99.99% safe.

Because there have been critics who have tried to discredit MMS by saying that it is “bleach” or it is derived from bleach, I would like to further explain some basics. To thoroughly cover this subject, it is necessary to delve quite deeply into chemistry. However, the basics are quite simple and that is what I will give you here. Although chlorine dioxide ( $\text{ClO}_2$ ) and table salt ( $\text{NaCl}$ ) both have the chlorine element in its composition (again, note the “Cl” in both formulas stands for chlorine), in this case the chlorine is in a form that is not dangerous and is in fact helpful. On the other hand, household bleach which is sodium hypochlorite ( $\text{NaClO}$ ), also has Cl in the formula, but in this case the chlorine (Cl) is in a different form and can be, in some cases, very dangerous. (Please note that these three substances, although they all have “Cl” in some form in the formula, are all completely different.)

You can look on the internet for the MSDS (Material Safety Data Sheet) for this information. This safety data sheet shows under “Stability Data” that sodium hypochlorite ( $\text{NaClO}$ ), which again, is household bleach, can react with toilet bowl cleaners, rust removers, vinegar, acids, and ammonia products to produce hazardous gases that have caused hospitalization and even death. When mixed with various tap waters and brought in contact with the human body it can produce chemicals that are cancer causing, which chlorine dioxide and table salt cannot do.

Chlorine dioxide is manufactured in one of several different processes from minerals and chemicals taken from the naturally occurring mineral, sodium chloride ( $\text{NaCl}$ ), which is actually table salt. So, common table salt, sodium chloride ( $\text{NaCl}$ ) through various manufacturing processes becomes sodium chlorite ( $\text{NaClO}_2$ ). Chemically this is done by adding two atoms of oxygen ( $\text{O}_2$ ) to each molecule of salt ( $\text{NaCl}$ ) to produce ( $\text{NaClO}_2$ ) which is sodium chlorite. Then when this sodium chlorite is mixed with a weak food acid it becomes chlorine dioxide ( $\text{ClO}_2$ ) which is the main active ingredient in MMS.

Chlorine dioxide has hundreds of uses in industry and it is often used at many times stronger than the MMS health recovery solution I have formulated. Our standard dose of 3 drops of sodium chlorite solution (22.4% sodium chlorite in water) in 4 ounces/120 ml (1/2 cup) of water

does not make any kind of a solution that can be called “bleach” referring to something strong enough to clean a toilet, etc. Critics that talk about MMS being bleach highly exaggerate and distort the matter. They like to use the word “industrial” in a tone that is blown way out of proportion. Is chlorine dioxide used in industry? Yes it is, but in a totally different concentration or way than MMS is used. There are many things used in “industry” that we ingest every day — much of the food we buy in the supermarket comes out of industrial plants of one kind or another. I would caution you to watch out for the doublespeak of the media and how they purposely try to twist, distort and plant the wrong idea in people’s minds.

Critics of MMS only succeed in unnecessarily scaring people and causing those they scare to continue suffering or even die. Just look at the formula —  $\text{NaClO}_2$  (sodium chlorite/MMS) it is different than  $\text{NaClO}$  (sodium hypochlorite/household bleach) — different formula, different substances. So be smart, don’t let others fool you!

**In Summary:** Although the chemical formula for chlorine is “Cl”, the chemical formula Cl is also found in the chemical formula for chlorine dioxide ( $\text{ClO}_2$ ), and it is also found in the chemical formula for table salt ( $\text{NaCl}$ ). Chlorine dioxide is totally different from common household bleach (sodium hypochlorite, which also has Cl in its chemical formula,  $\text{NaClO}$ ) which is toxic and known to be cancer causing. Chlorine dioxide ( $\text{ClO}_2$ ) is not cancer causing and has an amazing ability to destroy (through oxidation) disease-causing microorganisms that may be on or in the human body, while doing no harm to the body. Because of the chemical nature of chlorine dioxide, it destroys these microorganisms in such a manner that it is also destroyed at the same time, leaving behind only a few grains of plain table salt, discharged oxygen atoms, and dead microorganisms, which the body can easily wash out of the system.

## CHAPTER 6

### **SNEAK PREVIEW ON HOW MMS PROTOCOLS WORK**

So the good news is this — there *is* something that can help people take responsibility for their own health and get positive results. Mankind can heal themselves by themselves! If you are sick, tired, in pain, weary or worn out, if you have a chronic disease, if you have a life threatening disease, there is hope. There is an answer! You may have to work at it a bit, I will be honest, there is no magic bullet. You will not necessarily have an overnight transformation (though there have been some). But the answer is, you can get well. It is doable, it is reachable, it is attainable. It doesn't have to burn, poison, cut or mutilate you — and it is affordable!

It is a step by step process. MMS is a substance that can start you down the road to good quality vibrant health! It is the first step to get rid of disease pathogens, then the immune system can be strengthened and the body can heal the body. There will be more steps to take. One will likely have to take a look at some lifestyle changes if needed, perhaps a change in diet, adopting practices that help eliminate stress, getting proper exercise, getting enough rest and so on, but it's all achievable! You can heal and this is something that can set you free.

**If used correctly, MMS can help overcome the diseases of mankind.** I have worked with people all around the world for over 22 years, helping them to recover their health. During this time, I received a great deal of feedback from people which helped me further develop the protocols using MMS (sodium chlorite + a food grade acid = chlorine dioxide). These protocols have proven very effective in helping people restore their health from a very wide range of disease and illness.

In recent years I took time out to put all my updated protocols in a book called the *MMS Health Recovery Guidebook*. After 22 years of working with MMS and thousands of people around the globe, my intention with this book was to share with the world in a clear and concise way how to recover their health with MMS. Through my experience I developed a Health Recovery Plan. This plan is clearly outlined in the *MMS Health Recovery*

*Guidebook* and **if followed correctly**, it can help eradicate nearly every disease known to man. We have thousands of testimonials that says this is so. In this book because of space I am including only a few (*see Chapter 12*). But for more testimonials search on the internet and check out: <http://mmstestimonials.co/>

In some ways I hesitate to give you even a portion of the detailed plan here, as all the correct details and what to do or not do are in the book in a clear and concise format, and **you need to know the details**. Nevertheless, to give you an idea, here is a very basic overview of what recovering one's health with MMS entails:

Basically, one will need to take MMS in hourly doses for 8 to 10 hours a day depending on the need. This will be necessary for anywhere from one to several weeks, again, depending on the need. Many illnesses and diseases are easily taken care of in a three week period, but it depends on the disease, the person, and various other factors.

A dose of MMS consists of mixing drops of MMS (a 22.4% solution of sodium chlorite in water) with drops of a food acid. The most commonly used acid is either 4% HCl (hydrochloric acid), or 50% strength citric acid. Other food acids can be used, details are in the *Guidebook*. When the drops of both the sodium chlorite and the activator acid are used in these percentages you mix them drop for drop, in other words, 1-to-1, and count to 30 seconds until the mixture turns an amber color. This process is called activation or activating your MMS. After 30 seconds you must add ½ cup (4 ounces/120 ml) of water to the drops and then immediately drink it down. This is a basic dose of MMS.

The amount of drops one should take for each dose varies according to the illness, the person, and how their body is reacting. Everyone however, should start out slow. I have a protocol for this which I call the Starting Procedure. You start out the first day taking only ¼ drop of MMS each hour. If all goes well and there are no signs of what is known as a healing crisis, also known as a Herxheimer Reaction, (this could include nausea, diarrhea, headache, etc.) one can continue the next day taking ½ drop of MMS each hour for 8 hours a day. If all continues to go well, on the third day, again take ½ drop an hour. On the fourth day if all is well, increase to ¾ drop and hour. After the fourth day, on day five you go on to the next protocol which is Protocol 1000, which starts

with taking 1 drop an hour, then build up to 2 drops an hour and then to 3 drops an hour. Stay at 3 drops an hour for 8 hours a day for a 3 week period.

During this time, if at any time you feel nausea, or signs of diarrhea or any other signs of sickness that makes you sicker than you already are, immediately cut your dose by 50% but do not stop. In other words, one may have to go at even a slower pace than is described above. Listen to your body. It is not a race, taking more MMS is not synonymous with getting well necessarily. You have to go at the pace your body reacts well to. Most people will not need to go beyond 3 drops an hour for many illnesses. We are talking about taking activated drops of sodium chlorite (which produces chlorine dioxide) for 3 weeks. Some people will need to continue for a longer period of time, and/or need to go to the next higher protocol, or add on some Supporting Protocols (using a spray bottle externally, taking baths, or doing douches or enemas with MMS, and so on). Much depends on the illness and the physical condition of each person.

Again, as I said earlier, I hesitate to give these basics, because the **full instructions and details which are very important**, are all summed up in the *MMS Health Recovery Guidebook*. This “brief” however is to give you a basic idea of what the protocols entail. Please know that there are important specifics one must know, such as some things you should avoid while taking MMS, (caffeine, orange juice, foods very high in antioxidants, drinks that contain Vitamin C or Vitamin C supplements and others) and so on. I have found over the years that if MMS does not work, it’s nearly always because one is doing something wrong to cancel it out. So please read the Guidebook and get the full picture.

While there is no special diet one must follow while on MMS, there are some guidelines on how to eat during the actual hours you are taking doses. So you see, there are some do’s and don’ts if you hope to recover your health. This is why I highly suggest anyone serious about recovering their health from life threatening or other illness, or anyone who wants to take preventative measures to stay healthy and maintain optimum health should read the *MMS Health Recovery Guidebook* (for getting well) it is available at: [www.jhbooks.org](http://www.jhbooks.org).

I want to interject here, after reading this overview of what recovering one’s health with MMS may entail, it might leave you feeling a little overwhelmed.

For some people, stopping to take a dose every hour or following the do's and don'ts of a health plan is not appealing. Let me just say, it's really not all that difficult. MMS is not rocket science. Preparing and taking a dose of MMS takes all of 30 to 45 seconds. The question to ask yourself is — what is your health worth to you? If you are in poor health, it probably took you a fair bit of time to get there, so a little effort to get well can be expected. Once you learn the basics of MMS, again, it is not difficult to follow the protocol and in my opinion much easier and affordable, yielding better results, than many other options.

The *MMS Health Recovery Guidebook* will give you more complete, detailed, specific information and instructions for the use of chlorine dioxide and sodium chlorite. For more data as to the wonders of MMS, read the rest of this book and look up the links and articles given herein. This is the truth that can bring health freedom to the world.

## CHAPTER 7

### **ANOTHER SUBSTANCE — MMS2**

MMS2 is a chemical that the body produces on its own. The body makes it on a continuous basis, and it is something that the human immune system naturally uses. In other words, it is produced in the body. This isn't something I have thought up. There are research papers that explain this and it has been known for more than 50 years.

If medical science was looking to cure people, you would think they would have discovered these things long ago and connect the dots. This substance has been here all along. I am not a brilliant scientist — but just a normal inventor from backwoods Alabama, and yet I found that this amazing chemical could help the human body eradicate disease. And so I brought it to the public. As far as medical science goes, I would think the logic should have gone something like this:

“Hmm, let's see now, this particular chemical is used by the immune system to kill pathogens and other organisms that the body needs to get rid of, and this same chemical is used in industry to kill pathogens and other organisms. I wonder if we supplied the body with a little extra of this chemical, would it be better able to kill pathogens seeing as the body is already using this chemical? Maybe the body doesn't have enough of this substance when under an attack from a lethal disease.”

It's so obvious that, in my opinion, medical science should have come up with several miracle substances long ago. It's probably pretty hard to understand why medical people haven't been using both MMS and MMS2 to enhance the immune system for at least 50 years, but they never have. Amazing!

MMS2 comes from the chemical calcium hypochlorite—when calcium hypochlorite is dissolved in water it turns into hypochlorous acid, (which is already naturally produced in the body) and this is actually an oxidizer. The body naturally uses the oxidation capabilities of this acid (hypochlorous acid) to kill germs and other unwanted items.

## Calcium Hypochlorite

The immune system uses an acid called hypochlorous acid to kill many things including disease pathogens. Outside the body, hypochlorous acid is produced when a chemical called calcium hypochlorite is mixed with water. One of the chemicals that the body manufactures in order to make hypochlorous acid is called myeloperoxidase. It is known that myeloperoxidase is often deficient in the human body. So likewise, there is often not enough hypochlorous acid in the body.

This is known by medical science. There are articles written about it. (Go to Google and search “myeloperoxidase deficiency” and you will find a lot of articles are listed.) So, one would have thought that medical science would have simply given sick people some extra hypochlorous acid when needed. But guess what, it never happened. But I did it.

Well, I was only partially that smart. Actually some years back, my next door neighbor came over one day and said that calcium hypochlorite killed germs in swimming pools and it might just be another MMS. He suggested that we try taking small amounts and see what happens. I figured if he was game to do it, I was too. We made up some gel capsules with calcium hypochlorite in them and started taking them and everything was fine. Then a few people who had prostate cancer took them. At the time, people with prostate cancer were the only ones available who were willing to test the new capsules. As far as I know, not a single person who originally took these capsules failed to get better or completely recover.

As I researched, I realized that the calcium hypochlorite was turning into hypochlorous acid, and this is what was helping people. More and more people started to try it and were getting positive results. Especially those who received a death sentence from the medical people, who had little hope of survival and were told they would die anyway, were willing to try. There are a number of people alive today who are glad they chose to try it.

So there you go, calcium hypochlorite turns to 100% hypochlorous acid when dissolved in water. However, you can't buy it in 100% pure form. It comes anywhere from 55% to 80% pure. In general, don't use anything less than 68% pure, as the lower percentage products have clarifiers and stabilizers in them. But in a pinch, even those could be used.

MMS2, calcium hypochlorite, is sometimes known as Pool Shock. It is sold in pool stores and grocery stores throughout the world. The package will say it contains somewhere from 45% to 85% available chlorine. This is not true. As long as you have calcium hypochlorite (**not** sodium hypochlorite, which does produce chlorine) there is no available chlorine. When calcium hypochlorite,  $\text{Ca}(\text{ClO})_2$ , is dissolved in water it turns into hypochlorous acid ( $\text{HOCl}$ ) and there is no chlorine available.  $\text{HOCl}$  (MMS2) is the same acid that your body naturally generates to kill disease and destroy poisons.

When you take MMS2, you are giving your body more of its own ammunition against disease. The microorganisms in a swimming pool are killed by the calcium hypochlorite which is turned into  $\text{HOCl}$ . Manufacturers only say there is “available chlorine” in order to make the calcium hypochlorite sell, as many in the world unfortunately still think that chlorine is a safe and effective product for killing microorganisms — and it is a common mistake to mix up these terms. Chlorine, which is sodium hypochlorite ( $\text{NaClO}$ ), will kill microorganisms, but it also is harmful to the human body. Calcium hypochlorite, which when added to water produces hypochlorous acid, will also kill microorganisms, but it is not harmful to the human body and does not contain the chemical “chlorine.”

### **How Does Hypochlorous Acid Work?**

To give you a little more data about hypochlorous acid and why it works in the body, let me mention a few more details. As already mentioned, hypochlorous acid is an acid used by the immune system to destroy pathogens and other microorganisms in the body that are necessary to destroy. It is also an oxidizer on top of being an acid. The mechanism is somewhat different than MMS (chlorine dioxide). MMS oxidizes the pathogens directly, pulling away the electrons that hold their molecules together. MMS2 (hypochlorous acid) acts in a different manner. It destroys microorganisms by carrying oxygen to the microorganism and the oxygen destroys the organism. Of course, once the hypochlorous acid delivers the oxygen, the destruction is the same. The oxygen pulls off the electrons that hold the pathogen together which is oxidation.

### **This is the basic idea of the chemical process:**

1. The oxygen released by the hypochlorous acid is known as nascent oxygen. That means it is extra active and much more powerful than oxygen normally is, but only for a short period of time. In this case that short period is plenty long enough to do the job.
2. The formula of the hypochlorous acid is HOCl. As the HOCl gets near a pathogen HOCl pulls off a single electron. This electron comes over to the HOCl and destroys it releasing the oxygen (O), the hydrogen (H), and the chlorine (Cl). The oxygen that was released then destroys the molecule in the pathogen. The hydrogen just becomes part of the water of the body, and the chlorine becomes a chloride which is table salt. Nature picked this acid for use by the immune system to travel throughout the body and into areas where the oxygen obtained from breathing does not reach.
3. The hypochlorous acid acts as a carrier. It carries the oxygen to places it cannot get to when traveling as oxygen. Traveling in the hypochlorous acid, it is kept separate from various body parts that it could oxidize, and when the hypochlorous acid reaches a hidden pathogen deep in a tissue, it releases the oxygen (as mentioned in #2 above), in a nascent condition, to do its job. It is an important mechanism that no pathogen has ever developed a resistance to.

### **Hypochlorous Acid and Table Salt**

Here is one more important point that you should know. Some people may worry about being poisoned by MMS2 because it smells and tastes bad. Well, the poison index for MMS2, that is calcium hypochlorite which then produces hypochlorous acid, is almost the same as for table salt. The actual poison index is 850 mg/kg of body weight. That's the amount that it takes to kill 50% of the rats being tested; the others, lucky for them I guess, live through the test.

