Agency Coordination for the I-526 PEL Study

SCDOT AND FHWA COORDINATION

Project coordination meetings were held monthly with SCDOT and FHWA during the development of the PEL study. In addition, formal coordination with FHWA occurred during four coordination points that served as check-in points to confirm progress to date, review any issues or concerns, and lay out next steps to achieve the next coordination point. The coordination points coincided with the following milestones:

- Coordination Point 1 PEL Initiation (March 23, 2020)
- Coordination Point 2 Purpose and Need Statement (February 18, 2021)
- Coordination Point 3 Alternatives Screening (September 13, 2021)
- Coordination Point 4 PEL Document

KEY STATE AND FEDERAL AGENCIES

The following state and federal agencies were invited to participate in the PEL process:

- South Carolina Department of Archives and History
- South Carolina Department of Health and Environmental Control
- South Carolina Department of Natural Resources
- National Oceanic and Atmospheric Administration, National Marine Fisheries Service
- United States Army Corps of Engineers
- United States Environmental Protection Agency
- United States Fish and Wildlife Service

These are critical agencies that were specifically engaged in the PEL process based upon the identified resources that are anticipated to be affected. A more expansive list will be developed as part of the NEPA Coordination Plan, which will also identify NEPA Participating and Cooperating agencies. The Public Involvement Plan for the project presents a more expansive list of stakeholders.

The state and federal agencies listed above were also invited to attend two agency coordination effort (ACE) meetings and all PEL public informational meetings. ACE meetings with these agencies were held to discuss specific subjects of interest, concerns, and recommendations at key milestones in the PEL process. Each agency will also receive a copy of the Final PEL study, with opportunity to review. This is the only planning product contemplated for submission to these agencies for review.

One federally recognized tribal nation, the Catawba Nation, is active in the PEL study area. Coordination with the Catawba Nation will include notification of and invitation to review the Final PEL study.

MPO COORDINATION

Coordination meetings were also held with the Berkeley-Charleston-Dorchester Council of Governments (BCDCOG), which serves as the Charleston Area Transportation Study (CHATS) Metropolitan Planning Organization (MPO). The CHATS MPO will receive a copy of the Draft PEL study, with opportunity to comment.

April 3, 2020

Dear Agency Representative:

Subject: Invitation to Participate on the Planning and Environmental Linkages Study for I-

526 Lowcountry Corridor EAST, Berkeley and Charleston Counties

Dear Sir or Madam:

The South Carolina Department of Transportation (SCDOT), in cooperation with the Federal Highway Administration (FHWA), is evaluating existing and future transportation demands for the entire I-526 corridor from just south of Paul Cantrell Boulevard in West Ashley to just south of US 17 in Mount Pleasant. Named the I-526 Lowcountry Corridor (I-526 LCC), this effort is intended to improve the operational characteristics within the corridor for both local and through traffic. SCDOT has separated the I-526 LCC into two logical termini: the I-526 LCC EAST project and the I-526 LCC WEST project. The purpose of this letter is to initiate interagency coordination for the I-526 LCC EAST project.

The I-526 LCC EAST project is approximately ten miles long and extends from Virginia Avenue in North Charleston to US 17 in Mount Pleasant. SCDOT and FHWA have determined that a Planning and Environment Linkages (PEL) Study will be prepared for the I-526 LCC EAST project. A PEL study is a collaborative approach to decision-making used to identify transportation issues and environmental concerns. This integrated approach considers environmental, community, and economic goals early in the planning process and uses this information to streamline the transportation project development and environmental review process. The resulting information of a PEL study will be carried forward into the next phase of the project development process, the National Environmental Policy Act (NEPA) process. More information on the PEL process can be found at

 $\underline{https://www.environment.fhwa.dot.gov/env_initiatives/PEL.aspx}$

To encourage early, meaningful, and productive public and stakeholder engagement, SCDOT invites you to participate in the I-526 LCC EAST PEL study. During the course of the PEL study, agency coordination will occur through a series of Agency Coordination Effort (ACE) meetings. At the January 9, 2020 ACE meeting, we presented an overview of the PEL study process and provided a draft purpose and need statement for agency comment. Future ACE meetings will be held to review alternatives to be evaluated during the PEL study and the PEL document.

