

720 SERIES TEMPORARY FENCE

TEMPORARY FENCE

Protect the Public Against Possible
Hazards Related to Ongoing Construction.

PRODUCT DETAIL

Features & Benefits

Brief Introduction

Construction temporary fences are used to protect the public against possible hazards related to ongoing construction.

Since the construction fences will be removed at the completion of the project, the easy and quick installation seems to be the prior factor that needs to be considered. That's why many customers come to SKYHALL® Fence for fencing solutions.

We also manufacture Australian temporary fences to meet the needs of Australian and New Zealand Markets.

Protection Level

Applications

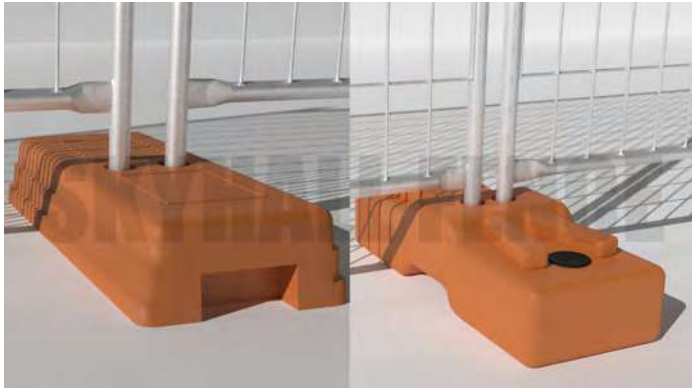

Functionalities

MODULAR PANELS

Lightweight panels are composed of round pipe frames and welded infill meshes. The modular components are quite suitable for quick installation.

EASY TO INSTALL

You don't need to dig holes or lay foundations for installation. Just insert fence panels into the corresponding plastic bases and fill some water or sand into the bases, and there comes the end of the project.

ANTI-UV BASES

At least 3 types of anti-ultraviolet agents are added to the plastic bases to resist the corrosion of UV rays and provide excellent anti-aging performance.

AVAILABLE COLORS

All colors are available here for temporary construction fences, but Zinc is what we highly recommended as it's quite popular among our customers.