However in the case of a human being, a real lethal dose would be considered 4 or 5 times the amount it takes to kill a rat. So if you were a human undergoing this test and you weighed 80 kg (176 pounds), one would multiply 850 (the poison index) by 80 kg to get the number of milligrams that it would take for a 50% chance of a lethal dose for a human

being. That is 68 grams and then 4 times that is 272 grams or 9.5 ounces for a 50% chance of a lethal dose for the 80 kg human.

Table salt would be about the same. Nine and a half ounces of either one would no doubt kill a grown person. But a little salt shaken on your dinner tonight or a single size zero capsule of calcium hypochlorite would be about the same amount, and neither is going to give you a problem. A size zero capsule taken every two hours during the day will kill the vast majority of what is considered incurable diseases.

### **Using Calcium Hypochlorite Capsules — an Overview**

Many people have taken calcium hypochlorite in gel capsules for a variety of diseases, and this is especially helpful if MMS (chlorine dioxide) is not available. The basic protocol consists of filling either a size 1 or size 0 capsule with the calcium hypochlorite powder or flakes (make sure you have a good product). Always start out very low and build up to a full capsule if using size 1 capsules and to  $\frac{3}{4}$  full if using size 0 capsule. If at any time you feel nausea, headache or uncomfortable symptoms, you are going too fast, so use less. You can take from 1 to 5 capsules a day while treating cancer or other life-threatening diseases. (MMS2 capsules can be taken every two hours. **Never take MMS2 at the exact same time that you drink an MMS [that is an activated sodium chlorite] dose.**) **Please know this is a basic overview only. There are important details you should know before you try this,** so be sure to get the full details in my book *MMS Health Recovery Guidebook*.

## CHAPTER 8

### HELP REJECTED — MALARIA, ALS, HIV/AIDS

In the years that followed my initial discovery (in the jungle of Guyana), that MMS eradicated malaria I worked to further improve the MMS formula. Eventually a missionary group invited me to Africa where I successfully helped over 5,000 malaria cases and victims of other diseases recover their health. Since that time, hundreds of thousands of people have used MMS to recover their health from a wide range of diseases. In spite of my diligent work to get MMS into the mainstream news and make people aware, it appears there are those who would rather not support my findings even when they themselves have found it successful.

#### The Red Cross Field Test — a Brief

In December of 2012, The Water Reference Center (WRC), an affiliate organization of the Red Cross, performed a documented field test in Uganda where 154 malaria patients were treated using sodium chlorite (the key constituent of MMS). All 154 patients were cured of malaria within 24-48 hours of treatment. The WRC and the Red Cross insisted on keeping the results quiet. Eventually the results were made public in May 2013 via an amateur video produced by the one who trained the staff on how to treat malaria. Unfortunately, on May 15, 2013, the Red Cross dissociated itself in the strongest terms from the test and its results. Soon thereafter, a professional video produced by the WRC was discovered and released (leaked out to the internet) showing the details of the test along with glowing statements by Red Cross officials.

See: <https://www.youtube.com/watch?v=5jY2yab0uLc>  
<http://ifrc.org/en/news-and-media/opinions-and-positions/opinion-pieces/2013/ifrc-strongly-dissociates-from-the-claim-of-a-miracle-solution-to-defeat-malaria/>  
[http://mmswiki.org/index.php?title=Red\\_Cross](http://mmswiki.org/index.php?title=Red_Cross)

I find it interesting that the IFRC (International Federation of Red Cross and Red Crescent Societies) **do not deny the effectiveness of MMS**, at the same time they offer to do a clinical study of their own. Rather, they

simply state their adherence to the “party line” of the WHO (World Health Organization) treatment regimen.

Of course, MMS, like anything else, must be used properly and carefully. Even aspirin can be overused. But when considering various accusations, consider the source and... “follow the money.” A lot of profits could be lost if the status quo is changed significantly, especially regarding a major disease like malaria.

## **Red Cross Cured Malaria Using Chlorine Dioxide in 2012**

Below are pictures and other data from the Red Cross video “Proof the Red Cross Cured 154 Malaria Cases with MMS.” It was 154 cases of malaria cured out of 154. Although the Red Cross denies it, and there are those who try to prove it was a false test, it was videoed by three separate groups. Each group maintains that the videos are authentic and since thousands of malaria cases have been successfully treated since that time and even before the videos were made, we claim the videos are authentic.

None of the critics bother to explain that if what they say is true, why would we fake such information? What would be our motive? It has been more than 22 years now and more and more people are using MMS. When something doesn't work people quit using it. I have never sold MMS and I don't make money from the sale of MMS. Yet it sells around the world. It is made in people's homes and shops. There is no big factory making it. I'm not rich and I'm not getting rich from selling MMS. I sell books, that's all. I did not patent using sodium chlorite/chlorine dioxide (MMS) for overcoming diseases.

I should mention that more than a dozen people from the Red Cross conducted the “Malaria Test” and more than 750 people were part of the test. With that many people involved the Red Cross can claim that they didn't do the test as much as they want, but in the final analysis they did do it.

I was told by a top official in the Red Cross (his name is Klaas Proesmans CEO of the Water Reference Center of the International Red Cross), that this test was to prove once and for all that chlorine dioxide is **not** effective against malaria. But this backfired on them, as in the tests MMS proved effective in eradicating malaria, and thus proving that chlorine dioxide is in fact effective against malaria.

After the test, the Red Cross kept putting off announcing this to the world, and after refusing to announce it for five months they put out a public statement saying that they “strongly dissociate themselves from the claim of a miracle solution to defeat malaria.” Furthermore, they claimed they were never involved in any “clinical trials” conducted in Uganda. Go to: [https://mmstestimonials.co/images/videos/LEAKED\\_-\\_Proof\\_the\\_Red\\_Cross\\_Cured\\_154\\_Malaria\\_Cases\\_with\\_MMS-FrwZN1cPfx8.mp4](https://mmstestimonials.co/images/videos/LEAKED_-_Proof_the_Red_Cross_Cured_154_Malaria_Cases_with_MMS-FrwZN1cPfx8.mp4) or go to: <https://mmstestimonials.co>

Meanwhile, below are pictures from the video to show you that the Red Cross official who claims he was never there at the Malaria test operation was indeed there. This is pretty drastic of the Red Cross, because millions of people have died since they claimed they were never there. But it should be noted that the Red Cross never said that chlorine dioxide (MMS) does not cure malaria. They said, “they strongly dissociated themselves from the claim of a miracle solution to defeat malaria.” Now why do you suppose they put it that way?

***Excerpts from the video “Proof the Red Cross Cured 154 Malaria Cases with MMS” (or go to: [https://mmstestimonials.co/images/videos/LEAKED\\_-\\_Proof\\_the\\_Red\\_Cross\\_Cured\\_154\\_Malaria\\_Cases\\_with\\_MMS-FrwZN1cPfx8.mp4](https://mmstestimonials.co/images/videos/LEAKED_-_Proof_the_Red_Cross_Cured_154_Malaria_Cases_with_MMS-FrwZN1cPfx8.mp4) for the full video)***

***Introducing the Red Cross Video – Talk by Jim Humble (given in 2013)***

Hi, I’m Jim Humble. In the late 1990’s, in the jungle of Guyana, South America, I discovered a cure for malaria. A disease that now kills about 1.2 million people a year. Since then I’ve diligently worked to get this discovery, which I call MMS, into the mainstream. It appears there are those who would rather I and my discovery go away... In late 2012, Leo Koehof, one of my associates, along with the Uganda Red Cross, the International Red Cross and the Water Reference Center came together to perform a test. The purpose was to once and for all determine if MMS really works (or rather that it does not work). Something I and others had proven many times over. During this test 154 malaria victims were treated and easily recovered their health, to the surprise of the Red Cross staff.

Then, to our dismay the Red Cross dragged their feet in making the announcement for months refusing to announce the results. Finally, when we pushed the issue, they came out with a public statement saying they strongly dissociate themselves from the claim of a ‘miracle’ solution to defeat malaria. Furthermore, they claim they were never involved in any “clinical trials.”

There were three different people from around the world who documented the test by video, not including the actual medical documents the Red Cross generated. One was our man Leo, who released his video in 2013. Then, there was a local Ugandan video guy, and another, I believe, from Holland. (Note added later: These videos are all on YouTube as of February 2019. Hopefully they will still be available by time you are reading this.)

Then, we were informed that the guy from Uganda had completed a video that unquestionably documents that the test really happened. This video has been sitting on YouTube unlisted...since January of this year (that's 2013). I now invite you to watch this revealing video that proves MMS...which is sodium chlorite plus an activator...eradicates malaria...a video of a test that supposedly never happened.

*END OF INTRODUCTION*

***Excerpts from Klaas Proesmans talk in the Video***

“My career was always about getting high results while under a lot of pressure with very few tools. I finally got into humanitarian operations. We came across a number of interesting technologies — always in the fields of water, health, energy. We came across one of those purifying systems that already existed probably for over one hundred years and it is a purifying system based upon sodium chlorite. (Authors note: Sodium chlorite is used to generate chlorine dioxide which is MMS.) The first records of the use of this sodium chlorite was maybe 20 kilometers from my home town in Aalst where we had a spa and in that spa before the First World War of 1914 to 1918 they were able to help people with skin diseases, small infections, always with the use of sodium chlorite.

It has been said and written that the use of sodium chlorite cleans the body in one hour to four hours of malaria parasites. That was too good to be true not to go further into the investigation. Since we are affiliated with the International Red Cross we contacted a number of national societies where malaria is present. One of them was Uganda. We contacted the national society secretary general. We explained what the intentions were and we came over here just to look at the field to look at the steps that we needed to make to do this kind of testing, pilot case. We visited the national drug agencies, the Minister of Health, all the people that have something to do with public health and the purifying of water.” *END OF EXCERPT FROM KLAAS*

*Klaas Proesmans, CEO of the Water Reference Center, a branch of the International Red Cross.*

*Klaas arriving at the malaria test grounds in Uganda.*

*Klaas Proesmans working with Leo Koehof.*

*Examining blood for malaria parasites.*

*Using Malaria Test Strips – Blood is taken from the finger and dabbed onto the test strip which then indicates positive or negative results for malaria.*

*If the reading is positive, the patient was then routed to the microscope lab for an a blood test to verify a positive malaria result.*

*Paul Kaoweru, SMCO of the Luuka Distric Uganda Red Cross, gives a short talk on how impressed he is about Chlorine Dioxide (which is the exact formula of MMS).*

*Betty, the Certified Microscope Technician, tested the blood of all patients who had positive test stirp results. She then retested their blood the next day after the MMS dose.*

*"When I published my video of the Red Cross MMS malaria test on YouTube in May 2013, I was totally surprised by the comments I received. The Doubters suggested the video was faked and wanted more detailed information. At the same time, the Red Cross distanced itself... and even went so far as to say it never happened. This mis-information was put out by Klaas Prosemans himself, the one who initiated the test in the first place. He even suggested that the people wearing red cross t-shirts*

*just happened to come by to see what was going on, and had nothing to do with the test. Since December 2012, when the malaria test was conducted... and today, June 29th, 2013... we estimate that over 1 million children have suffered and died from malaria, based on yearly World Health Organization statistics. That's about one child dying every minute. It is clear from the statements by the Red Cross staff in the video... they are very happy to have found something that works so well against malaria, so they can reduce the suffering in their area. To date, the Red Cross has done nothing with the results, except, of course... to hide the truth and tell lies. This is equivalent to Genocide. I, as the one who showed the Red Cross staff how to use MMS, cannot allow this to quietly continue -- I need to remind the Red Cross, and all other humanitarian agencies, of their responsibilities. It is one thing to have a fear of losing one's job. But, when we contrast that to the millions of lives lost each year to malaria, it is time they stop being cowardly and step into the light of truth."*

*Leo Koehof*

Please understand the fight against malaria is not just a fight against sickness and a terrible death, but it is also a fight against poverty. Globally, the World Health Organization estimates that in 2016, 216 million clinical cases of malaria occurred, and 445,000 people died of malaria, most of them children in Africa. It is important to note that this statistic from the WHO is an estimate, and it is an estimate of clinical cases of malaria. Having lived and worked in Africa on several occasions, I would say it's more like about 500 million people contract malaria each year (and this figure is also quoted from other sources). Why? Many people in Africa never make it to a clinic. People in Africa live with malaria, they know when they have it. Some come down with it year after year. They often do not have the means, nor do they even bother to get tested to confirm they have it because they know the signs, the symptoms, and they know when they have it. One thing is for sure, because malaria causes so much illness and death, the disease is a great drain on many national economies.

In Africa this greatly affects the work force. When so many million people spend from two weeks to three months or more not working, it affects the poverty level to a large extent. In addition, there are many who need attention during the time they are sick with malaria. The extra personnel and nurses and doctors needed further contribute to absence from the work force. So the presence of malaria contributes a great deal to poverty. MMS can overcome malaria on earth once people accept the fact that it really does eradicate malaria.

## Handling Malaria in the Human Body

Malaria, is a terrible scourge to mankind. Because of this, I thought you might like to know about how MMS goes about killing malaria in the body. When a female anopheles mosquito infested with malaria bites a person, the malaria parasites (sporozoites) make their way to the person's liver. Every time you take a drink of MMS, some of the MMS is carried to the liver in the same amount of time, 1 to 30 minutes. This is because the blood system that carries the parasite to the liver obviously also carries the MMS to the liver. The MMS is very healthy for the liver as it oxidizes parasites, pathogens and poisons while doing no damage to the liver. This is because of its low oxidation potential that it can't do damage to the liver or the body. There is little or no chance that the malaria parasites in the liver will survive the MMS, especially if you are taking it every day while in a malaria infested area.

After a mosquito bites you, if you are not taking MMS, it takes six days for the malaria parasite to get into the blood stream, and at this stage, it does not yet make you sick. In six days merozoites (which are a result of the sporozoites being in the liver) erupt from the liver into the body. They pass into the blood through the lung blood capillaries and invade the red blood cells. Then it will be about two more weeks when the red blood cells begin to erupt creating the symptoms of malaria sickness. So you can see, if you were in a malaria infested area for a short period it could take up to three weeks (six days plus two weeks) before you would notice if you have contracted malaria.

The first thing you will probably notice is a meal will not digest well. The first time it will be just a slight indigestion. You will think nothing of it. You will consider you just had a meal that did not sit well. By the next meal the indigestion will be worse and you may still think nothing of it. But after several more hours you will probably feel a small fever and your body will begin to feel achy all over. You really won't feel much like eating the next meal. You might even vomit if you try to eat something. This would definitely be the time to take an 18-drop dose of MMS. If you do not have MMS, the next best thing would be Quinine Sulfate and if that is not available try to get MMS as all the other malaria treatments are derived from Quinine but have other additives which are all bad for your health. For the most part there is Doxycycline, Mefloquine and a combined dose of Atovaquone and Proquanil. However these all have side effects that in many cases are as bad as the disease. They work slowly and can take up

to 2 weeks to overcome the malaria, and sometimes they don't. MMS is the only choice that has no lasting side effects and can work as quickly as four hours and normally overcomes 100 cases of malaria out of 100 if used correctly.

When you do begin to get sick due to malaria, it's because the parasites are beginning to break out of the red blood cells, releasing poison into the blood, which then creates the symptoms of malaria. This will bring about anemia (deficiency in red blood cells) caused by the parasites. At this stage of the disease is usually when the victim will take the MMS. The average dosage used for adults with malaria is 15 to 18 activated drops. (You would give a child less, and evaluate a child's dose by his weight.) The Red Cross used 15 activated drops in their 100% success rate MMS vs Malaria study in Uganda, December 2012.

Above I said the average adult dose for malaria is 15-18 drops of MMS. This is because we have found that different areas in Africa and the world require a different number of drops. Malaria varies in the strength of the disease from region to region. There are four strains of malaria that affect humans, however those four strains vary widely in their strength or weakness from region to region and therefore in their resistance to MMS oxidation power.

I learned that when going into a malaria region it is important to determine the strength of malaria that is present. Normally a single dose of 18 activated drops of MMS will kill most malaria strains in an adult, but unfortunately not always. For some malaria areas in the world it takes up to 30 drops in a single dose to knock out malaria, while in other areas it takes as little as 6 drops to totally kill malaria in an adult. Over the years, I have also learned if one is not showing any signs of improvement after about four hours, it is wise to give another MMS dose of the same strength. If you are going into a malaria area, and especially if you are someone who has the desire to help people on a larger scale in a malaria zone, there are other details that are important to know regarding how to help people recover from malaria using MMS. There is neither time nor space in this book to give you thorough instructions on how to eradicate malaria with MMS. This information, along with how to determine malaria dosages for adults and children can be found in the *MMS Health Recovery Guidebook*.