Following the January 9, 2020 ACE meeting, the draft purpose and need statement was revised as follows: *The purpose of the study is to improve travel time reliability and reduce congestion along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant.*

Attached for your review is the project location map and an updated presentation from the January 9, 2020 ACE meeting which includes the updated purpose and need. We are also attaching some of the existing conditions boards developed for the first round of public meetings that have since been postponed.

Please provide your agency's comments on the draft purpose and need statement and any information your agency might have that would be helpful in evaluating potential environmental impacts of the project. If applicable, please identify any permits or approvals that may be required by your agency.

Please respond with written comments on the draft purpose and need and your willingness to participate on the project within 30 days of the receipt of this letter to:

Chad Long
South Carolina Department of Transportation
Director of Environmental Services

Mr. Chad Long South Carolina Department of Transportation Director of Environmental Services Post Office Box 191 Columbia, SC 29201

Re: Invitation to Participate on the Planning and Environmental Linkages Study for I-526 Lowcountry Corridor East, Berkeley and Charleston Counties

Dear Mr. Long:

The SCDNR understands that the South Carolina Department of Transportation (SCDOT), in cooperation with the Federal Highway Administration (FHWA), is evaluating existing and future transportation demands for the entire I-526 corridor from just south of Paul Cantrell Boulevard in West Ashley to just south of US 17 in Mount Pleasant and will be preparing a Planning and Environment Linkages (PEL) study to identify transportation issues and environmental concerns. decision-making used to identify transportation issues and environmental concerns.

The SCDNR also understands that during the course of the PEL study, agency coordination will occur through a series of Agency Coordination Effort (ACE) meetings and that our agency is invited to participate in these efforts. According to information presented at the January 9, 2020 ACE meeting, the draft purpose and need statement is as follows: The purpose of the study is to improve travel time reliability and reduce congestion along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant. The SCDNR offers no specific comments or concerns regarding the draft purpose and need statement.

The SCDNR accepts the invitation to participate in the environmental review of this project and looks forward to working with the FHWA and SCDOT in the National Environmental Policy Act (NEPA) process. Thank you for the opportunity to participate in the review of this project and provide comments. Please feel free to contact me as you deem necessary regarding this project. I can be reached by email at daviss@dnr.sc.gov or via phone at 843-953-9003.

Sincerely,

Susan 7. Davis

Re: SCDOT Project, I-526 East Lowcountry Corridor Improvements, Charleston County, SC

FWS Log No. 2020-CPA-0025

Dear Mr. Long:

The U.S. Fish and Wildlife Service (Service) is submitting this letter upon request from the South Carolina Department of Transportation (SCDOT) office in Columbia, South Carolina. In cooperation with the Federal Highway Administration (FHWA), SCDOT has initiated a Planning and Environment Linkages Study (PEL) and is seeking early engagement and comments from resource agencies regarding the I-526 East Lowcountry corridor project. Information gathered during the PEL study will be integrated into the National Environmental Policy Act process. Briefly, the project is to widen I-526 from its interchange at Virginia Avenue in North Charleston to US Hwy 17 in Mt. Pleasant. The SCDOT and FHWA have also requested agency comments on the draft Purpose and Need which is to "improve travel time reliability and reduce congestion" along the corridor.

As a resource agency, the Service is primarily focused on conservation of the Nation's natural resources including species that are protected under the Endangered Species Act of 1973 (ESA). Therefore, we rely upon the expertise of transportation agencies to recognize the infrastructure's deficiencies and develop appropriate measures to resolve challenges. We do however appreciate the opportunity to provide input on this matter. Upon review of the information provided the Service agrees that the draft Purpose and Need is appropriate for the I-526 East project.

If the I-526 East proceeds with the FHWA as a partner consultation under section 7 of the ESA will be required. Once a preferred alternative is selected, it would be necessary for SCDOT to survey the selected corridor for the presence of species protected under the ESA. The Service recommends that survey efforts also include at-risk species. Salt marsh wetlands are predominant along the I-526 East corridor and may be significantly impacted by any selected alternative. We recommend that all efforts be taken during the planning stages to consider and design alternatives that avoid impacts to salt marsh resources. The PEL study must also consider potential impacts to migratory birds. Flight patterns, foraging, and nesting of migratory birds may be adversely affected by the corridor improvements, particularly during construction phases of the project.

The Service appreciates the opportunity to provide input at this early stage of the project's development. If you have any questions, please contact Mr. Mark Caldwell at (843) 300-0426, or by email: mark_caldwell@fws.gov, and reference FWS Log No. 2020-CPA-0025.

