

LEASHVIEW

Car and Key tracking for Car Dealerships

Lost Keys?

Missing Cars?

Staff spending hours searching?

We know that car dealership can have hundreds of cars worth millions of dollars across multiple locations at any given time. Keeping track of vehicles, keys and books is extremely time consuming and expensive. LeashView is here to help!

How It works

Each corner of the dealership has long-range gateways coupled with multiple short-range gateways scattered throughout the showroom and service bays creating a geo-fence around the entire dealership. A Leash is inserted into the car glove box and another attached to the keys. The Leash is matched to the correct vehicle and this can be integrated with VIN readers if required. Authorised staff and management will have visibility over all cars and keys through the LeashView platform 24/7.

HOW IT WORKS

Testimonial

Mercedes Benz Brighton recently installed the Leash it solution to secure 400 cars around thier dealership Russell Morris from MB Brighton explains why!

"It's anticipated that working with Leash It will not only improve efficiencies across the dealership, we believe it will seriously impact our "loss of Key", security and insurance costs-making the introductions of Leash It system, commercially, a no-brainer.

How LeashView Helps

Compliance Management

- Remotely complete stock takes hourly, daily, weekly or monthly
- Set rules to make sure all cars & Keys are being stored in correct locations and provide compliance reports
- Instantly organise car recalls of stock on hand.
- Ensure only appropriately certified staff have access to specialised equipment.

Check in and out

- Enable staff to search for cars & keys location in real time
- Receive real time alerts if a car or keys reach exits or designated areas.
- See location history and build records of asset movement over time
- Identify bottlenecks, unusual movements and over capitalisation areas
- Identify idle cars & keys

Monitor, analyse and act on your data

- Create automated email or sms updates.
- Collected data can be analysed to provide better business insights
- Easy to use dashboard and analytics tools
- Detailed reporting on utilisation, compliance and cars on hand
- Reconcile your existing cars register easily with real time inventory levels.

Rules and Alerts