When MMS is swallowed it passes into the stomach. Providing the person does not take orange juice, coffee, tea, milk products, or foods very high

in antioxidants, the MMS will pass to the lower stomach where the food is being digested with stomach motion and a strong stomach acid (which is hydrochloric acid). As you will learn in this book, it may be possible if you have it, to use Aerobic 07, Stabilized Oxygen, Dioxychlor, or Bio-Chlor-Dox to eradicate malaria as well, but you would have to experiment a bit to get the right dosage. (*See more about these products in Chapter 11*) The drops from the products listed above will go to the stomach where it will be activated with stomach acid. Normally in almost every case this will create enough chlorine dioxide to eradicate the disease. In the case of MMS there will already be chlorine dioxide in the solution and the stomach acid will create even more.

Also in every case at the very top of the intestine, the pancreas releases an enzyme that kills the acid and leaves the chlorine dioxide slightly alkaline (very near neutral level, but it still is effective against malaria). The MMS will then be adsorbed into the side walls of the intestine where it is changed just a slight bit even more alkaline and matches the exact level of the alkaline blood as it is taken into the blood arteries. This is the point where the MMS will begin the attack on the blood cells that are infested with malaria parasites. An amazing thing happens at this time as the chlorine dioxide moves through the arteries of the body. The parasites are killed and the blood expels the dead parasites into the intestines which are carried out through the waste system. MMS also kills the poisons that cause the malaria sickness and the sickness is gone often times in as little as four hours. The sickness is gone and the victim feels normal. One of the worst diseases of mankind is killed in as little as four hours by chlorine dioxide and that fact has somehow been kept hidden by rich corporations with the help of official organizations and probably other groups.

### **More Cover-up as to the Effectiveness of MMS with Malaria**

I should also mention that the mainstream news has refused to publish the story about the Red Cross successfully treating 154 cases of malaria or even the fact that MMS kills malaria. What is worse than that is the news agencies have kept the world from finding out that MMS kills malaria in as little as four hours.

I once had a signed contract with the WHO (World Health Organization) to show them that MMS worked to overcome malaria. They turned the project over to one of their doctors in Switzerland. Now, there is no malaria in Switzerland, but he must have had methods of getting samples of the disease.

After a year and a half of sitting on his hands he finally called me and said that he had not been able to make MMS work on malaria. I asked him to tell me exactly what he had done. He said he had done dozens of tests with no results. After questioning him carefully, I found out that he was not activating the sodium chlorite with an acid. Basically he was working with malaria parasites in a dish on the lab table. Naturally it wouldn't produce any chlorine dioxide without the acid and thus it wouldn't even damage the malaria. I had, of course, given him complete instructions and he pretended he knew how to do it, but he did not know.

In a human stomach the sodium chlorite would have hit stomach acid and then make chlorine dioxide, but in a dish on the table it simply would not do that. He finally then said that he would activate his MMS, but he reported to the head office that it didn't work and I never knew if he actually activated his sodium chlorite or not. But the WHO reported to me that MMS doesn't work for treating malaria. It appears that was what they wanted and would not have accepted any other answer in any case.

Can you see how ridiculous this whole thing was? A doctor in Switzerland said chlorine dioxide is not effective against malaria and that was it. He did not ever work with any malaria cases, just malaria in a dish. That is from what he told me on the phone. I had no idea what he really did, maybe it was nothing.

## **Anecdotal Evidence**

So far in this chapter, I have shared with you about the Red Cross and the WHO and their apparent refusal to acknowledge that MMS can indeed eradicate malaria, or at least to look further into the possibilities and order more accurate testing done. As for me, I admit that I, along with many others, put a great deal of emphasis on anecdotal evidence. In the case of the Red Cross in Uganda, there was testing of the victims before, to prove they had malaria, and after to prove they were cleared of malaria. There have been many such tests done around the world by many people who have recovered their health with MMS. Many have medical tests before and after to prove they have been cleared from scores of diseases.

We also have much anecdotal evidence. Some scientifically trained people try to discount our evidence because it is anecdotal. When one has three or four anecdotal confirmations that may be somewhat questionable, but when the confirmations are in the thousands upon thousands, then that

---

changes things. Even science tells us that when there are thousands of cases of anecdotal evidence there is likely to be some correlation.

### **ALS (Amyotrophic Lateral Sclerosis) — More Rejection When Attempting to Give Help**

Another sad group of people who could easily be helped by MMS are people with ALS (aka Lou Gehrig's disease or Motor Neuron Disease—MND). I have personally seen two ALS patients recover. That is the total number I could reach, as ALS patients in general are kept away from others like myself who might help them. However, in addition to the two I was personally involved with, we have heard by word of mouth from a few others who found MMS and read my books, that they were able to help a loved one recover from ALS. And who knows if there are more that we have not heard about? It is a funny thing about illness, often when one is so terribly sick and then they get well, they do not want to dwell on what they went through. They do not want to remember the illness and therefore they do not always write to tell others about it. Some do and some don't — that's life.

### **What is Amyotrophic Lateral Sclerosis (ALS)?**

*Excerpt from article link below:* Amyotrophic lateral sclerosis (ALS) is a progressive disease of the nervous system, where nerve cells in the brain and spinal cord that control voluntary movement gradually deteriorate. This causes loss of muscle function and paralysis. The exact causes are unknown but are believed to include genetic and environmental factors. The symptoms of ALS vary depending on which muscles weaken first, and include loss of balance, loss of control of hand and arm movement, difficulty speaking, swallowing and breathing. ALS usually starts in mid-life and men are more likely to develop the disease than women. ALS is a long-term debilitating and life-threatening disease because of the gradual loss of function and its paralyzing effect on muscles used for breathing which usually leads to death due to respiratory failure. *END OF EXCERPT*

I would like to highlight here what is happening in Europe. ALS (amyotrophic lateral sclerosis) is treated in Europe using sodium chlorite. However, they have not discovered how to use sodium chlorite correctly for this particular disease. In other words, they are not following the proper protocol. Thus they treat it but get very minor improvements. I have tried and tried to get through to them but to no avail. It's sad they have not at

least considered what I have to say. So many people with different diseases could be helped if they knew how to use MMS properly.

The following article link is from The European Medicines Agency, 3013. Reproduction is authorized provided the source is acknowledged:

**[http://www.ema.europa.eu/docs/en\\_GB/document\\_library/Orphan\\_designation/2013/07/WC500145549.pdf](http://www.ema.europa.eu/docs/en_GB/document_library/Orphan_designation/2013/07/WC500145549.pdf)**.

***Here is an excerpt from the above article on how ALS is considered an orphan disease:*** What is the estimated number of patients affected by the condition? At the time of designation, ALS affected less than 1 in 10,000 people in the European Union (EU). This was equivalent to a total of fewer than 51,000 people,\* and is below the ceiling for orphan designation drugs.

\*Disclaimer: For the purpose of the designation, the number of patients affected by the condition is estimated and assessed on the basis of data from the European Union (EU 27), Norway, Iceland and Liechtenstein. This represents a population of 509,000,000 (Eurostat 2013).  
*END OF EXCERPT*

***Another excerpt from the same article:*** On 19 June 2013, orphan designation (EU/3/13/1139) was granted by the European Commission to Shore Limited, United Kingdom, for sodium chlorite (also known as NP001) for the treatment of amyotrophic lateral sclerosis.  
*END OF EXCERPT*

As I mentioned above, there have been some people who have been successful in overcoming ALS using the protocols in my book, the *MMS Health Recovery Guidebook*, which the medical doctors of ALS do not yet fully understand. I have come to the conclusion that they really don't want a clue. They will go on using chlorine dioxide wrongly and happily. Why? I am sorry to say, and I sadly conclude, follow the money! Thus far they have not listened to me and I have tried many times to communicate. Let's hope some good hearted, honest doctors will change this situation.

In my opinion MMS will overcome most ALS. But I have to choose my battles wisely as my time is limited. I have the choice of trying to reach ALS patients or actually helping thousands of people with a wide range of disease, including ALS, if anyone is interested in studying my methods via my books and videos. I've had to go where my time was most used by those who needed help. Although I did send letters to a major ALS organization

from time to time, but they were ignored. I tried to get through to people on online ALS forums but found no one who wanted to communicate so I spend my time elsewhere.

### **HIV/AIDS—Good News but More Rejection**

In 2009, I went to Malawi, a small country in southeast Africa. While there, 800 HIV/AIDS cases came to me. At the time, I was based in an Herbal Clinic where I taught people how to use MMS. Those with HIV/AIDS took only 3 drops of activated MMS every hour, for 8 hours a day, for 3 weeks. Guess what? The 3-drop doses, taken 8 hours a day, for 21 days, were nearly 100% effective in eradicating HIV/AIDS. There were only five failures out of the 800 cases, and of these five, instructions were not properly followed in one way or another.

Although these amazing results with the HIV/AIDS victims were clearly evident, I then met with opposition from various sides. First, I was asked to leave the Herb Clinic where I had helped most of the HIV/AIDS victims. I did find another outpost to base out of, but to make a long story short, there were folks in the Government Health Organization that were not happy with me. It wasn't long before I was served a paper to appear in court. I faced months of legal proceedings and a stay in jail. Fortunately there were about 10 men in the law force who wanted to help me and that was because all of these men had recovered their health with MMS. Because of this, I was able to work things out with paying a fine and leaving the country. But again, and sadly, many needy people at that time were left hanging, doomed to be sick and even die. What is wrong with this picture? Several years later I returned to Malawi. I was then able to train two local men to properly use MMS. These men have done a tremendous work and have helped many thousands to recover their health.

## CHAPTER 9

# PATENTS

In this section I have listed a number of patents which prove the ability of sodium chlorite and chlorine dioxide (MMS) to eradicate diseases. This information, however, has not been made known to the public for many years.

There are more than 100,000 patents regarding chlorine dioxide. I know it's hard to believe, but it's true and this number is conservative (check it out on the internet). The patents cover a wide range of uses of this chemical, which as far as I am concerned is more than any other chemical known today. Many of these patents date back to the 1930's. This number also includes the patent offices of Europe and other countries of the world. There are thousands of uses for chlorine dioxide and many believe that the usefulness of chlorine dioxide has just begun. The thousands of patents issued, I think, can be likened to an extreme amount of smoke and the many uses of chlorine dioxide is the fire. It will not be put out. If it were of no value, why would there be so many patents?

Chlorine dioxide and sodium chlorite are magical, wonderful, chemicals used for thousands of things. They are weak (weaker than oxygen), but extremely active oxidizers. Since they are weaker than oxygen and oxygen exists throughout the body without doing damage, we can consider that sodium chlorite and chlorine dioxide (MMS) will not harm the body. See Chapter 5 for further information on this.

The first patents concerning the use of chlorine dioxide to actually overcome diseases were issued in the early 1980's. Thousands of lives could have been saved if this data had been made known to the public. Sadly, as is often the case, the fake news media was instrumental in preventing this information from being known. They did and they have for more than 100 years used lies to cover the truth. Whenever it was shown that chlorine dioxide could cure a difficult to conquer disease, it was not made known to the public. But if thousands of people had been introduced to what chlorine dioxide could do back in the 1980's when patents were starting to come out on it in relation to disease. Well, like I just said, thousands could have been saved.

In 1996 I finally discovered what sodium chlorite/chlorine dioxide could do in regards to eradicating disease, and in the following years as I developed the formula, I did not have the means to get the information to the public in a big way. In addition, at the time, I felt I had to keep my operation and my data below the awareness of the general public and various agencies that stop such operations. In the beginning, I chose to take it to people who were really sick and needed it (starting with Africa) and thus it spread on a grassroots level to begin with. I felt if I would have advertised it in a big way, “they” would find a way to stop me just like many others who were on to “a good thing” were stopped in one way or another.

Can you believe it? I found a health drink that when used correctly would eliminate most all diseases, but I had to lay low because the news agencies and powers that be would have stopped me. But it just so happened that there were many before my discovery that were already using chlorine dioxide in some form (by way of the various products such as are mentioned in Chapter 11 of this book), and people were experiencing improved health with it. I just didn’t know at the time (and it appears others didn’t either) the extent to which sodium chlorite/chlorine dioxide could be used to actually wipe out disease. It wasn’t until I discovered in 1996 that my stabilized oxygen eradicated malaria that I was able to develop a formula with it that if used properly, could help overcome nearly all of the diseases of mankind.

Because I believe the knowledge of something as important as sodium chlorite and chlorine dioxide (MMS) belongs to mankind, in spite of the fact that I already had other patents, I decided to not apply for any patents concerning overcoming diseases using MMS. Who knows, maybe I couldn’t have made patents as there were already thousands of patents, but I didn’t know that. Thus, in spite of the fact that I and others working with me have proven in the past 22 years that chlorine dioxide, when used correctly, has the potential to overcome most diseases known to mankind, there are no patents issued to me or those working with me.

Let me reiterate the facts again. Millions of people have used MMS and hundreds of thousands of lives have been saved. It is time that all of mankind knows about the chemicals, sodium chlorite and chlorine dioxide and how to make MMS and how to use it if they so choose, because it has been helping people in one way or another for over a 100 years.

I mention this again, in case you have missed it — that is that chlorine dioxide is derived from sodium chlorite mixed with a food grade acid.

Sodium chlorite + acid = chlorine dioxide (MMS), which is what has been used to help hundreds of thousands of people with life-threatening or incurable diseases around the world on a grass roots level, well below the general public's knowledge.

As I have already mentioned, the first patents concerning chlorine dioxide were applied for in the 1930's although it was used as early as 1917 to overcome skin diseases. Since the 30's thousands of patents concerning chlorine dioxide and sodium chlorite have been applied for and issued for various uses, however; **patents for using chlorine dioxide to overcome diseases were not issued until the early 1980's**. At that time there began to be patents that gave information on overcoming human and animal diseases having to do mainly with curing incurable diseases. But this information was not publicized.

So from the early 1980's until I made my discovery (1996) and went on to develop a formula with it, information that sodium chlorite/chlorine dioxide can actually eradicate disease was not brought to public attention. As my discovery of MMS started to spread, critics started attacking MMS saying it cannot work. My guess is they had no experience with it, they probably never tried it, or never even listened to a testimonial of which there are many. They just "knew" it wouldn't work. There were also some MD's who were critics. They wrote scathing articles but again, my guess is their minds were made up, they did not want to be confused with the facts. They most likely never tried it, never studied the chemistry, and never listened to a testimonial, otherwise they would see. I am happy to say however, that today there are a growing number of medical doctors, nurses and other health care practitioners in many countries around the world who are embracing MMS.

There have been many reasons quoted by critics why chlorine dioxide (MMS) won't work. I won't list most of them (as it is more than obvious, they have not done their homework) but one reason that is sometimes brought up is that MMS has to kill both the good and the bad bacteria and other friendly microorganisms. As I said, my guess is that the critics probably do not have any valid experience with chlorine dioxide (MMS) concerning health in the body. They choose to report it to be a fact without studying the chemistry or using MMS in any way. They assume, and go as far as to state that there is no such thing as a chemical that can be selective in what it kills.

However, there is a company that has been selling chlorine dioxide for at least 50 years and this company has written many articles. The company is Lenntech. You can read their articles at: [www.Lenntech.com](http://www.Lenntech.com).

The government, FDA, EPA, and various colleges, quote many Lenntech articles. Some of their articles explain the chemical mechanism that allows **chlorine dioxide to be selective in what microorganisms it kills**. Thousands of companies and agencies and even universities accept their articles as true because they have been proven true. Go to the above link and check it out. I want to point out that every single one of their articles does not necessarily give the full details on the selectivity point, but if you read most of them you will find the details. The details are also given in this book, (*see Chapter 5*) for some non-technical technical facts for both the layman and the engineer regarding MMS.

**To Recap:** Chlorine dioxide has been the answer to wipe out diseases for more than 36 years, ever since the early 1980's when patents started coming out on how it can actually cure diseases in the human body. And sodium chlorite (the chemical that produces chlorine dioxide when mixed with stomach acid or food acid) has been around for about 80 years in the form of various sodium chlorite products that people have used to help improve their overall health (*see Chapter 11*). It is a secret hidden in plain sight because of the fact that modern pharmaceutical and medical groups say there is no such thing as a cure for many diseases and the fake news agencies back the claims of the medical groups.

MMS (chlorine dioxide) has the potential of overcoming most diseases of mankind when used correctly. I went grass roots with this technology and thus chlorine dioxide (MMS) is now being used worldwide by hundreds of thousands, probably millions, of people (based on feedback we receive). To learn more, read my book the *MMS Health Recovery Guidebook* (available at: [jhbooks.org](http://jhbooks.org)). This book is the result of 22 years of working with people all around the world. It includes my most up-to-date protocols and gives important details on how to use MMS properly to recover health.

Below I have listed 40 patents, nearly all of them are concerning curing diseases. I have included their abstract write ups as given in the patent office. The abstract tells what the patent is about. If you wish to know more, the full patent can be obtained from the United States Patent Office or from: [patents.google.com](http://patents.google.com) — simply enter the patent number into the search box and you can read or copy the entire patent. You will find that

Google has the patents organized in a user friendly fashion, making it easy to find what you are looking for. Hopefully this information on Google as well as the US Patent Office will remain available to the general public.