Sincerely,

Thomas D. McCoy Field Supervisor

Subject: Re: 526 East Planning and Environmental Linkages Study

Hi Cindy,

Yes, we would invite NMFS to become a participating agency once we initiate the NEPA process. There is currently no funding for RW or Construction so that is likely years from now.

Thanks for the response. Look forward to working with you on this project!

Chad

Hi Chad,

Sorry we did not get back to you sooner. We do want to participate in the I-526 LCC EAST PEL study. I do have one question, do you anticipate inviting NMFS to also be a participating or cooperating agency later in the process? Regards,

Cindy

Cindy Cooksey – NOAA Chris Stout – OCRM

Blair Williams – SCDHEC OCRM Henry Phillips – SCDOT ENV

I-526 East Lowcountry Corridor

Chad Long - SCDOT

• First formal Planning and Environmental Linkage (PEL) study for SCDOT. Comments will make a huge difference at this stage. Consultant – CDM Smith will be handling the process. Karen Hadley has experience with PEL projects in Colorado.

Mark Lester - PM for CDM Smith

- Project Overview of the ongoing Lowcountry WEST corridor. Study limits extended to the Cooper River. Currently in the NEPA phase – reasonable alternatives presented to the public during multiple meetings in November of last year. Preferred alternative will be determined later this year.
- Project Overview Lowcountry EAST corridor picks up where WEST stops and continues to US 17 in Mt. Pleasant. Use the PEL phase to narrow the range of alternatives to streamline the NEPA process. Currently developing the P&N and would like agency input. PEL process will last approximately 2 years ending with a path forward (road map) for the project. 10 miles in length with 5 miles elevated and 5 interchanges. Project is focused on mainline, but will assess if the ramps need additional capacity and ramps may need reconstruction depending on what improvements are necessary for the mainline.

Karen Hadley – CDM Smith

 What is a PEL study? Linking planning and ENV studies together. Identify transportation issues, priorities and environmental concerns. Gather details to use information in further studies.
 Streamline the NEPA process.

- Benefits collaborative approach involves agencies early, reduces delays in implementation, identify key resources, promotes ENV stewardship. Can identify areas that can be constructed in a phased approach or one large project.
- Process (send link to everyone online) Since the process will be rolled into NEPA there is a legal process. Requires 4 meetings with FHWA.
- P&N Draft to increase capacity and reduce congestion. Need roadway deficiency and mobility.
- Project Goals provide guidance to develop alternatives. Coordinate with local plans and project. Improve road infrastructure to accommodate increased traffic. Enhance mobility of people and goods. Improve modal interrelationships with ports and transit. Improve accessibility of the Cooper River upstream of the Don Hold Bridge. Improve Seismic resiliency.

Karen –

- Three components Road, Bridge and Interchanges
 - o Roadway Improvement needs insufficient capacity, deficiencies in median widths....
 - o Bridge Improvement needs Cooper River insufficient capacity, ...
 - Wando Bridge insufficient capacity, ...
 - Grade separated bridges (4) insufficient capacity, ...
 - Marsh Bridges (6) insufficient capacity, ...
 - o Interchange Improvement Needs (5) insufficient ramp capacity
- Any reasonable alternatives identified will need to be analyzed during the NEPA stage.
- Lowcountry corridor website ties the EAST and WEST project together
- Public involvement want to make it clear that there are separate projects going on EAST, WEST and Extension. Plan to have a public meeting in Spring 2020.

Discussion:

Cindy (NOAA) – asked for more information regarding the goal of improving accessibility of the Cooper River.

Karen and Mark – Cooper and Don Holt bridges have not been hit, but there are monitors that have been struck. Need to know the future of the terminal to see if there are navigational concerns that we are not currently aware of. Improvements to the large bridges will be very costly – can they be widened? Would it be less expensive to build a new structure?

Joy – there are a lot of decisions that need to be made during the planning stage because of the complexity of the project and the bridges. Public outreach office will also be used for this project once we get to the first public information meeting (PIM).

Chad – CDM Smith has been performing technical studies for a while now – wetlands, traffic, etc.

Mark – all wetlands are delineated, traffic data collected and is being evaluated. Bridge studies are about 90% complete - Some of the decisions made for the bridges will have a significate impact on the rest of the project.

Chad – planned agency coordination – would like to send an official letter notifying of the PEL study and requesting comments on the P&N. How do project goals fit into decisions that the agencies make? Can we rely on goals as part of the decision making process?

