

358 FENCE

Reliable High Security Fences Promise Solid Guard for Your Projects.

PRODUCT DETAIL

Features & Benefits

Brief Introduction

High security fence is also called a 358 fence. It is a kind of metal fence with high strength, high density, and high security.

358 fence is highlighted by its small mesh opening which is 3'x 0.5' in general. That's where it's different from normal metal fencing. The exclusive feature enables high security fences anti-climb and anti-cut.

High security fence is always combined with razor wire, barbed wire, and concertina wire to provide a higher level of security.

Protection Level

Applications

Functionalities

HIGH DENSITY

358 fence is true with high security firstly because of its high density. The meshes are small and dense. Generally, SKYHALL® Fence provides 3' x 0.5' mesh size but you may choose other sizes alternatively according to your projects. Just check the specification above for a choice.

ANTI-CLIMB

As we mentioned, the meshes of high security fences are too small for fingers to stick in, let alone climb on. This fence is very effective in preventing climbing.

ANTI-CUT

Small tools are not powerful enough to cut the mesh wires off while the capable cutters are usually very big to reach into the mesh. Therefore, the 358 fence can stop cutting successfully.

ANTI-THEFT

Intruders can hardly climb across or walk through the high security fences due to the fence's anti-climb and anti-cut features. That's why many places install this type of fence for security.

AVAILABLE COLORS

All colors are available here for the high security fence, however, we recommend Dark Green of RAL6005, Granite Gray of RAL-7026, Telegrey 2 of RAL-7046, Beige of RAL-1001, and Silver as the reference colors since they're extraordinarily marketable among our customers.