The patents listed below show that chlorine dioxide treats various diseases. Keep in mind that the patent office does not issue patents for no reason or at the drop of a hat. You must prove your claim before they will issue the patent. There are far too many patents concerning chlorine dioxide to list in this book. For practical reasons I have only included, relatively speaking, a few (40) here to give you a sampling, an idea of what is claimed about chlorine dioxide in patents. But know that there are many, many more than what is listed in this book. Again, you can go to the United States Patent Office to read or download a copy of any patent I have listed free of charge.

I know I mentioned it above, but let me say it again: There are more patents concerning chlorine dioxide than any other chemical by far — and I mean like thousands more. A small portion of those patents actually address chlorine dioxide treating or overcoming or curing various diseases, however even a small part of 100,000 is still quite a few. It still proves that the ability to overcome disease has been known, and subsequently suppressed for over 36 years, the real truth is that for 100's of years someone has known the herb or plant or chemical to overcome most of the diseases. It's just that the fake medical science has claimed only they can know how to treat diseases and only drugs can treat diseases, but the opposite is true. **Drugs don't treat diseases, they treat the symptoms of diseases.**

As you continue reading, please understand the **language of patents**. One cannot say that anything cures a particular disease. You cannot patent the curing of a disease. There may be a million ways to cure a disease. All of them might be patentable, but the curing of the disease itself cannot be patented as that would allow for only one patent for each disease, and there might be many simpler ways to cure the disease. So you can only patent a particular treatment of a disease. All you have to prove is that it is a treatment for the disease.

So here are 40 patents, nearly all of them concerning overcoming of diseases using chlorine dioxide (MMS). I have included some patents showing MMS is effective against blood problems and even solving bee problems, showing the wide range of use of MMS.

To save space and simplify things, we have reduced the full abstract of some of the following abstracts to only the first few lines of the actual abstract. You will notice some of them have the same wording in the abstract, but those with the same wording do not have the same patent numbers, thus if you read the patent in its entirety you will see it is different in some way. To read or obtain the full abstract or full patent visit: [patents.google.com](http://patents.google.com) or the United States Patent Office.

### 1. ANTI-PLAQUE, ANTI-PERIODONTITIS

*Patent US4788053A Granted 1988 11/29*

**ABSTRACT:** The use of stabilized chlorine dioxide as a composition for the treatment and prevention of oral disease and the reduction of oral malodor is disclosed. Chlorine dioxide is an effective anti-plaque agent, anti-gingivitis and anti-periodontitis agent, and also effective to destroy malodorous sulfur compounds. Preferred concentrations are in the range of 0.005% to 2% and the chlorine dioxide may be in the form of a wash or rinse in solution, a soak or as a toothpaste.

### 2. HIV

*Patent US6200557B Granted 2001 03/13*

**ABSTRACT:** A solution or gel composition containing activated stabilized chlorine dioxide and phosphates, such as disodium hydrogen phosphate, sodium dihydrogen phosphate, trisodium phosphate, and sodium monofluorophosphate, is disclosed for destroying HIV. The preferred concentration ranges are between about 0.005%-2.0% chlorine dioxide, and between about 0.02%-3.0% phosphate. The phosphate compound retards escape of chlorine dioxide in the pH range of 6.0 to 7.4, at which pH stabilized chlorine dioxide becomes activated and releases sufficient chlorine dioxide to reduce motility and become lethal to the involved micro-organisms. Using a lubricant as a vehicle for the chlorine dioxide/phosphate composition; development of vaginal itching due to *Candida Albicans* will be stopped.

### 3. HERPES LESIONS, FUNGAL INFECTION, PSORIASIS

*Patent US4956184A Granted 1990*

**ABSTRACT:** This invention relates generally to topical formulations (with chlorine dioxide) that are useful for treating various dermatologic disorders, including genital herpes lesions, facial and body acne, topical fungal infections, psoriasis, eczema, dandruff, skin ulcers (e.g., decubitus),

and other dermatologic diseases associated with microbial proliferation. This invention also relates to the anti-inflammatory properties and uses of pharmaceutical compositions.

#### **4. CELLULAR BLOOD DISINFECTANT**

*Patent US5281392A Granted 1994 01/25*

**ABSTRACT:** Applicant's former applications disclose the utility of normal saline and other isotonic solutions of chlorine dioxide for sterilizing certain blood products and tissue products. Quite unexpectedly, chlorine dioxide, a disinfectant strong enough to inactivate blood born viruses and microorganisms, can be utilized to disinfect cellular blood products without destroying the vitality and integrity of the cells.

#### **5. ANTI-PLAQUE AGENT**

*Patent US4696811A Granted 1987*

**ABSTRACT:** The use of stabilized chlorine dioxide as a composition for the treatment and prevention of oral disease and the reduction of oral malodor is disclosed. Chlorine dioxide is an effective anti-plaque agent, anti-gingivitis and anti-periodontitis agent, and also effective to destroy malodorous sulfur compounds. Preferred concentrations are in the range of 0.005% to 2% and the chlorine dioxide may be in the form of a wash or rinse in solution, a soak or as a toothpaste.

#### **6. PSORIASIS, FUNGAL INFECTIONS, ECZEMA, DANDRUFF, ACNE, GENITAL HERPES, LESIONS, AND LEG INFECTIONS**

*US Patent US5384134 Date of Patent: Jan. 24, 1995*

**ABSTRACT:** There is disclosed a method for treating dermatologic diseases caused by microbial overgrowth or inflammation, such as psoriasis, fungal infections, eczema, dandruff, acne, genital herpes, lesions, and leg ulcers. There is further disclosed and antiviral lubricating composition that is effective in preventing the transmission of the HIV virus and other sexually transmitted diseases. There is also disclosed systemic anti-inflammatory compositions and formulations and a method for reducing tissue inflammation in tissues such as the bowel, muscle, bone, tendon and joints (e.g., arthritis).

*(The following patent has the same number as the patent above, but with an additional "A" added to the number. The abstract reads the same, but if you look up the full text of the patent, you will see there is a difference in the patent.)*

## 7. PSORIASIS, ECZEMA, DANDRUFF, ACNE, LESIONS

*Patent US5384134A Granted 1988*

**PARTIAL ABSTRACT:** There is disclosed a method for treating dermatologic diseases caused by microbial overgrowth or inflammation, such as psoriasis, fungal infections, eczema, dandruff, acne, genital herpes lesions, and leg ulcers. There is further disclosed an antiviral lubricating composition that is effective in preventing the transmission of the HIV virus and other sexually transmitted diseases. There is also disclosed systemic anti-inflammatory compositions and formulations and a method of reducing tissue inflammation in tissues such as bowel, muscles, bone, tendon and joints (e.g., arthritis).

## 8. INFLUENZA VIRUS

*Patent EP 1955719 B1 Publication date Aug 6, 2014*

**CLAIMS:** (1) Chlorine dioxide gas for use in the treatment of a disease caused by the infection of a respiratory virus. (2) The chlorine dioxide gas for use according to claim 1, wherein the respiratory virus is influenza virus. (3) The chlorine dioxide gas for use according to claim 1 or claim 2, wherein the concentration of chlorine dioxide ranges from 0.0001 ppm to 0.1 ppm.

## 9. HIV INFECTIONS

*US Patent US6086922 Publication Date Jul 11, 2000*

**ABSTRACT:** The present invention is concerned with the use of a chemically stabilized chlorite matrix for the parenteral treatment of HIV infections. The chlorite matrix is an isotonic solution containing 5 to 100 mMol  $\text{ClO}_2$  per liter of solution.

## 10. EFFECTIVE OPHTHALMIC ANTISEPTICS

*US Patent US5736165 Publication Date Apr 7 1998*

**ABSTRACT:** Disclosed are in-the-eye uses of chlorine dioxide-containing compositions as effective ophthalmic antiseptics and as effective ophthalmic surgical irrigants. Surprisingly low concentrations of chlorine dioxide are effective in such applications. In addition, the presently useful compositions are ophthalmically acceptable.

## 11. HUMAN AMEBIASIS

*US Patent US4296102A Priority date: June 12, 1980*

**ABSTRACT:** A method for combating amebiasis in humans comprising orally administering to said humans an effective amount of a perborate-stabilized aqueous solution of chlorine oxides, said solution containing about 4-12% by weight of solution or potassium perborate and a peroxide of percarbonate.

## 12. PSORIASIS, ECZEMA, ACNE, GENITAL HERPES

*US Patent US4956184 Date of Patent: Sep. 11, 1990*

**ABSTRACT:** There is disclosed a method for treating dermatologic diseases caused by microbial overgrowth of inflammation, such as psoriasis, fungal infections, eczema, dandruff, acne, genital herpes, and leg ulcers. There is further disclosed an antiviral lubricating composition that is effective in preventing the transmission of the HIV virus and other sexually transmitted diseases. There is also disclosed systemic anti-inflammatory compositions and formulations and a method for reducing inflammation in tissues such as the bowel, muscle, bone, tendon and joints (e.g. arthritis).

## 13. PURIFYING RED BLOOD AND CORNEAS

*US Patent US4971760 Date of Patent: Nov. 20, 1990*

**ABSTRACT:** It is well known that the transfusion of human blood and blood constituents, or the transplantation of corneas and sclerae, carries a substantial risk of transmission of AIDS and many other diseases. This disclosure describes a method of disinfecting certain blood constituents—particularly the red cells, platelets and proteins — or disinfecting corneal and scleral tissues, to make them safer for human transfusion or transplantation, while respectively maintaining their biologic or optical function. A sterilizing solution is prepared from, e.g., a commercially available disinfectant (such as LD of Alcide Corporation) containing primarily lactic acid and sodium chlorite. Normal saline solution is used as diluents instead of distilled water. The blood constituent or cornea or sclera is exposed to the disinfectant for a time sufficient to inactivate or reduce the infectivity of disease agents. The normal-saline environment prevents or deters hemolysis of the red blood cells or damage to the corneal or scleral epithelium or endothelium, disruption of the platelets, or denaturation of the proteins. The blood cells or platelets (or both), or the cornea or sclera (or both) are then washed with normal saline solution until the disinfectant concentration is insignificant. Plasma proteins are precipitated out as with ammonium sulfate, resuspended and dialyzed to remove residual disinfectant and coagulant, and reconstituted. The blood constituents or eye parts are then safe for human transfusion or transplantation.

## 14. ORAL MALODOR OVERCOME

*US Patent US4851213 Date of Patent Jul. 25, 1989*

**ABSTRACT:** The use of stabilized chlorine dioxide as a composition for the treatment and prevention of oral disease and the reduction of oral malodor is disclosed. Chlorine dioxide is an effective anti-plaque agent, anti-gingivitis and anti-periodontitis agent, and also effective to destroy

malodorous sulfur compounds. Preferred concentrations are in the range of 0.005% to 2% and the chlorine dioxide may be in the form of a wash or rinse in solution, a soak or as a toothpaste.

### 15. PLAQUE DEPENDENT DISEASES

*US Patent US4818519 Date of Patent: Apr. 4, 1989*

**ABSTRACT:** The use of stabilized chlorine dioxide or chlorine dioxide in aqueous solution as a composition to reduce or prevent plaque formation and treatment of oral diseases ecologically plaque dependent, such as gingivitis and periodontitis, is disclosed. Preferred concentrations are in the range of 0.005% to 0.2% and the chlorine dioxide may be in the form of a rinse, a wash, a soak or a dentifrice.

### 16. PSORIASIS, ECZEMA, ACNE, GENITAL HERPES, HIV TRANSMISSION

*US Patent US RE37,263 E Date of Patent: Jul. 3, 2001*

**ABSTRACT:** There is disclosed a method for treating dermatologic diseases caused by microbial overgrowth of inflammation, such as psoriasis, fungal infections, eczema, dandruff, acne, genital herpes lesions, and leg ulcers. There is further disclosed an antiviral lubricating composition that is effective in preventing the transmission of the HIV virus and other sexually transmitted diseases. There is also disclosed systemic and anti-inflammatory compositions and formulations and a method for reducing tissue inflammation in tissues such as the bowel, muscle, bone, tendon and joint (e.g., arthritis).

### 17. GINGIVITIS AND PERIODONTITIS

*US Patent US4837009 Date of Patent Jun. 6, 1989*

**ABSTRACT:** The use of stabilized chlorine dioxide or chlorine dioxide in aqueous solution as a composition to reduce or prevent plaque formation and treatment of oral diseases ecologically plaque dependent, such a gingivitis and periodontitis, is disclosed. Preferred concentrations are in the range of 0.005% to 2.0% and the chlorine dioxide may be in the form of a rinse, a wash, as soak or a dentifrice.

### 18. HERPES, DANDRUFF, ACNE, ULCERS, FUNGUS, ETC.

*US Patent US6231830 B1 Date of Patent: May 15, 2001*

**ABSTRACT:** A method for manufacturing molecular chlorine dioxide, by the addition of potassium iodide to a solution of alkali metal chlorite. The metal chlorite and the potassium iodide are kept separate, until the need for the generation of chlorine dioxide arises — to ensure long-shelf

life. After initiation or activation of the chlorite anion to form chlorine dioxide, the beneficial properties of chlorine dioxide can be used, for different health and cosmetic purposes. Such uses include the treatment of herpes, dandruff, acne, skin rashes (e.g. poison ivy), ulcers, bed sores, warts, nail fungus, athlete's foot, sunburn and gum diseases; and as an antiseptic disinfectant, and general deodorant from refrigerator sprays to oral mouth rinses.

## 19. NON-HEALING WOUNDS

*US Patent US5855922 Date of Patent: Jan. 5, 1999*

**ABSTRACT:** Compositions and processes for the prophylaxis and therapeutic treatment of wounds, chronic non-healing wounds, burns, disease and other dermal disorders are disclosed. The compositions of the present invention comprise aqueous solutions of metal chlorite having a concentration of from about 0.002% to about 0.5% by weight of metal chlorite. The process of the present invention comprises treating the dermal disorder with an aqueous solution of from about 0.002% to about 0.5% by weight of the metal chlorite. Wounds, chronic non-healing wounds, burns, and other dermal disorders treated in this manner heal more quickly and with reduced scar formation. The antiseptic compositions and processes of the present invention exhibit anti-collagenous activity such that the characteristics of the healed skin, such as elasticity and tensile strength, are similar to undamaged skin.

## 20. GINGIVITIS AND PERIODONTITIS

*US Patent US4889714 Date of Patent: Dec. 26, 1989*

**ABSTRACT:** The use of stabilized chlorine dioxide or chlorine dioxide in aqueous solution as a composition to reduce or prevent plaque formation and treatment of oral disease ecologically plaque dependent, such as gingivitis and periodontitis, is disclosed. Preferred concentrations are in the range of 0.005% to 0.2% and the chlorine dioxide may be in the form of a rinse, a wash, a soak or a dentifrice.

## 21. KILLING HERPES VIRUS

*US Patent US6287551 B1 Date of Patent: Sep. 11, 2001*

**ABSTRACT:** A solution or gel composition containing activated chlorine dioxide and phosphates, such as disodium hydrogen phosphate, trisodium phosphate, and sodium monofluorophosphate, is disclosed for treating herpes virus. The referred concentration ranges are between about 0.005% to about 2.0% chlorine dioxide, and between about 0.02% to about 3.0% of a phosphate compound. The phosphate compound retards escape

of chlorine dioxide in the pH range of 6.0 to 7.4, at which pH chlorine dioxide becomes activated and releases sufficient chlorine dioxide to reduce motility and become lethal to the involved micro-organisms.

## **22. ALLEVIATING CHLORINE DIOXIDE IRRITATION OF SKIN**

*US Patent US5616347 Date of Patent: Apr. 1, 1997*

**ABSTRACT:** US The present invention relates to the discovery that the inclusion of effective amounts of an irritation reducing compound selected from the group consisting of allantoin, glycerine, aloe vera and mixtures, thereof, in a chlorine dioxide generating composition will substantially reduce skin irritation which is caused by chlorine dioxide exposure to the skin. (Note: This patent explains that if using chlorine dioxide for treating acne, herpes, fungal infections, general skin infections or as a general skin cleanser, if needed, the solutions mentioned above, (aloe vera, etc.) can be used to prevent skin irritation, should it occur, for those with sensitive skin. Information on how to use chlorine dioxide for sensitive skin is included in the *MMS Health Recovery Guidebook*.)

## **23. TREATMENT OF EYES**

*US Patent US6592907 B2 Date of Patent: Jul.15, 2003*

**ABSTRACT:** An anti-microbial liquid ophthalmic composition for the direct application into an eye of a living being. The composition includes from about 0.02 wt.% to about 0.20 wt.% chlorite compound and from about 0.005 wt.% to about 0.01 wt.% peroxy compound, at a pH between about 7.0 and 7.8. Preferably, the chlorite compound is a metal chlorite where the metal is chosen from the group consisting of sodium, potassium, calcium, and magnesium, while the peroxy compound is hydrogen peroxide. Also included are methods for treating an eye infection through application of the composition to the eye, and for cleansing a contact lens in place on an eye through application of the composition to the lens.