Christopher (USACE) – With regards to the accessibly of the upstream Cooper. If the current bridges aren't going to work, then the P&N can be revised to include navigation improvements.

Joy – The two large bridges are \$1.5 billion bridges. They are not really set up to be easily widened. Retrofitting would not improve the seismic resiliency of the original structure – would be damaging to the state if these were to be damaged by an earthquake. Studies will likely push us towards supplemental bridges and/or constructing new bridges. If there were an earthquake, seismic retrofit will likely keep existing users from being killed, but the bridge would not be guaranteed safe for future traffic.

Mark – Unlikely we can bring existing bridges to the current standard. Reached out to other states with similar seismic standards – have gotten many different responses.

Christopher (USACE) – P&N would still work with the discussion above consider these factors.

Shane (FHWA) – Clarified the distinction between the P&N and supporting goals. Is the goal a driver of the project? If so, then it needs to be part the P&N. Preferred alternative can meet the primary purpose and none of the goals. If seismic is required then it should be part of the P&N.

Joy – Seismic is not required when widening, but we want to look at the bridges from a cost benefit standpoint.

Shane (FHWA) – If the PEL shows that the bridges have to be replaced, then the seismic would probably then become a driver of the project. Goals allow the P&N statement to stay simplified.

Joy – interstate route is a critical roadway. Seismic concerns complicate maintaining the mobility. A lot congestion issues are due to the high truck volume in this area (port mobility).

Steve (USACE) – Sees the PEL as a starting point and we can look at the benefits and deficiencies during the NEPA stage. Appears to be a great process.

Shane (FHWA) – PEL purpose is to streamline the NEPA process. Includes more than just a feasibility study. Formalizes coordination points which allows you to take credit of the PEL work during the NEPA phase. If P&N changes than it will need to be re-evaluated at NEPA, but if not then it's already been addressed.

Chad – Formal concurrence points required with FHWA, but not with other agencies. But we do WANT agency input during this process. Address agency questions now and then the P&N will be more solid once the NEPA stage starts.

Shane (FHWA) – Formal consultation points for the agencies, but not concurrence.

Steve (USACE) – it will be helpful to go ahead and incudes the 404 and Section 10 information at this stage, so it's included in the alternatives analysis.

Chad – would like to be flexible as we move through the process and can hold multiple meetings with the ACE group if needed.

Cindy (NOAA) – Making sure that we are aware that increasing the bridge height will increase the size and number of vessels that can move upstream. Would need to include a detailed analysis of the indirect and cumulative impacts to EFH and sturgeon habitats.

Susan (SCDNR) – No comments on the process at this point.

Blair (OCRM) – No questions on the process at this time.

Chris (CZC) – No comments at this time.

Alya (EPA) – No comments at this time.

Chad – need to reach out to Coast Guard (not on the phone)

Joe (SHPO) – No comments at this time. Would need to see proposed footprint before knowing what kind of impact there would be.

ACE MEETING | 1/09/20

PROJECT SUMMARY

The South Carolina Department of Transportation (SCDOT), in cooperation with the Federal Highway Administration (FHWA), is evaluating the existing and future demands for the I-526 corridor from Paul Cantrell Boulevard in West Ashley to US Highway 17 (US 17) in Mount Pleasant. Two separate projects have been identified within the I-526 Lowcountry Corridor. The I-526 Lowcountry Corridor WEST (I-526 LCC WEST) project extends on I-526 from Paul Cantrell Boulevard to Virginia Avenue in North Charleston. This project, I-526 Lowcountry Corridor EAST (I-526 LCC EAST), extends from the eastern terminus of the I-526 LCC WEST project (Virginia Avenue) to US 17 in Mount Pleasant.

The I-526 LCC EAST project would address current and projected congestion and operational issues along this 9.9 mile segment of I-526. The project consists of two major river crossings that include the Don Holt Bridge (over the Cooper River) and the James

B. Edwards Bridge (over the Wando River). The proposed study area is preliminary and may expand to include additional areas for staging, widening on the outside of the roadway, and/or new structures.

WHAT IS THE PLANNING AND ENVIRONMENT LINKAGES?

The Planning and Environment Linkages (PEL) program was developed by FHWA to assist the transportation decisionmakers by encouraging the incorporation of key elements that include environmental resources, community, and economic goals early in project planning and development phases. FHWA states that "Decisionmakers can then use and rely on planning analysis, studies, decisions, or other information developed in planning process for the project development and environmental review processes of transportation projects."

