

313 SERIES CONCERTINA BARBED WIRE

CONCERTINA BARBED WIRE

Upgrade Your Metal Fences to a Higher Security Level With Barbed Wires.

PRODUCT DETAIL

Features & Benefits

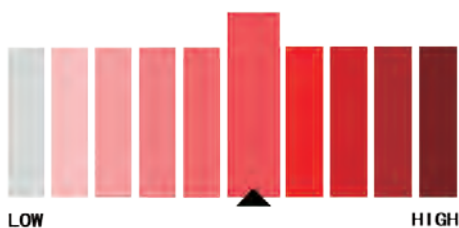

Brief Introduction

Concertina barbed wire, like our BWE barbed wire, is made from a single strand of low carbon or high carbon steel wire.

The main strand line of concertina barbed wire is surrounded by four-point barbs. The sharp barbs are twisted by double strands of barb wires. They are arranged at a certain distance on the main strand line.

The whole concertina barbed wire is presented in a spiral shape. They are usually used to combine with high security fences to provide higher defensive performance.

Protection Level

Applications

Functionalities

HIGH SECURITY

The concertina barbed wire is surrounded by four-point barbs on the main line, largely increasing the difficulty for intruders to pass through or make any damage. Due to its sharp edge, concertina barbed wires are widely used to combine with other fencing for a higher level of security.

HIGH DURABILITY

SKYHALL® The fence provides high-quality snake-bellied barbed wire mesh, which is pre-heated and galvanized to ensure that it is durable enough to prevent rust and corrosion, and the surface is bright and beautiful.

SPIRAL SHAPE

The main strand line of concertina barbed wire is surrounded by four-point barbs that are arranged at a certain distance. The whole concertina barbed wire is presented in a spiral shape, making it harder to cross.

UPGRADE SECURITY LEVEL

Concertina barbed wires could be combined with various fences like high security fence or anti-climb fence for advanced security barriers.

WIDE APPLICATION

Concertina barbed wires are economical and easy to be installed on any fencing surface for different uses. They are normally applied in prisons, military fields, national security facilities, and other places that need high security.

SURFACE TREATMENT

Concertina barbed wires are pre hot dipped galvanized to fight against corrosion and provide longer service.