## **24. TREATMENT OF DISEASED HONEY BEES**

*US Patent US6096350 Date of Patent: Aug. 1, 2000*

**ABSTRACT:** Honey Compositions and methods for disinfecting bee colonies for preventing or treating diseases in honey bees, honey bee larvae and honey bee hives are disclosed. Such diseases may arise from a variety of sources, including bacteria, fungi, viruses, protozoa and parasites in the hive. Representative diseases preventable or treatable by this invention include Foulbrood and Chalkbrood. The compositions of the present invention include a protic acid and a chlorite ion, and may further include other optional components such as a gelling agent, colorant and/or

preservative. Methods disclosed herein include applying the composition to a surface of a bee-hive. Honey produced by bees administered a composition of this invention is also disclosed.

## 25. TREATMENT BACTERIAL INFECTIONS OF THE UDDER

*Patent US5252343 Date of Patent: Oct. 12, 1993*

**ABSTRACT:** There is disclosed methods and compositions for preventing and treating bacterial infections, including mastitis, in the udder of a mammal. The composition include chlorine dioxide in an amount ranging from 5 ppm to 1000 ppm, and have a chlorine dioxide to chlorite ratio of at least 5:1. Methods of the present invention include the infusion of the composition into the mammal's udder, and the formation of the compositions immediately prior to infusion.

## 26. TREATMENT OF WOUNDS

*US Patent US5622725 Date of Patent: Apr.22, 1997*

**ABSTRACT:** Methods for preventing and treating microbial wound infections, especially of peritoneal cavity wounds including those having indwelling catheters, and enhancing wound repair while minimizing adhesions and scar formation involve the infusion of irrigation of the wound with a solution containing a pharmacologically acceptable carrier and chlorine dioxide in an amount ranging from about 5 ppm to 1000 ppm, and having a chlorine dioxide to chlorite ration of at least 5:1. Typical solutions contain chlorine dioxide in isotonic saline and exhibit a pH of from about 5 to about 7.5. Sodium chlorite is employed in preferred embodiments.

## 27. MYCOBACTERIUM CHELONAE

*US Patent US7449119 B2 Date of Patent: Nov. 11, 2008*

**ABSTRACT:** Combinations Containing chlorine and/or bromine in combination with chlorine dioxide are found to be synergistic against non-tuberculosis mycobacterium such as *mycobacterium chelonae*.

## 28. CHLAMYDIA INFECTION

*US Patent US6277363 B1 Date of Patent: Aug. 21, 2001*

**ABSTRACT:** A solution or gel composition containing activated chlorine dioxide and a phosphate compound, such as disodium hydrogen phosphate, sodium dihydrogen phosphate, trisodium phosphate, and sodium monofluorophosphate, is disclosed for treating a Chlamydia infection. The preferred concentration ranges are between about 0.005% to about 2.0% chlorine dioxide, and between about 0.02% to about 3.0% phosphate compound. The phosphate compound retards escape of chlorine dioxide

in the pH range of 6.0 to 7.4, at which pH the chlorine dioxide becomes activated and releases sufficient chlorine dioxide to reduce motility and become lethal to the involved micro-organisms.

### **29. PURIFYING BLOOD**

*US Patent US5019402 Date of Patent: May 28, 1991*

**ABSTRACT:** There is disclosed a composition and process for disinfecting or essentially sterilizing blood fractions and compositions of blood. The composition is formed by adding a chlorine dioxide liberating compound with a weak organic acid and a heat activated saccharide.

### **30. FEMALE VAGINAL INFECTIONS**

*US Patent US5667817 Date of Patent: Sep. 16, 1997*

**ABSTRACT:** Methods for preventing and treating microbial infections in the mammalian female lower genital tract such as vulvitis, vaginitis, cervicitis, and endometritis involve the intra-vaginal and/or intra-uterine infusion of a solution containing a pharmacologically acceptable carrier and chlorine dioxide in an amount ranging from about 5 ppm to 1000 ppm, and having a chlorine dioxide to chlorite ratio of at least 5:1. Typical solutions exhibit a pH compatible with the lower genital tract, e.g. a pH from about 5 to 7.5. In many embodiments, chlorine dioxide in the solution is produced by reacting a chlorite with a mineral acid and adjusting the pH by reacting a chlorite with an organic acid having a pK of about 2.8 to 4.2. Sodium chlorite is employed in preferred embodiments.

### **31. CONTACT LENS DISINFECTION**

*US Patent US5648074 Date of Patent: Jul. 15, 1997*

**ABSTRACT:** Composition and methods for disinfecting contact lenses are disclosed. In one embodiment, the present compositions include a liquid medium containing chlorine dioxide precursor in an amount effective to form, when activated, a chlorine dioxide-containing composition including a contact lens disinfecting amount of chlorine dioxide. A polyanionic component, preferably a water soluble polyanionic component, is included in the composition in an amount effective to inhibit the formation of proteinaceous deposit material on a contact lens immersed in the chlorine dioxide-containing composition. Thus, effective contact lens disinfection is achieved while at the same time, reducing the risk of forming proteinaceous deposit material on the contact lens during the disinfecting processing.

### 32. TREATING MICROBIAL PERITONEAL CAVITY WOUNDS

*US Patent US5,622,725 Date of Patent: Apr. 22, 1997*

**ABSTRACT:** Methods for preventing and treating microbial wound infections, especially of peritoneal cavity wounds including those having indwelling catheters, and enhancing wound repair while minimizing adhesions and scar formation involve the infusion or irrigation of the wound with a solution containing a pharmacologically acceptable carrier and chlorine dioxide in an amount ranging from about 5 ppm to 1000 ppm, and having a chlorine dioxide to chlorite ratio of at least 5:1. Typical solutions contain chlorine dioxide in isotonic saline and exhibit a pH of from about 5 to about 7.5. Sodium chlorite is employed in preferred embodiments.

### 33. FUNGAL INFECTIONS SUCH AS CANDIDA AND LUKOPLAKIA

*US Patent US5,618,550 Date of Patent: Apr. 8, 1997*

**ABSTRACT:** A stable solution, cream, salve, or spray composition containing activated stabilized chlorine dioxide and phosphates, such as disodium hydrogen phosphate, sodium dihydrogen phosphate, trisodium phosphate, and sodium monofluorophosphate, is disclosed for the prevention and treatment of abnormal conditions of the epithelium of bodily orifices. Examples of such abnormal conditions of the epithelium of the rectal, vaginal, urethral, oral, nasal, ocular, and auditory canal orifices include bacterial infections, such as *Actinobacillus actinomycetemcomitans* and *Porphyromonas gingivalis*, and fungal infections, such as *Candida*, and leukoplakia. The preferred concentration ranges are between about 0.005%--2.0% chlorine dioxide, and between about 0.02%--3% phosphate. The phosphate compound retards escape of chlorine dioxide in the pH range of 6.0 to 7.4 at which pH stabilized chlorine dioxide becomes activated and releases sufficient chlorine dioxide to reduce motility and become lethal to the involved micro-organisms.

### 34. ORAL DISEASES, PLAQUE FORMATION

*European Patent EP0461105B1 First Filing 1986-03-31*

**ABSTRACT:** The use of stabilized chlorine dioxide or chlorine dioxide in aqueous solution as a composition to deduce or prevent plaque formation such as gingivitis and periodontitis, (*see patent office for the rest of this patent*).

### 35. WOUND REPAIR

*Canadian patent CA2184813C first filing 1994-03-04*

**ABSTRACT:** Methods for preventing and treating microbial wound infections, especially of peritoneal cavity wounds including those having

indwelling catheters, and enhancing wound repair while minimizing adhesion and scar formation involve the ... (see patent office for rest of abstract).

### **36. UDDER MASTITIS, BACTERIAL INFECTIONS**

*Canadian patent CA2131888C first filing 1999-08-26*

**ABSTRACT:** There is disclosed methods and compositions for preventing and treating bacterial infections, including mastitis, in the udder of a mammal. The compositions include chlorine dioxide in an amount ranging from 5 ppm to 1000 ppm, and have a ... (see patent office for rest of abstract).

### **37. ANTI-ACNE**

*Canadian patent CA2483448C first filing 2002-04-25*

**ABSTRACT:** The present invention relates to a composition for the treatment of acne comprising chlorine dioxide or chlorine dioxide generating compounds as acne reduction agents. The invention also relates to a method for treating acne by topically ... (see patent office for rest of abstract).

### **38. LUNG DISEASES**

*US Patent ES2518368T3 publication 2014-11-05*

**ABSTRACT:** Gas chlorine dioxide for use in the treatment of a disease caused by infection with a respiratory virus.

### **39. HERPES**

*US Patent US6,287,551B1 first filing 1993-07-06*

**ABSTRACT:** A solution or gel composition containing activated chlorine dioxide and phosphates, such as disodium hydrogen phosphate, sodium dihydrogen phosphate, trisodium phosphate, and sodium monofluorophosphate, is disclosed for treating herpes ... (see patent office for rest of abstract).

### **40. FINGER NAIL FUNGUS**

*US Patent US9,320,921 Granted 2016-04-26*

**ABSTRACT:** Compositions and methods for treating or preventing fungal infections of the nail are provided. The topical composition includes the use of chlorine dioxide, chlorite salts, benzoyl peroxide, an alpha hydroxy acid, antifungal and ... (see patent office for rest of abstract).

## CHAPTER 10

# ARTICLES

### Articles Favorable to Chlorine Dioxide

The following articles have all been published by government agencies or various well known private corporations. All explain the value of chlorine dioxide, but none will acknowledge that chlorine dioxide can overcome disease. But they do prove that (MMS) is not poisonous. There are however a few articles listed below that the links have been removed from the internet, but I have nevertheless left them in for your reference. Some government people from around the world are against MMS. The fact that many thousands of people have been healed in more than 150 countries and are living happy lives is probably beginning to be a problem (as they see it). It may be that “someone” is beginning to miss the millions of dollars lost when people can recover their health from cancer and any one of a hundred other diseases for as little as \$50 US dollars.

### ARTICLE 1

#### **EPA SAYS DRINKING CHLORINE DIOXIDE IS SAFE FOR HUMANS**

This website takes you to a study which was conducted under the auspices [patronage, support, sponsorship] of the US Environmental Protection agency (USEPA) Health Effects Research Laboratory (HERL).

*<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1569027/pdf/envhper00463-0059.pdf>*

**SUMMARY OF THE STUDY:** Clinical evaluation was conducted in three phases common to investigational drug studies. Phase I, a rising dose tolerance investigation, examined the acute effects of progressively increasing single doses of chlorine dioxide disinfectants to normal healthy adult male volunteers. The three phases of this controlled double-blind clinical evaluation of chlorine dioxide and its potential metabolites in human male volunteer subjects were **completed uneventfully. There were no obvious undesirable clinical sequellae (consequences)** noted by any of the participating subjects or by the observing medical team. In several

cases, statistically significant trends in certain biochemical or physiological parameters were associated with treatment; however, **none of these trends was judged to have physiological consequences.**

**Conclusion:**... by the **absence of the detrimental physiological responses** within the limits of the study, **the relative safety of the oral ingestion of chlorine dioxide** and its metabolites chlorite and chlorate, **was demonstrated.**

To give you an idea of the importance of this study let me point out the following. As stated above this study was conducted under the auspices of USEPA HERL. A description of HERL is here:

***[https://cfpub.epa.gov/si/si\\_public\\_record\\_Report.cfm?Lab=NHEERL&dirEntryID=41650](https://cfpub.epa.gov/si/si_public_record_Report.cfm?Lab=NHEERL&dirEntryID=41650)***

**The study was published by the NIH**, according to page one of the PDF: Environmental Health Perspectives Vol. 46, pp. 57-62, 1982

So what is “Environmental Health Perspectives”? According to Wikipedia: Environmental Health Perspectives (EHP) is a peer-reviewed open access journal published monthly with support from the U.S. National Institute of Environmental Health Sciences (NIEHS). The primary purposes of EHP are to communicate recent scientific findings and trends in the environmental health sciences; to improve the environmental health knowledge base among researchers, administrators, and policy makers; and to inform the public about important topics in environmental health. As of 2015 EHP has an impact factor of 8.44.

It is indexed in PubMed.

***[https://en.wikipedia.org/wiki/Environmental\\_Health\\_Perspectives](https://en.wikipedia.org/wiki/Environmental_Health_Perspectives)***

So, what’s “the U.S. National Institute of Environmental Health Sciences”? According to Wikipedia: The National Institute of Environmental Health Sciences (NIEHS) conducts research into the effects of the environment on human disease, as one of the 27 institutes and centers of the National Institutes of Health (NIH).

***[https://en.wikipedia.org/wiki/National\\_Institute\\_of\\_Environmental\\_Health\\_Sciences](https://en.wikipedia.org/wiki/National_Institute_of_Environmental_Health_Sciences)***

So, this study was **published** by the **NIH**, and **conducted** by the **EPA**. Here we have **two major** US government agencies involved in promoting this study. Finally, in addition to being published by the NIH’s Environmental

---

Health Perspectives journal, it was indexed and permanently archived by the NIH's PubMed (*see first Wikipedia link above*). PubMed (PMC) is run by the NIH: PMC is a free full-text archive of biomedical and life sciences journal literature at the U.S. National Institutes of Health's National Library of Medicine (NIH/NLM). <https://www.ncbi.nlm.nih.gov/pmc/>

## ARTICLE 2

### HISTORY OF CHLORINE DIOXIDE

<http://www.performacide.com/?gclid=COuQ8IW10cYCFQ-maQodlC0Jrg>

This is a company called Performacide, which uses chlorine dioxide in the following forms: Spray Disinfectant, Sanitizer and Virucide. Their website has good information regarding chlorine dioxide (MMS). They give a very good timeline of the history of chlorine dioxide under the "About ClO<sub>2</sub>" tab go here for the timeline: <http://www.performacide.com/the-history>

Two interesting facts brought out in the timeline information are:

1) Chlorine dioxide is one of the decontamination agents which was used by the United States government against the Anthrax attacks of 2001. The Anthrax attacks are a ghastly example of bioterrorism. The spores of a bacterium *Bacillus anthracis* are used, which can cause the life-threatening disease 'anthrax' in victims. The choice of chlorine dioxide is due to its established sporicidal and sterilizing properties.

2) The EPA lists PERFORMACIDE® as a registered disinfectant that meets the Center for Disease Control's (CDC) criteria for use against the Ebola virus. PERFORMACIDE® is a unique chlorine dioxide generator and delivery system. Chlorine dioxide is a potent virucide.

## ARTICLE 3

### CHLORINE DIOXIDE AS A MOUTH WASH

<https://www.ncbi.nlm.nih.gov/pubmed/11199703>

Efficacy of a chlorine dioxide containing mouth rinse in oral malodor by TKL Research, Inc., Paramus, New Jersey, USA. Frascella I. Gilbert

RD, Fernandez P. Hendler I. Abstract: Studies have suggested that when chlorine dioxide is contained in a mouth rinse, it neutralizes volatile sulfur compounds in mouth air. The efficacy of a chlorine dioxide-containing mouth rinse in the reduction of oral malodor was evaluated in a randomized, controlled, double-blind, parallel group study of 31 men and women. Subjects with a maximum odor pleasantness score of  $<$  or  $=$  -1 (slightly unpleasant/stale) on a 7-point ordinal scale at both screening and baseline were randomized to treatment with the chlorine dioxide containing rinse (n = 16) or distilled water (negative control) (n = 15). Oral malodor was evaluated at baseline (pre-rinse) and at 2, 4, 8, 24, 48, 72, and 96 hours post rinse by both a trained, previously calibrated panel of organoleptic judges and a factory-calibrated portable sulfide monitor. This is only a small part of the abstract and the entire report. Please follow the link given above for full details and the research. The main point here is that chlorine dioxide makes a very superior mouth wash.

#### ARTICLE 4

##### **TOXICOLOGICAL REVIEW CHLORINE DIOXIDE/CHLORITE**

*[https://cfpub.epa.gov/ncea/iris/iris\\_documents/documents/toxreviews/0496tr.pdf](https://cfpub.epa.gov/ncea/iris/iris_documents/documents/toxreviews/0496tr.pdf)*

This is a link to the EPA/iris/iris\_documents/documents/buy various companies concerning the use and toxicological of chlorine dioxide and sodium chlorite. It consists mostly of studies with rats but there was also data concerning humans. The study is highly technical and may or may not interest most laymen.

#### ARTICLE 5

##### **FURTHER CHLORINE DIOXIDE INFORMATION CONCERNING FOOD PROCESSING**

*[www.fda.gov/downloads/food/ingredientspackaginglabeling/environmentaldecisions/ucm232745.pdf](http://www.fda.gov/downloads/food/ingredientspackaginglabeling/environmentaldecisions/ucm232745.pdf)*

CFR — Code of Federal Regulations Title 21. The information on this page is current as of April 1 2017. For the most up-to-date version of CFR Title 21, go to the above link. Of course the title 21 CFR cover thousands of pages but you can find much more about chlorine dioxide by following this

link and many others in this book and researching on the web. This is only an excerpt from the FDA CFR 21. If you search this link you will find that the FDA says that chlorine dioxide is less toxic than chlorine. It is approved for disinfection of poultry, and fruits and vegetables, and bio-accumulation does not occur. Unfortunately all this data given in the above FDA address has been removed from the internet and no reason given.