WHY A PEL?

Linking planning and NEPA is an integral part of the PEL process. A PEL study can lead to a seamless decision-making process that accomplishes the following:

- Minimizes duplication of effort
- Promotes efficient and cost-effective solutions and environmental stewardship
- Reduces delays in project implementation

It is not intended as a substitute for the NEPA process but as a way to streamline the NEPA process and focus project development.

Study recommendations will include early action improvements that may identify phasing program options for the implementation of recommended actions.

Major components of the PEL process includes:

- Identifying transportation needs
- Identifying and engaging stakeholders throughout the community
- Defining roles and responsibilities
- Developing purpose and need, goals, and performance measures
- Developing, evaluating, and screening conceptual alternatives
- Identifying planning-level environmental impacts and potential mitigation options
- Documenting the evaluation process
- Documenting and finalizing the PEL study

The PEL study will be prepared to meet the thresholds identified in FHWA *Planning and Environment Linkages Questionnaire* to 23 CFR 450, specifically 23 CFR § 450.212(b) and 450.318(b), so that it can be used to inform the NEPA process.

In order to meet these requirements, the PEL study shall be NEPA-like and will include the following thresholds:

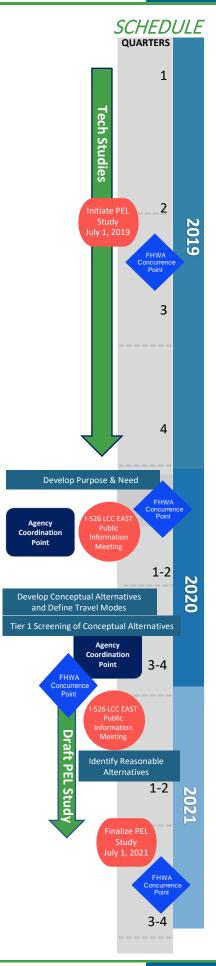

- Coordination with local, state, tribal, and federal agencies
- Public input and review of the PEL study, including opportunity for public/agency involvement in decision-making
- Document decisions in technical memorandum format including specific information such as dates, interested parties, decisions made, distribution list, etc.
- Adherence to and completion of the FHWA Planning and Environment Linkages Questionnaire that shall be included in the PEL study

WHAT IS THE PROJECT PURPOSE?

The main purpose of the project is to increase capacity and reduce congestion along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant. However, one of the objectives of the PEL is to receive input from the public, stakeholders, and federal and state agencies to determine the goals of the project and overall purpose and need.

The goals of the project could include:

- Coordinate with local plans
- Improve roadway infrastructure to accommodate increased traffic volumes
- Enhance mobility for people and goods through the corridor
- Improve modal interrelationships with area ports and transit
- Improve seismic resiliency

Agency Coordination Effort Meeting #1 January 9, 2020

Agenda

- Introductions
- Project Overview (WEST/EAST)
- I-526 LCC EAST Study Area
- What is a Planning and Environment Linkages (PEL) Study?
- Why is SCDOT Completing a PEL Study on I-526 LCC EAST?
- Draft Purpose and Need Discussion
- Schedule
- Next Steps