## **ARTICLE 6**

### **CHLORINE DIOXIDE CONTACT WITH FOOD — USING ACIDIFIED SODIUM CHLORITE SOLUTIONS**

***[www.fda.gov/downloads/Food/FoodIngredientsPackaging/  
EnvironmentalDecisions/UCM143448.PDF](http://www.fda.gov/downloads/Food/FoodIngredientsPackaging/EnvironmentalDecisions/UCM143448.PDF)***

This is the FDA government link. Revised environmental assessment for chlorine dioxide food-contact notification (FQN). Generated chlorine dioxide is allowed to be used in processing of red meat, red meat parts and organs, as well as sea food. The same has happened with this article, it has been removed from the internet and no reason is given.

## **ARTICLE 7**

### **CHLORINE DIOXIDE AND SODIUM CHLORITE FACT SHEET**

***[www.atsdr.cdc.gov/toxprofiles/tp.asp?id=582&tid=108](http://www.atsdr.cdc.gov/toxprofiles/tp.asp?id=582&tid=108)***

Put this link into your computer to read the full article of the abstract given below. Both chlorine dioxide and sodium chlorite have been proven safe, and this article plus hundreds of articles proves that they are not dangerous when used properly. All substances are dangerous when used improperly.

## **ARTICLE 8**

### **SAFETY OF ACIDIFIED SODIUM CHLORITE SOLUTIONS**

***[www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcr/cfrsearch.cfm?fr=173.325](http://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcr/cfrsearch.cfm?fr=173.325)***

Sec. 173.325 Acidified sodium chlorite solutions. Acidified sodium chlorite solutions may be safely used in accordance with the following prescribed conditions: (a) The additive is produced by mixing an aqueous solution of

sodium chlorite (CAS Reg. No. 7758-19-2) with any generally recognized as safe (GRAS) acid. (b) The additive is used as an antimicrobial agent in poultry processing water in accordance with current industry practice under the following conditions: For further information concerning this FDA government script please go to the link given above.

## ARTICLE 9

### **A BOOK ON THE SAFETY OF CHLORINE DIOXIDE**

***<https://www.atsdr.cdc.gov/toxprofiles/tp160.pdf>***

This book is a complete treatise on how supposedly poisonous chlorine dioxide really is not poisonous or actually how safe chlorine dioxide is. The US Government book, *Toxicological Profile For Chlorine Dioxide And Chlorite*, is given at the above Link. This book is too large to be presented here but basically it tells in scientific and lay terms how chlorine dioxide is used for many things in the food industry and that there is very little danger from chlorine dioxide. It also mentions that there has been only one death from chlorine dioxide over the past century and that was the death I have already mentioned concerning the one man who was caught in an environment with chlorine dioxide gas. This book was put up for use in 2004. It continues the evidence of the usefulness of chlorine dioxide and sodium chlorite. It is listed here because it does help with the knowledge of these chemicals. In the event that the government would take this book down for any reason I have saved the entire book in my own reference library.

## ARTICLE 10

### **MANY ASPECTS OF CHLORINE DIOXIDE**

**BY LENNTECH (INDUSTRIAL) CORPORATION**

***[www.lenntech.com/library/clo2/chlorine-dioxide.htm](http://www.lenntech.com/library/clo2/chlorine-dioxide.htm)***

Lenntech Corporation has been selling chlorine dioxide for more than 50 years for hundreds of industrial uses including public water purification. They point out that chlorine dioxide is selective in what microorganisms it kills, and thus kills only the harmful pathogens. However, there are many dozens of important aspects to learn about. The above link will take you to the chlorine dioxide library of the Lenntech Corporation. Many companies and Colleges in the world use the Lenntech chlorine dioxide library for

their chlorine dioxide references. Also see the following in the Lenntech library explaining some of the mechanisms of chlorine dioxide: Chlorine Dioxide Chemistry: “chlorine dioxide functions as a highly selective oxidant due to its unique, one-electron transfer mechanism where it is reduced to chlorite ( $\text{ClO}_2^-$ ) (Hoehn et al., 1996).” 4.4 – Chlorine dioxide is a strong oxidant and disinfectant. Its disinfecting mechanisms are not well understood, but appear to vary by the type of microorganism. 4.4.1 – In the first disinfection mechanism, chlorine dioxide reacts readily with amino acids cysteine, tryptophan, and tyrosine, but not with viral ribonucleic acid (RNA) (Noss et al., 1983; Olivier et al., 1985) It was concluded that chlorine dioxide inactivated viruses by altering the viral capsid proteins.

Just let me remind you that although there have arrived on the scene a few new books on using chlorine dioxide (MMS) for overcoming diseases the only book available that is based on 22 years of actually using MMS to overcome diseases is the *MMS Health Recovery Guidebook* (by the author of this book).

## ARTICLE 11

**CHLORINE DIOXIDE EFFECTIVE IN CLEANING WATER OF PATHOGENS**  
***[www.msu.edu/~brook/publications/aeis/aeis654.htm](http://www.msu.edu/~brook/publications/aeis/aeis654.htm)***

How effective is chlorine dioxide in cleaning water of many pathogens, and mold and yeast spores. Some benefits of chlorine dioxide disinfection include longer shelf-life of produce, minimal equipment corrosion, significantly less water use, reduced chemical costs, and reduced packinghouse sanitation costs. For complete details please follow the above link.

## ARTICLE 12

**RESEARCH AT PURDUE UNIVERSITY**  
***[www.cfse.purdue.edu/media/annualreport/chlorinedioxidegas\\_han.pdf](http://www.cfse.purdue.edu/media/annualreport/chlorinedioxidegas_han.pdf)***

Purdue University web site gives many pieces of data on the basics of chlorine dioxide. Research on chlorine dioxide gas technology at Purdue University has been extensive and if you go to the website at this link you will find many basic facts. The university has the actual research reports

in their library and you will have to visit their library to get all of the data, however the website does give many accurate chlorine dioxide facts.

### ARTICLE 13

#### EUROPEAN FOOD SAFETY AUTHORITY REPORT

*[www.efsa.europa.eu/sites/default/files/scientific\\_output/files/main\\_documents/297.pdf](http://www.efsa.europa.eu/sites/default/files/scientific_output/files/main_documents/297.pdf)*

This is a report by the EFSA (European Food Safety Authority) Journal (2005) 297, 1-27 on the safety of chlorine dioxide and sodium chlorite and other disinfectants for use on food. This Scientific Panel (ESFA) appointed by the European Commission to express its opinion on the health risks of using acidified sodium chlorite and chlorine dioxide when decontaminating poultry found after testing that when the solutions are used as required for treatment they posed no safety concern.

### ARTICLE 14

#### CHLORINE DIOXIDE WATER SAFETY PRODUCTS

*[www.wqpmag.com/advanced-technology-brings-power-chlorine-dioxide](http://www.wqpmag.com/advanced-technology-brings-power-chlorine-dioxide)*

This is a company (Rosedale Products, Inc.) has found chlorine dioxide extremely useful and is using it to create new products for water safety. Chlorine dioxide has a wide use. It does not generate harmful by products when used. Read this company's interesting data on chlorine dioxide and sodium chlorite.

### ARTICLE 15

#### BETTER THAN BLEACH:

#### USE CALCIUM HYPOCHLORITE TO DISINFECT WATER

*<http://survivaltopics.com/better-than-bleach-use-calcium-hypochlorite-to-disinfect-water/>*

This article states: Knowing how to make your water safe to drink can not only keep you healthy – it could save your life.

## ARTICLE 16

### CHLORINE DIOXIDE FOR WATER PURIFICATION

*<http://www.environmental-expert.com/products/twinoxide-chlorine-dioxide-251664>*

This is a company that makes many industrial products for purifying water and many other things. Twin Oxide International B.V. confirms chlorine dioxide is the best water disinfectant. This company also sells many products that use chlorine dioxide. There are many such companies, however, I can only show you a few for your consideration concerning the usefulness of chlorine dioxide.

## ARTICLE 17

### CHLORINE DIOXIDE EFFECTIVE ORAL RINSE

*[www.perioimplantadvisory.com/articles/2015/01/an-effective-alternative-to-chlorhexidine.html](http://www.perioimplantadvisory.com/articles/2015/01/an-effective-alternative-to-chlorhexidine.html)*

This article tells about an extremely effective oral rinse using chlorine dioxide giving the research results. Chlorine dioxide outperformed chlorhexidine for getting rid of plaque in the mouth and it was also considered that the chlorine dioxide would be protecting the teeth against decay.

## ARTICLE 18

### CHLORINE DIOXIDE ENVIRONMENTAL FRIENDLY

*[www.aet.org/reports/communication\\_resources/fact\\_sheets/atom.html](http://www.aet.org/reports/communication_resources/fact_sheets/atom.html)*

This article tells a lot about the chemistry of chlorine dioxide in reference to chemicals now used which do much damage to the environment. Chlorine dioxide does no damage to environment. It explains how slight change in chemistry makes such a large change in how it reacts or does not react in the environment. Explanation of when chlorine dioxide replaces chlorine, the public need no longer worry about environmental issues with chlorine. There is also a very useful fact sheet on this site. Unfortunately this article has been removed from the internet and no reason is given.

## ARTICLE 19

### CHLORINE DIOXIDE AND THE ENVIRONMENT

[www.cdgenvironmental.com/](http://www.cdgenvironmental.com/)

More information and details on chlorine dioxide, and explanation why producing white paper using chlorine dioxide will not impact on the environment like chlorine does.

### **CHLORINE DIOXIDE GIVEN USDA 3-D APPROVAL**

*<https://msu.edu/~brook/publications/aeis/aeis654.htm>*

Chlorine dioxide has been given a USDA 3-D approval for washing fruits and vegetables to be used as ingredients of meat and poultry products. Chlorine dioxide is normally made at the point of use. This results in disinfected water and produce surfaces through a reduction of pathogen populations.

## ARTICLE 26

### **MANY USES OF CHLORINE DIOXIDE**

*<http://shareclean.net/index.html>*

This is a private company but again you may be interested in their hundreds of products. As you can see there are thousands of uses for chlorine dioxide throughout our society. The safety of chlorine dioxide cannot be denied as after 100 years there have never been any deaths or permanent injuries attributed to chlorine dioxide. Consider approximately one million unnecessary deaths caused by pharmaceuticals each year and the other thousands of deaths caused by other disinfectants such as chlorine water purifiers and others. No other chemical that is in use matches anything comparable to chlorine dioxide in reference to safety.

## ARTICLE 27

### **SAFETY OF CHLORINE DIOXIDE**

*<http://www.dioxidodecloro.wiki/Acutesodiumchloritepoisoning.pdf>*

Young Chinese man tried to use sodium chlorite to commit suicide. I just thought you might like to read from PubMed (a prestigious medical group) about what happened to a 25-year-old Chinese male who tried to commit suicide by ingesting 2600 times the normal maximum dose of sodium chlorite that is used in Protocol 1000. He was sick but he didn't die and was back to normal in three months.

## ARTICLE 28

### **GOOD DATA ON SODIUM CHLORITE**

*[https://pubchem.ncbi.nlm.nih.gov/compound/sodium\\_chlorite#section=Top](https://pubchem.ncbi.nlm.nih.gov/compound/sodium_chlorite#section=Top)*

This site has very complete data on sodium chlorite. Some data is incorrect. This web site is one of the most complete sites concerning sodium chlorite that I have been able to find. If you are really looking for the basics on sodium chlorite this is it. It also includes several patents issued in 2001, more than 64 different designations for sodium chlorite, food additives, drug and medication, safety and hazards, and a great deal of other data.

Keep in mind that not all their data is accurate as they indicate sodium chlorite is bad for fish, but many institutions use sodium chlorite to maintain the health of their fish tanks and special delicate aquatic life. The data given here is a good place to start learning about sodium chlorite, however in piecing together data concerning the ability of sodium chlorite to help overcome diseases please remember that all medical facilities are always on the look out to remove any data that they can concerning anything that could be used to treat the cause of diseases rather than the effect (the symptoms) of the diseases.

## **ARTICLE 29**

### **SAFE USE OF CHLORINE DIOXIDE**

*[www.gpo.gov/fdsys/pkg/CFR-2015-title21-vol3/pdf/CFR-2015-title21-vol3-sec173-300.pdf](http://www.gpo.gov/fdsys/pkg/CFR-2015-title21-vol3/pdf/CFR-2015-title21-vol3-sec173-300.pdf)*

Conditions under which chlorine dioxide can be safely used. There isn't a great deal of data in these CFR articles but they do show what the government is approving. In this case they give accepted ways of creating chlorine dioxide and they explain that foods that have been treated with it under certain conditions don't even need to be washed or even rinsed before using — just one more piece of data for you.

## **ARTICLE 30**

### **ANOTHER APPROVAL OF CHLORINE DIOXIDE FROM FEDERAL REGISTER**

*[www.gpo.gov/fdsys/pkg/FR-2005-02-14/pdf/05-2808.pdf](http://www.gpo.gov/fdsys/pkg/FR-2005-02-14/pdf/05-2808.pdf)*

This Federal Register / Vol. 70 No. 29 is concerned with making chlorine dioxide and using it. Mainly I have listed these pages to show you that the FDA is basically listing several ways that it approves of making chlorine dioxide and that it again mentions that chlorine dioxide can be used on vegetables without washing the chlorine dioxide off. When you go here, there are three pages from the Federal Register, go to the third page to read about chlorine dioxide. I am showing this point to again point out that if chlorine dioxide was in any way poison the FDA would not allow vegetables to be used without being washed off.

## ARTICLE 31

**MORE USES OF CHLORINE DIOXIDE FROM THE FEDERAL REGISTER**  
*[www.gpo.gov/fdsys/pkg/FR-1998-07-20/pdf/98-19314.pdf](http://www.gpo.gov/fdsys/pkg/FR-1998-07-20/pdf/98-19314.pdf)*

More on the use of chlorine dioxide as given in the Federal Register. This Federal Register article is given on the second page. I have put it here just to show one more time that the federal government is approving of using chlorine dioxide on food thus confirming that it is not poisonous.

## ARTICLE 32

**BOOK BY EPA ABOUT CHLORINE DIOXIDE**  
*[https://archive.epa.gov/pesticides/reregistration/web/pdf/chlorine\\_dioxide\\_red.pdf](https://archive.epa.gov/pesticides/reregistration/web/pdf/chlorine_dioxide_red.pdf)*

This is a 106 page book by the EPA about chlorine dioxide. It gives many details of the chemistry and other details of chlorine dioxide. The data definitely shows chlorine dioxide is not poisonous.

## ARTICLE 33

**CHLORINE DIOXIDE AND AUTISM**  
*<http://cdautism.org/chlorine-dioxide-vs-chlorine>*

This is a site that specializes in helping autistic children. There are at this time more than 500 autistic children with total recovery from their autistic symptoms and are completely back to normal. This was accomplished through the use of chlorine dioxide.

## ARTICLE 34

**CHLORINE DIOXIDE FACT SHEET AND EPA**  
*<https://www.aquamira.com/wp-content/uploads/documents/anthrax-spore-decontamination-using-chlorine-dioxide-pesticides-us-epa.pdf>*

EPA uses chlorine dioxide fact sheet. The EPA OK's chlorine dioxide for special decontamination. It is OK'd for use under Federal Insecticide,

Fungicide, Rodenticide law. Facts are given in many areas but especially decontamination using chlorine dioxide in water as well as gas decontamination in buildings.

### **ARTICLE 35**

#### **ANOTHER CHLORINE DIOXIDE FACT SHEET**

*<http://www.fisherthompson.com/pdfs/ABS-Chlorine-Dioxide-Teat-Conditioning.pdf>*

This is another fact sheet but covering much more ground showing disinfection of many areas. It states that chlorine dioxide is not the same as bleach as so many critics proclaim, however the subject of this fact sheet is the success at treating cow's teats and improving the sanitation of milk.

### **ARTICLE 36**

#### **EUROPEAN HEALTH COMMITTEE ADOPTS CHLORINE DIOXIDE**

*[http://ec.europa.eu/health/documents/community-register/2013/20130619126156/dec\\_126156\\_en.pdf](http://ec.europa.eu/health/documents/community-register/2013/20130619126156/dec_126156_en.pdf)*

Here you will see that the European Health Committee has adopted chlorine dioxide as an orphan medicinal product for the treatment of amyotrophic lateral sclerosis (ALS). That means that the government has designated chlorine dioxide as a substance that can legally be used in research for the treatment of ALS. However, as I mentioned earlier in Chapter 8, I believe they are not seeing much success so far, as they are not using the right protocol for this particular illness. However, it is my hope that as more and more people are helped, that most of these ALS victims will eventually be included.

### **ARTICLE 37**

#### **ADVANTAGES OF CHLORINE DIOXIDE VS CHLORINE**

*<https://www.fda.gov/downloads/food/ingredientspackaginglabeling/environmentaldecisions/ucm232745.pdf>*

This FDA paper mainly talks about replacing chlorine with chlorine

dioxide. It explains the advantages of chlorine dioxide over chlorine. This article has been removed from the internet with no reason given as to why.

### ARTICLE 38

#### **CHLORINE DIOXIDE AND SODIUM CHLORITE USED ON FOOD**

***<https://www.fda.gov/downloads/Food/FoodIngredientsPackaging/EnvironmentalDecisions/UCM143448.pdf>***

This link is mainly to talk about chlorine dioxide and sodium chlorite used on food. It talks about the advantages and problems, but of course, as always, the fact that it is used on food shows that chlorine dioxide is not poisonous. This article has been removed from the internet and no reason is given.

### ARTICLE 39

#### **CHLORINE DIOXIDE ON VEGETABLES AND MEAT**

***<https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/cfrsearch.cfm?fr=173.325>***

Again this article talks about the use of both sodium chlorite and chlorine dioxide. Basically chlorine dioxide is acidified sodium chlorite which then generates chlorine dioxide and generally is talked about for use with various vegetables and meats. The whole idea of all these articles is to show the reader that chlorine dioxide is approved for use with food and if it were poisonous the government would not be recommending it for use on foods.

### ARTICLE 40

#### **MICHIGAN STATE UNIVERSITY STUDIES CHLORINE DIOXIDE**

***<https://msu.edu/~brook/publications/aeis/aeis654.htm>***

This is an article by Michigan State University (MSU) at the above link about using chlorine dioxide to make water that will sterilize vegetables and other food products. Again proving chlorine dioxide cannot be poisonous. This article has been removed from the internet and no reason is given.

This is the last of the articles proving the usefulness of chlorine dioxide and showing it cannot be poisonous. Over a year ago I could have put thousands such articles all by governmental agencies and other large trusted organizations, but now, strangely, most of those articles have disappeared. You probably haven't noticed it, but things have changed. Very few such articles are now available to be read, but there are still some. But if you are not convinced by this time that chlorine dioxide and sodium chlorite are safe to take then you probably won't be convinced in any case. At this time I am not trying to prove to you that MMS will eradicate your disease, only that MMS is safe to take so that you can try it if you so desire, and prove to yourself that it works.

It's time to use this truth to set yourself free from high medical bills and those who would keep you sick.

## OTHER SODIUM CHLORITE PRODUCTS

When sodium chlorite is taken orally it is activated by the hydrochloric acid in the stomach and this produces chlorine dioxide. Following is a list of products which the main ingredient is sodium chlorite. These products are being sold now and have been sold for health reasons for many years, (one of them for 85 years). Keep in mind that ingredients on product labels can often times be cryptic, confusing, and difficult to understand. Similar to the food industry, there are often “hidden ingredients” in items. Unless one is well instructed on how to read labels, it may not be clear as to what you are getting. You may have to dig deep to investigate exactly what is in the item, but if you do your research you will find these products contain sodium chlorite which produces chlorine dioxide.

**AEROBIC 07** — *Aerobic 07 can be found by using “Aerobic 07 Stabilized Oxygen” in the search engine.*

There are a number of products containing sodium chlorite where it is advised to take without activation acid. However, you cannot take any form of sodium chlorite without getting some activation of chlorine dioxide in your stomach. This is because the human stomach contains hydrochloric acid (HCl) which helps the process of digestion. The manufacturer uses sodium chlorite to make this product and adds a few things that are not really active in the formula. Perhaps the thinking is that because these things are good that they will help out?

But the fact is that the thing that does the good in all these formulas is the sodium chlorite that immediately creates chlorine dioxide the minute the sodium chlorite hits the stomach and is activated by stomach acid. The manufacturer of Aerobic 07 states that their item is the best, and who am I to say it isn't the best? It might be. However MMS is a solution that is backed by 22 years and hundreds of thousands of people successfully using chlorine dioxide (MMS) to overcome hundreds of diseases in thousands of people.

It is not just the solution that does the good. I can tell you Aerobic 07 which is mostly sodium chlorite, is very good, but having the right protocols to follow when taking the solution is of utmost importance. We have learned with MMS that the chlorine dioxide must be present in the body for at least 8 hours and preferably 10 hours if one desires to overcome serious disease. But sodium chlorite from which chlorine dioxide is derived only lasts about one hour in the body before it is destroyed by various acids and enzymes. The protocols I have developed with MMS keeps the chlorine dioxide present in the body for 8 to 10 hours and sometimes more, depending on the protocol you are using. I have developed and updated over 50 MMS protocols. Instructions on how to use them are in my book, the *MMS Health Recovery Guidebook*.

**STABILIZED OXYGEN** — *Stabilized Oxygen is available in many health food stores and many other web sites. It can be found at: [wellstasis.com/stabilizedoxygen.htm](http://wellstasis.com/stabilizedoxygen.htm)*

Stabilized Oxygen has been for sale in health food stores since 1932. It is a 3.5% solution of sodium chlorite and in many cases and has been sold as high as 25% sodium chlorite. The instructions suggest taking various amounts of this formula of sodium chlorite and it is not suggested to pre-activate it. But as I said above, one normally has regular hydrochloric acid in the stomach. This is digestive acid naturally available in the stomach and it activates the sodium chlorite creating chlorine dioxide. Therefore people have been actually taking chlorine dioxide since 1932. That's over 85 years and there still are no records of anyone being hurt by chlorine dioxide. Always follow directions explicitly.

**DIOXYCHLOR** — *You can find information on Dioxychlor here: [www.alternative-health-group.org/dioxychlor.php](http://www.alternative-health-group.org/dioxychlor.php)*

This site has a great deal of data concerning Dioxychlor. Dioxychlor has the same sodium chlorite as MMS only it is a lot less concentrated. It is a solution of about 3% strength as opposed to MMS which has 22.4% strength sodium chlorite. The strength in the bottle, 3% or 22.4% doesn't matter. What matters is the amount that you put in your dose when you take it. Thousands of people have used Dioxychlor throughout the US and world. Dioxychlor has been around a little longer than MMS. However, the labeling of their product is a bit confusing. In other words, they do not

come right out and directly say what it is. They say it is chlorine with two atoms of oxygen attached to the chlorine atom. Well ask any good chemist and he will tell you that chlorine with two atoms of oxygen attached is simply chlorine dioxide.

Dioxychlor, like MMS, has been a successful product. It is a good product. I'm for it, however, Dioxychlor does not come with proper protocols that help one know how to fully recover their health from many illnesses. My book, the *MMS Health Recovery Guidebook*, has many protocols that if followed correctly will help one handle most all sickness and disease in the world of today. That is not claimed for Dioxychlor but it could be claimed if they wrote up proper protocols, or if they simply used my Guidebook and increased the amount of Dioxychlor to equal MMS amounts.

Also I should mention that all this time the manufacturers of Dioxychlor have not used an activator like MMS uses (a food acid), to pre-activate the sodium chlorite. The activator is not totally necessary as stomach acid is usually available, most of the time, so it does produce chlorine dioxide. However, based on my experience, I believe that if you pre-activate the sodium chlorite, it is more apt to get better results and often in less time.

The main reason I am telling you about Dioxychlor is that I want you to know that here is someone that has been selling sodium chlorite that turns to chlorine dioxide in the stomach for longer than MMS has been available. Thousands have benefited.

**BIO-CHLOR-DOX** —*Bio-Chlor-Dox is available here: [www.thewayup.com](http://www.thewayup.com)*

Here is another group that also uses sodium chlorite, but they have added their own formula of minerals, mostly trace minerals to their formula and they like to say that it is more effective. But again, they are using a very weak formula of sodium chlorite when compared to MMS. I do not believe that their extra minerals added to the formula are going to change anything. But the chlorine dioxide is going to do its job, and who knows, maybe those extra chemicals will help.

So in a pinch, if you can't find anything else I'd say grab it and use it. You can use the *MMS Health Recovery Guidebook* with this formula same as Dioxychlor. First off, compare the formulas, and if needed increase the drops of Bio-Chlor-Dox so you are using about the same amount of sodium

chlorite that the MMS book recommends. Be sure to start out slow and increase the drops slowly according to the Three Golden Rules of MMS.

## LIQUID OXYGEN

Quite a few products come under the label of Liquid Oxygen. Some of them are sodium chlorite based and some are something else. Liquid Oxygen, Oxygen Super Charge, 04 Oxozone, and Vitamin O are several of these products, but there are more. Who knows what their value is towards health and what, if any, other benefits there are. None of them that I know of have been used on a continuing basis to overcome cancer and other various incurable diseases like MMS has been used for 22 years around the world.

In so far as I know some liquid oxygen products contain sodium chlorite and some do not. That which is not sodium chlorite may not work really well or at all. The liquid oxygen that is sodium chlorite will maybe work pretty well, and if you use my protocol book with the right procedure it will hopefully work really well. It takes both, the chlorine dioxide and the proper protocol to make it work correctly. Naturally, in my opinion, if someone really wants to fully recover their health using a sodium chlorite solution, I would say the best bet is get some MMS and follow the proper protocols. But, if you can't get a hold of MMS, some of these other products may work if you can adjust the amounts properly.

## CTX

Put CTx into any internet search engine for a list of hundreds of Dentists using CTx products. It is a product made of sodium chlorite which furnishes chlorine dioxide. CTx is a dental spray and gel and those who sell it and dentists who use it say that it is a game changer in the dental industry. They say that it will reduce plaque and tartar build up to practically zero and that it will reduce cavities for all who use it at least by 80%. All other chlorine dioxide products mentioned here have been in use for over 20 years except CTx which has been sold in dental offices for several years.

## TWINOXIDE

TwinOxide is mostly for commercial operations but could be used to make MMS if needed. It is used for cooling towers, refrigeration, food processing, agriculture, hospitals, gardens, date farms, vegetable growing, and many other things. There are many sites that sell it, this is one such site: [\*www.pbcl.biz/products\\_twin\\_oxide.html\*](http://www.pbcl.biz/products_twin_oxide.html)

## Conclusion

There are many sites or stores that say nothing in any way about using sodium chlorite for disease control, but nevertheless people buy their products for that purpose. The reason that I have given the above information is in the event that sodium chlorite may not be available at some time in the future.

This book is not a treatise on various products and their uses. I have written this book about sodium chlorite/chlorine dioxide to encourage people to use MMS (which is sodium chlorite that when activated by stomach acid or a food acid, produces chlorine dioxide) in overcoming the diseases of mankind. I have listed these few companies that sell sodium chlorite products that, in a pinch, could be used with my book the *MMS Health Recovery Guidebook*, if for some reason you could not find MMS (sodium chlorite). In that case you would need to increase the amount of the product to match the MMS formula, and then follow the instructions in my book exactly to recover health from almost any disease of mankind. However, that said, if you or a loved one are sick, and especially seriously ill, I would encourage you to do all you can to find MMS and use the proper protocols in the *MMS Health Recovery Guidebook*, available at: [\*jhbooks.org\*](http://jhbooks.org)

## CHAPTER 12

# TESTIMONIALS

Below I have included some MMS testimonials for you to read. Space does not allow for more, however if you want to read scores and scores more you can search the internet as there are many on forums and various websites or go to this link: [www.mmstestimonials.co](http://www.mmstestimonials.co)

We do not furnish names of the writers of the testimonials given here because of privacy and so on. I have not corrected misspelled words or other grammar errors as it is not the custom to change anything of the exact wording of written testimonials which have been posted on a website.

### **Lung Tumor Gone**

The good news is that my sister's lung tumor was completely gone after only being on MMS for 40 days! She only took a one drop dose for 8 hours a day. By day 10, she started coughing up the tumor. I'm so very grateful for this amazing information and product! Thanks to all of you for your contribution to helping others regain their health! Blessings to you all!  
—R.D.

### **Symptoms of Full Blown Heart Disease**

At the age of 65 I had all the symptoms of full blown heart disease. I had heard that MMS would clear out my arterial plaque and remove cholesterol build up from my heart so I went on the pathogen cleanse. The article said that it would take about 3 weeks. I stuck to the regime strictly with a minimum of 8 doses of MMS per day, starting on one drop per hour and after a short time I noticed slight heart palpitations from time to time. I increased the dosage gradually, taking note of how it affected me and at times I had to reduce the dosage, going back half a drop. After a couple of weeks I noticed that my energy levels seemed to be increasing and that there was an increase in my overall wellbeing. It took over 7 weeks before I could take 3 drops per hour without any side effects and by that time I knew that my system had been flushed out resulting in a new feeling of health and vigor. That was 9 months ago and I still feel as healthy as when I was in my 20's. This has definitely added many healthy years to my life and

I recommend the treatment to anyone who has any symptoms of arterial plaque or heart problems. —K.B.

### **Heroine Free**

Thank you for giving our world MMS. I have personally helped quite a few people to get off a full blown heroin addiction in three to four days only with 3/4 drop of MMS1 an hour. This is every hour when they are awake. I have also included MMS1 baths, using 25 drops of MMS1 per bath. I have personally assisted a hand full of people with 100% unbelievable results. —R. England

### **Lyme**

My husband contracted Lyme from a tick in southeastern Idaho spring 2015. In the first three months, his vital signs were fluctuating and he had horrible, painful, papular skin rashes which would break and bleed. We went from MD to MD. You know the story: They told us to go to a dermatologist. Lyme travels in “packs” with other “friends,” such as bartonella, mycoplasma, erlichiosis, etc. etc. and invites in new friends and even parasites. When my husband developed staph and was oozing ounces of yellow serum from his head, I forced him back to an MD, and the MD told us to change our laundry soap. Eight months post bite, when the last infectious disease specialist told him over his encrusted, split, bleeding legs that he was fat, lazy, and probably just wanted to collect a disability check, he left her office, slumped in his truck, and said a prayer. Within an hour he had found a naturopath who agreed to see him THAT NIGHT. She sent him home with herbal tinctures. The herxheimer for BOTH of us was bad. (I was infected via sexual contact with my husband after about two months of him becoming seriously ill—I didn’t know Lyme can be easily sexually spread and spread to fetuses in womb)...beginning those tinctures cemented my belief that herbs could work. That allowed me to open my mind to other things we found combing the internet. This is how we found Jim Humble. As we had actually visited India and became ill only two weeks before my husband was bitten by a tick, I wondered if he had something like Dengue Fever from India. We were both seriously ill in India and after returning home, for six weeks, but then my husband was bitten and continued being very ill. The MMS is what first stopped the serious rashes. We both took it internally for about three months. It worked so well, that I think we stopped it only due to the taste. I have since read others take it in juice. My husband would ask me to bathe his rash-ridden body in a glass of MMS wherein I’d used about 25-30 drops of MMS and then filled the

---

6 oz glass with water. I also often added 1 T. DMSO to allow the MMS to penetrate through his skin layers to kill the nasty bartonella, which loves to reside in the skin layers. Anyone you see with permanent little “knobs” all over their face most likely has bartonella. Bartonella suppresses Lyme and then become the major offender. It can ultimately ruin the heart valves. My husband could feel the MMS working immediately on his skin. It was the only thing which stopped the painful, to-the-bone itching he suffered day after day (until we tried MMS on his skin). THANK YOU, Jim Humble, for being a humble warrior. May God bless you. We must tell everyone about MMS and stop the FDA rules from allowing our loved ones to suffer and die. My husband almost died at the hands of MDs who actually REFUSED treatment. I quoted to the doctor in front of my husband whose vital signs were fluctuating: “The Merck Medical Manual states that if patient has recently returned from a tropical or third-world country, and has fever, rashes, breathing issues, bloodshot eyes, etc., do not wait to detect exact pathogen, but begin treatment immediately with broad-spectrum antibiotic and anti-parasitic.” This doctor REFUSED. He was dead-set on finding the EXACT pathogen, whilst my sweet, poor husband was delirious and almost stopped breathing some nights. It sometimes seems the MDs would rather see us all dead. Hello? I am speechless after all of this. Only herbs, MMS, and regular supplements like calcium/magnesium and Co-Q-10 helped. The MDs took lots of money and some even refused to test him for Lyme. I am so done with them. My husband thinks he is recovered now, nine months later. MMS works. Thank you, Jim Humble!!!!!! God bless you!!!!!!! Spread the word, everyone! —D. USA

### **Cancer Gone**

Thank you Jim! My family still makes and takes your MMS. We will not change. So far 3 of my family members went to the doctors and their machines said the cancers are completely gone. What a blessing you have given. Cancer behind my mom’s eyes — Gone. Lymphnode cancer under the armpits of my mom — Gone. Lung cancer of my ex-wife — Gone. My cousin’s father-in-law was bed ridden and doctor gave him a month to live. He took MMS and now is hiking trails and up small mountains. We administered it according to Jim’s protocols. We used the doctors in that we went through the process of the doctors all along waiting for the scans to tell us what we knew, but needed clinical proof that it was gone. Doctor’s don’t understand what happened. We just say, “We changed their diet.” —D.M.

### **Strep Throat Infection**

I recently have had a serious problem with a strep throat infection which did spread to my kidneys causing severe pain and discomfort constant coughing and choking. I decided to follow the 1000 protocol with MMS. After only three days all symptoms have gone and I am feeling so much better. Thank you. —M., UK

### **Suffering from Coronary Artery Disease Since 1996**

I just had to tell the World...I was suffering from coronary artery disease since 1996 after having 2 heart attacks - 6 months apart. Doctors were offering a partial bypass surgery but I wasn't satisfied with opening my chest just to partially and temporary fix my heart so I was looking into all sorts of unconventional procedures and treatments. I had Chelation Therapy; Chelation Therapy with Plaquex (that actually made things alot better); Oral Chelation from several places; ongoing vitamins and minerals, CQ10, lots of garlic, Straus Drops etc. Nothing actually did more than make me feel a touch better and I still had to take my medication and my Nitro Patch daily.