Introductions

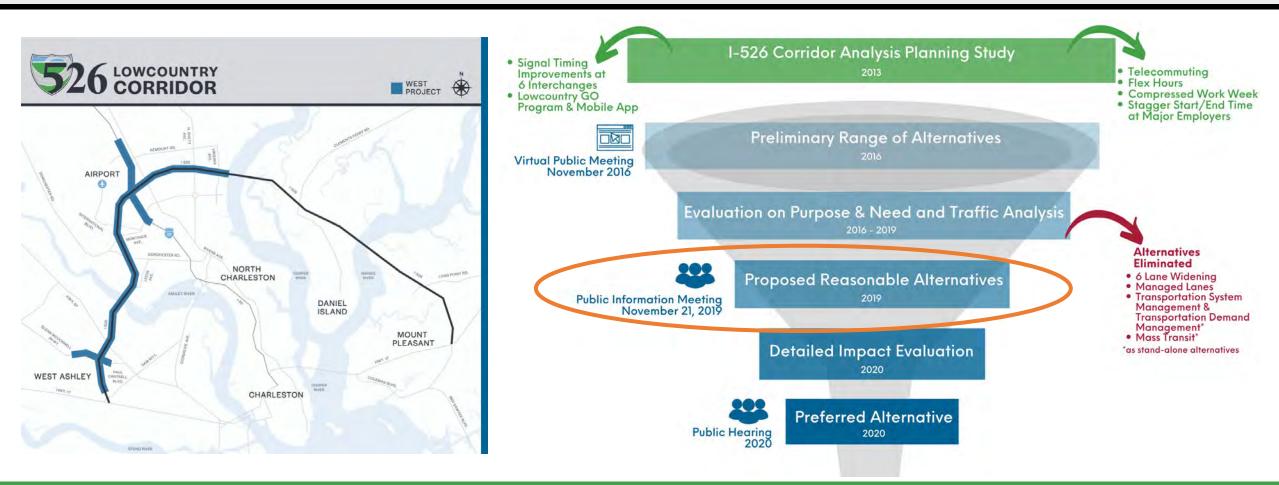

- Joy Riley, PE, SCDOT Project Manager
- Chad Long, SCDOT
- Mark Lester, PE, CDM Smith Project Manager
- Michael Belvin, CDM Smith

Project Overview – WEST

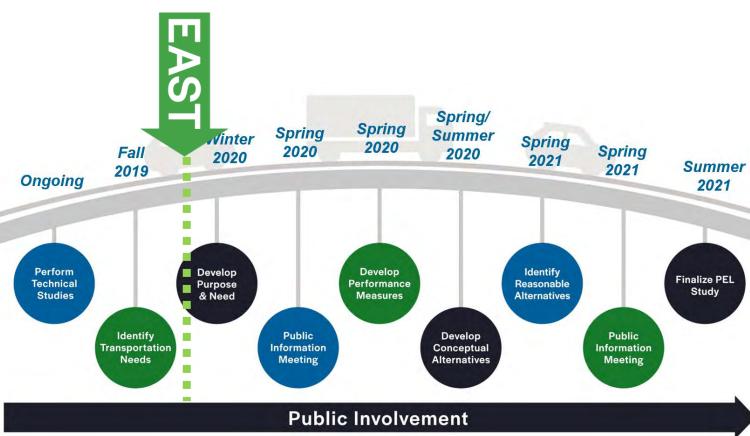

Project Overview – EAST

Study Area

I-526 LCC EAST Study Area

- I-526 from Virginia Avenue to US 17
- 10 miles total
- 5 miles elevated structure
- 2 major bridges
 - Don Holt Bridge over Cooper River
 - Wando River Bridges over Wando River navigational channel
- 5 interchanges

What is a PEL Study?

What is a PEL Study?

Planning & Environment Linkages Study

- Tool for creating efficiency in transportation project development
- Collaborative and integrated approach to decision-making
- Considers environment, community, and economy
- Assists with project delivery
- Gives flexibility to agencies

Benefits of the PEL Study

- Combines planning, engineering, and NEPA
- Minimizes duplication
- Promotes environmental stewardship
- Encourages early, meaningful, and productive public engagement
- Reduces delays in implementation
- Uses decisions and analysis to inform NEPA

PEL Study Process

- Identify transportation needs
- Develop purpose and need
- Develop performance measures
- Develop/screen conceptual alternatives
- Identify reasonable alternatives
- Public information meeting(s)
- Draft/Final PEL Study

526 Purpose and Need

Project Purpose

The purpose of the project is to **increase capacity** and **reduce congestion** along I-526

from Virginia Avenue in North Charleston to US

17 in Mount Pleasant.

ORAFT

Need for Project

Roadway Deficiency:

Over capacity facilities, inadequate shoulder widths, inadequate acceleration/deceleration ramp lengths, and loop ramp radii deficiencies

Mobility:

Traffic congestion along the corridor resulting from high traffic volumes and incidents

Project Goals

FHWA's Planning and Environment Linkages Questionnaire states: "Provide the purpose and need statement, or the corridor vision and <u>transportation goals</u> and objectives to realize that vision."

- Goals are not project needs or project purpose
- Goals provide guidance for alternatives development and evaluation

Ex: "Maximize the use of existing infrastructure" or "Avoid and minimize impacts to environmental and cultural resources"

Project Goals

- Coordinate with local plans and project
- Improve roadway infrastructure to accommodate increased traffic volumes
- Enhance mobility for people and goods through the corridor
- Improve modal interrelationships with area ports and transit
- Improve accessibility of the Cooper River upstream of the Don Holt Bridge
- Improve seismic resiliency

Project Goals

The main purpose of the project is to increase capacity and reduce congestion along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant.