Just recently I came across your MMS solution. I was fixing a computer for some old guy and he mentioned MMS. We got talking and he gave me a bottle of MMS and a bottle of Citrus and I promised I would give it a try. And I am so happy that I did. I have to say, I may be a little premature in saying certain things but the way I feel I just couldn't keep it locked inside any more. I was scared, to be honest, so I started very carefully with just a drop every hour but not more than 8 times a day. Then I started to take 2 drops every 2 hours again up to 8 drops. I was about to start taking more (after 2 weeks) when a started to feel exceptionally better. You have to understand, I was living with a daily dose of Angina Pains for years. I would go to bed at night and first had to wait for my heart to calm down enough not to echo inside my ears and to slow down so that I can fall asleep. I could not walk more than a block and a half without having to stop and wait for pain to go away...But now, after just 2 weeks, I started to feel totally different. I was not having any pain. At first I couldn't believe it but then I started to test myself. I would walk faster and further - nothing. I would walk up stairs - nothing. I would then run upstairs and NOTHING! No pain. I knew I needed to get into shape because I was losing my breath but there was no pain. There was only a great feeling of happiness for feeling like I use to when I was younger... I know that MMS did this. There is nothing else that could have been making this turnaround in my health. I want to tell everyone. I want to tell people and I wish someone could show

me the best way to do that in a way that people would believe me and not think that I am just trying to sell them something. In any way, I thank the person whom computer I fixed and who gave me the Miracle Solution and I thank you Jim for coming up with this brilliant solution and for giving it to the World unselfishly. —N.B.

### **Gum Disease / Heartburn**

I'd had gum pockets that were getting larger and a couple years ago had the expensive gum treatment my dentist provides. It worked but the problem returned recently. The dentist recommended a toothpaste with higher than normal fluoride, which in my opinion and research is not a safe thing to have in your body. The worst cavity prone period of my life I was using fluoride toothpaste and drinking fluoridated water. I recalled MMS, ordered, and this time I brushed with MMS once a day for a month even though it's recommended to use twice a day, then I flossed and I swished the remaining mixture as a mouthwash. It foams up when brushing which was a surprise. The day after the first treatment my gums were already pinker and the fuzzy feeling on my teeth was gone and has been since. I have the glassy smooth feeling on my teeth which I love. Went back to the dentist about 4 or 5 weeks later and the hygienist told me I'd had major healing and was surprised I'd made my own toothpaste. She actually printed the chart out that shows the pocket measurements for every tooth, and every single one had improvement and almost every one was in the normal range for gum health after this short period. There are actually a couple brands of toothpaste that exist with the active ingredient, CD, if you want something premixed. Dioxibrite and Closys are two I looked at but haven't tried.

My one year old daughter was also teething, and she'd had a fever for four or five days and was just a miserable, sad sight. It would keep returning after several rounds of children's ibuprofen which we didn't want to risk overuse. She went to her pediatrician but they said there is nothing they can do but wait it out. I just could not believe that. I gave her 1/4 of a drop, and the next day the fever was drastically reduced and gone the day after that.

A friend of mine had a surprise case of heartburn so bad that he thought he may have been having a heart attack, and legitimately questioned whether he was dying. After he took some MMS it was completely gone and didn't come back. More to come I'm sure. —B. USA

### **Autism**

I have been suffering along with the neighbor's autistic son's horribly disturbing agitation, screaming, yelling, crying, banging, stomping and noisy insomnia for 4 years. Suddenly the child is 97% content and quiet. I found out that they are using MMS and bought some for myself. I am trialing it on my dogs skin condition by spraying topically and by dosing their drinking water. I have found it to be a perfect deodorant and tonight I got some flea bites from an infested basement area which were burning and stinging. This went away immediately after spraying with the 40 gtts / 4 ounces solution. WOW I am going to start oral dosing myself tomorrow. —H. Panama

### **Best Natural Remedy**

Medical profession gave me no hope after acquiring hydrocephalus in an auto accident. I went from a nursing home invalid for two years to become a productive vibrant citizen. I now can drive, run, and live a normal life. MMS also cured deep vein thrombosis and cured me in 2 days of MRSA. God bless this work forever! —C.K.

### **Breast Cancer**

I was suffering about breast cancer and I contacted Mr. Jim Humble who advised me about MMS1. After taking Protocol 1000 during 21 days then I went to the hospital for a checkup whoooooooooooooaa! The doctor told me good news I am free from breast cancer. I would like to say thank you Mr. Jim Humble for saving our life thank you so much. —H. UK

### **Dementia — Memory Came Back**

An elderly guy (in his 80-90's), who claimed he was the last survivor of the chemical company (since closed), that use to operate in New Plymouth, and made Agent Orange, and many other toxic sprays. After 50 odd years working there, he said that he was so full of toxins that he couldn't remember things that he had done the day before, along with other health effects relating to a build up of toxins in the body. Someone told him about MMS, which he tried. He phoned me on the second day all excited, saying that he remembered all he had done the day before. He claimed to be 100% better within about a week on MMS. He is now an advocate for MMS, telling everyone who is willing to listen. —P.

### **Colon Cancer**

My sister's husband was diagnosed with colon cancer last year, and thanks

to God and MMS he is fine right now. He is so grateful that he wants to be part of this blessing and pass it to many more. —L.B., USA

### **Bleeding in the Eye**

I have a client here in Jamaica that has severe diabetes, 20 years on injections. She started taking MMS (6 drops in the morning and 6 drops at night), not even dropping them in her eye. She was scheduled for surgery and had to travel 3 hours to get to the hospital where she would have the surgery. She first went for consultation and the specialist said she definitely needed the surgery and urgently. Her eye looked like she had been punched in it. The sugar in the blood is like glass in the eye. That is what causes the bleeding. She was on the drops for a couple of weeks and her eye visibly started turning from blood red to pink and then to white (normal). She went to have the surgery and the doctor was shocked (to say the least) he said he didn't understand how this happened but he sent her home and said she didn't need the surgery again. —J.

### **Fibromyalgia, H-Pylori**

H-Pylori — a stomach bacteria — was killed after only 2 capsules of MMS — 78% calcium hypochlorite powder — which made the use of traditional antibiotic 3 months protocol — totally unnecessary. Fibromyalgia was mostly gone — pain level difference — after 5 days of — same as above — calcium hypochlorite capsules — 3-4-4-5-5- per day for 5 days — amazing results — thank you Jim Humble. —R.R.

### **HIV Infection**

I am very grateful about your gift of MMS to the world and to me because it has healed me completely from Hiv-infection. I use MMS now for over 2 years, with fullest satisfaction. I did the Hiv-test back in 1990 and was put on meds in '96 and I used them up until 2010. Because they were killing me I stopped taking them altogether. But then MMS came and ever since then I live a healthy life. I will go on using it as long as it is available. Thank you Jim Humble for all you did to me. —J.

### **Success With MMS and MMS2**

I am writing to declare the success I am having using MMS to defeat my Lyme disease. I contracted Lyme 2 years ago from an insect bite. At the time i was bitten, i knew nothing about Lyme disease. Since being bit, I started to get weird things happening to my body. Little did I know that they were all symptoms of Lyme. I am a fairly healthy person, so it took a while before it got a strong hold on my immune system. Last March I got

what I thought was the flu. It was the worst flu I had ever gotten in my life. I hurt from every pore of my body. I began to take echinacea but it didn't help. Since I had MMS in the house I decided to give it a try. Well that did the trick! I felt well again within a short time. I stopped taking it since I seemed to be back to my old self. After a couple of days, the symptoms came back and that's when I realized that I was dealing with some other illness and not the flu. It took a lot of investigative work to discover that I had Lyme disease. My medical doctor was absolutely no help at all. In fact she was a hindrance. I went online and used a symptom checker and it indicated I probably had MS or Lyme. Since the MMS was helping, I began using it again, and researched as much as I could on how to treat my symptoms. I began protocol 2000. I also contacted a naturopathic doctor in my city for support. To my great surprise, she supported using MMS. She recommended using MMS in an enema which helped a lot. I am using MMS2 as well. Both protocols work well together. If it were not for MMS I believe I would be in the hospital fighting for my life right now. My symptoms were severe and the pain was horrible. MMS is a miracle in my opinion! —B.B.

### **MMS Works, MRSA Has Not Returned**

Please do not listen to the false unproven claims of the negative claims of the naysayers concerning MMS. Last year I came down with MRSA which the medical establishment finds very difficult to treat since many antibiotics have lost their effectiveness against this disease. I chose to try MMS to treat my MRSA. My sores started to dry up right away and I was completely healed in one week. I'm telling you that IT WORKS! I did not get sick at all when taking it. MRSA has not returned —A.

### **Morgellons**

I tell you it was a miracle how I got MMS in my hands, I was suffering with what I believe now to be Morgellons. My doctor told me, I know what is it, I can't diagnose it and I can't treat it and walked out of the room. I also had been fighting candida for years with nothing working it would get better and come back. My daughter had asked me to find a product that had helped her with a health issue, I found a product I thought was what she wanted. Soon I received an email saying my MMS was being shipped. I said "what is MMS"? I researched MMS I could not believe what I was seeing it was exactly what I needed for the symptoms I was having. I started the protocol almost immediately the sores and itching was getting better. Today the Morgellons and candida are gone. I have gone

to iridologist and when she saw me she said my goodness “I have never seen anyone heal like that, what did you do” I told her how I got the MMS she said you need to write that down and share it with others who may be suffering with Morgellons. I am alive and healthy today because of MMS. I was contemplating suicide because of the pain and itching and the inability to sleep for a year prior to finding this wonderful product. I thank God for his provisions for his people. I believe God let me stumble onto an inexpensive product that would heal my body. Thank you Jim Humble for being willing to stand up...to inform people that we don't have to depend on pharmaceuticals to be healthy. —J.S.

### **Cancer and Asthma Cured**

I want to testify to the fact that I treated my mum who had colon cancer stage 3 with MMS and she's now totally free of it in just 3 months. Also, my son has been suffering from asthma since when he was about 3 months old and now after doing the nebuliser therapy, he's free from it. For about 2 years now, he has not had any attack. —B.

### **Prostate Cancer — PSA Gone Down**

I was told that I had prostate cancer and that my P.S.A. reading was 16 where the normal reading is between zero and four, after just 6 weeks of MMS my P.S.A. reading had gone down and my doctor was amazed at the improvement. Other benefits of MMS are hair and nail growth, also my little injuries seemed to heal much quicker than normal. I would recommend you give MMS a try. —K.G., Spain

### **Dog Cancer — Obvious Massive Healing has Taken Place**

I recommended MMS to my friend who had recently lost a dog to cancer, and was about to lose another even after spending \$18,000 for both. His pets are his children so this was, undoubtedly, devastating. This surviving dog had difficulty moving, could not jump on a couch, was on pain meds, consistently urinating herself, and had massive abdominal swelling. Within days she was able to jump up on the couch, within a week or two she was running through a field, another week she was off her pain meds and the swelling was gone. You could see her rib cage again, like normal. The fatty deposits on her skin, which are another form of cancer, were also disappearing. He used the cup2 protocol from pets section of the newest book. Will see if he can make a video after he takes her in to the next ultrasound, but its extremely obvious massive healing has taken place. And all for \$25 for the two bottles with a ton to spare. —B.

### **Severe Feminine Itching/Lyme Disease**

I have struggled with candida (then thrush in mouth) since I was a newborn! My mother told me she could not get rid of it with anything. Finally, the doctor gave me Gentian Rose. I don't think that is even available anymore. It went away, but I've struggled with candida most of my adult life. Last week I had such severe feminine itching that I couldn't even sleep. That's when I remembered MMS! We used it initially 6 months ago to fight Lyme which my husband contracted from a tick and gave to me. So a few days ago when I couldn't sleep due to horrible itching to the point of pain, I made up a glass of MMS with 4-5 drops, drank it, and ONE HOUR later there was no itching. THANK YOU, Jim Humble! You also saved my husband from being eaten by Lyme and bartonella! THANK YOU, THANK YOU, THANK YOU! —D., USA

### **Joint Pain**

I started to get pain in finger joints, working as a chef. 2010 I saw an interview with Jim Humble. Then I watched testimonials on you tube. I saw a Dutch guy telling about his ill joints and about a rapid improvement. I bought some sodium chlorite online and started to take the drops. I took as large doses I could several times a day (up to 15 drops). The citric acid was a terrible activator. However my joints were completely healed in 2 weeks. Now 6y later My joints are still great. I only used MMS for a month... Thank you Jim Humble! —M., Sweden

### **Infection — When Medicine Fails**

My problem started one morning a few months back getting out of bed when I noticed my feet were swollen, red and sore to touch. I didn't think much of it for the next couple weeks, but because it was getting worse and not going away I asked my friend, S, to take a look. She said I needed to get to the doctor right away. I went to my doctor and the only thing she could tell me by looking was that I had a very bad infection of some sort and she would prescribe an antibiotic. I took the meds for 10 days and the redness faded slightly, but the swelling and pain remained about the same. I went back for a checkup and she again told me she didn't know the cause was, but she would give me some water pills for the swelling. In the following days I had various tests done at the VA hospital and they also had no idea what the problem was or how to get rid of it. It was at this time S suggested I try MMS Protocol 1000. After 3-4 weeks it was gone and has not returned. S and MMS made a believer out of me and I keep my MMS handy for whatever comes my way. —D., USA

### **Bleeding Gums**

I have been using MMS since July 2016. I used it successfully to get rid of my bleeding gums. My gums used to bleed every time I brushed and flossed my teeth. Within a week of using MMS to rinse my mouth, my gums stopped bleeding. Then I developed tooth pain and sensitivity. I threw out my Sensodyne toothpaste and started brushing with Bentonite clay while continuing to use MMS rinse once or twice a day, morning and night was enough to keep gingivitis away. No more painful teeth, and no more bleeding gums. I thank God and everyone out there working diligently to get the word out about MMS. —W., USA

### **IN CONCLUSION**

It is my hope that the information put forth in this book is a help to you. We are living in difficult times. MMS is something that can help you through any number of challenges you might be facing now or in the future. It's always good to be prepared. Learn about MMS now, it just might come in handy, maybe even save your life, or that of a loved one.

In this world there are millions of really great people who only wish to enjoy their lives. They have no wishes to rule other people or to take things they have not earned. There are however, a relative very few people who wish to control others and tell everyone how to live. They feel that the world should bow to them and give them everything they could possibly want and that the world should be ruled according to their beliefs. This world has suffered because of these few, for thousands, or probably millions of years. It's time for change. It is time for everyone to know that most of the diseases of mankind can be overcome for less than one percent of the cost of mainstream treatments.

So change your life. Learn to use MMS. I don't sell it, but hundreds of people do. You can find it on the internet, or you can make it for yourself. Industry uses the chemical for a thousand different things. It is all throughout industry. It cannot be eliminated from the industry of Earth. Remember the terms sodium chlorite, chlorine dioxide, and calcium hypochlorite (which produces hypochlorous acid) as they are the main chemicals for overcoming nearly all of the diseases of mankind.

And now, seeing as this book is about how to enjoy vibrant health, I'll leave you with two of the most important healthy practices of all times. They are — ***always do the right thing*** and ***help one another***. Live a good life, good fortune to you along the way, and finally, we expect to meet you somewhere along the road to Heaven.

## ABOUT THE AUTHOR

Jim Humble first began his work in the health field in his early 20's when he became the manager of a health food store in Los Angeles, California. He authored a 200 question "Nutritional Evaluation Test" that determined the vitamins, minerals, proteins, and fats a person's body might be deficient in. The test was later computerized and was considered by many to be the most accurate method of determining deficiencies known at the time. Over the years Jim has maintained his interest in alternative health, and worked with numerous healing modalities including healing his own broken neck in record time using magnets. He has authored many successful books on various subjects.

Jim first started his career in the Aerospace industry, where he quickly became a research engineer. He worked on the first intercontinental missile, wrote instruction manuals for the first vacuum tube computers, worked on secret radio control electronics, and dozens of other "state of the art" electronic projects at Hughes Aircraft Company, Northrop Aircraft, General Motors Research Defense Laboratories, and others.

After 20 years in the Aerospace Industry, Jim went into gold mining where he developed methods of gold recovery that replace the use of mercury to help overcome health issues for small miners. He wrote five books on the subject of recovering gold from its ores. In 1996, while prospecting for gold in South America, he discovered what has come to be known as MMS, a simple health formula that eradicates most diseases. In the years that followed, he worked to further improve the formula. Eventually a missionary group invited him to Africa where he successfully helped over 5,000 malaria cases and victims of other diseases recover their health. Since that time, hundreds of thousands of people have used MMS to recover their health from a wide range of diseases. His current developments on the use of MMS are outlined in the *MMS Health Recovery Guidebook* which is available at: [jhbooks.org](http://jhbooks.org)