526 LOWCOUNTRY CORRIDOR

Other goals of this project could include:

Improve Roadway Deficiency

Inadequate shoulder widths, inadequate acceleration /deceleration ramp lengths, loop ramp radii definciencies

1 2 3 Roads Bridges Interchanges

Enhance Mobility

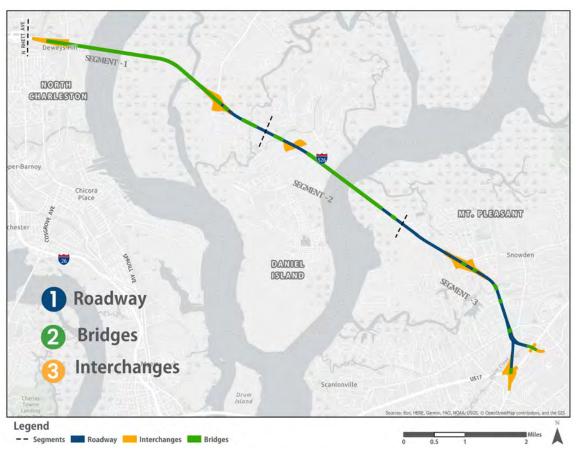

How well can you move people through? Truck only lane, HOV/HOT lanes

Modal Interrelationships

Serve to complement airports, ports, rail, commuter transit

Roadway Improvement Needs

- Insufficient capacity
- Deficiencies in median width/inside shoulder width
- Deficiencies in vertical alignment at Cooper and Wando Rivers
 - insufficient length of vertical curve
- Deficiencies in vertical clearance at structure over roadways

Bridge Improvement Needs

Cooper River Bridge – Built 1989

- Existing Conditions
 - Twin parallel structures, 88 ft. wide, 2 miles long
 - 155 ft. vertical clearance
 - Designed/constructed for 2 lanes (each direction)

Needs

- Insufficient capacity
- Requires seismic retrofit
- Inadequate shoulders
- Insufficient vertical clearance
- Unplanned maintenance

Bridge Improvement Needs

2

Wando River Bridges – Built 1989

- Existing Conditions
 - Twin parallel structures, 44 ft. wide per bridge, 1.5 miles long
 - 138 ft. vertical clearance
 - Designed/constructed for 2 lanes (each direction)
- Needs
 - Insufficient capacity
 - Inadequate shoulders
 - Insufficient seismic design

Bridge Improvement Needs

2

I-526 Grade Separation Bridges

- Over Wakendaw Road (C-4436)
- Over Mathis Ferry Road (S-56)
- Over US 17/701
- Over Long Point Road (S-97)

Needs: Insufficient capacity, inadequate shoulders, and insufficient seismic design

Bridge Improvement Needs

I-526 Marsh Bridges

- Over Tidal Creek near Clements Ferry Road Interchange
- Over Beresford Creek
- Over Tributary to Beresford Creek
- Over Tidal Creek between Wando River & Long Point Road
- Over Tributary to Hobcaw Creek
- Over Hobcaw Creek

Needs: Insufficient capacity and inadequate shoulders

Interchange Improvement Needs

Five Interchanges

- I-526/Virginia Avenue
- I-526/Clements Ferry Road
- I-526/River Landing Drive/Seven Farms Drive
- I-526/Long Point Road
- I-526/US 17

Needs: Insufficient ramp capacity and geometric deficiencies

Giovanni Cosentino	CDM Smith

MEETING AGENDA

- Introductions
- Review PEL Study Area and PEL Milestones
- Review Purpose and Need
- Overview of Concepts Development
- Overview of Alternatives Analysis Process
- Next Steps

Will McGoldrick provided roll call of the attendees and introduced Mark Lester with CDM Smith as the project manager for the I-526 EAST Team.

Mark Lester introduced the project team and presented on the overall project, Purpose and Need, development of concepts and the alternative analysis. Mark provided the next steps and major milestones to be completed in the coming months. A copy of the presentation is attached as information.

DISCUSSION

SCDOT-Provided brief summary stating that the 526 Lowcountry Corridor EAST project is currently in the PEL process and while the project will eventually enter into the NEPA process, feedback from this group during this stage will greatly benefit the project. Asked for agency comments, feedback, or questions.

USFWS- Noted the black rail, gopher frog, and tri-colored bat. There is existing development along the corridor and after reviewing the database there are no threatened and endangered species of concern at this time. The following link is provided for reference https://www.fws.gov/southeast/pdf/fact-sheet/south-carolina-species-list-by-county.pdf

SCDOT-Noted that the previous administration did not focus on areas such as climate change and sustainability. However, the new administration will be placing more emphasis on these areas going forward. Questioned whether the project team addressed these topics in their study.

CDM – Noted that the project team has not specifically looked at climate change as part of the alternative analysis but would be looking to FHWA for guidance as the project further develops. Also stated that the project team is starting to look at climate change and sustainability from a holistic perspective and asked that if there is any additional guidance on these areas that it be shared with the group.

FHWA-Indicated the final report will need to have a general analysis with regards to Environmental Justice (EJ). At a minimum if there could be impacts. A more in-depth evaluation will be done once the project transitions into NEPA. Also noted the highway bill is up for re-authorization and may contain additional guidance on topics such as environmental justice, climate change, and sustainability. These guidelines may include potential bridge heights to account for future climatic conditions.

USACE-Inquired if the project team worked with the US Coast Guard to discuss bridge work along the corridor.

CDM -A navigation study has not been completed yet but will be part of the NEPA process. However, vessel usage along these waterways has been captured and is in the bridge reports. Based on the results of the bridge report, there is no need to replace the Wando bridge at its current height and would recommend lowering the bridge.

CDM/SCDOT/FHWA-This is the first presentation of the project with this level of detail as it relates to the alternatives analysis. These preliminary results will not be shared with the public until October. Agencies asked to not share this information outside their agency until after public has an opportunity to see and comment on the material.

SCDOT-Please send any additional comments or questions to Will McGoldrick and/or Shane Belcher (FHWA).

ACTION ITEMS

- Protected species were evaluated during the environmental review for the study area and is
 documented in a technical memorandum. A brief summary will be included in the PEL study
 report. In addition, the project team will include a discussion of resources that need further
 evaluation during a future NEPA phase in the PEL study report.
- FHWA to coordinate with CDM Smith on updated requirements within the new infrastructure bill, if needed.
- EJ communities were evaluated using U.S. Census data during the environmental review for the study area and is documented in a technical memorandum. A brief summary will be included in the PEL study report.

I-526 LCC EAST Status Update
Agency Coordination Meeting #2
July 8, 2021

Meeting Objectives

- 1. Introductions
- 2. Review PEL Study Area and PEL Milestones
- 3. Review Purpose and Need
- 4. Overview of Concepts Development
- 5. Overview of Alternatives Analysis Process
- 6. Next Steps

Introductions

- Mark Lester, PE, CDM Smith Project Manager
- Jenny Humphreys, AICP
- Krista Goodin, AICP
- Michael Belvin
- Gio Cosentino

I-526 LCC EAST Study Area

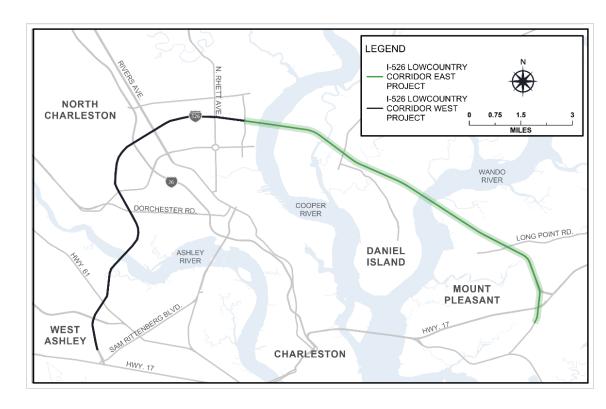

Virginia Avenue to US 17

What is a PEL?

Tool for creating efficiency in transportation development

Considers environment, community & economy

Collaborative & integrated approach to decision-making

What are the Benefits of including a PEL Study in the project development process?

Who Participates?

PEL & NEPA Process

PUBLIC & AGENCY INVOLVEMENT

Planning & Environmental Linkages Study (PEL)

1.5 - 2.5

Years

- Planning studies
- Existing conditions analysis
- Future forecasts
- Study goals
- Purpose & need
- Range of alternatives and screened reasonable alternatives
- Cost estimates and Implementation plan
- Level of NEPA analysis: Categorical Exclusion, Environmental Assessment, or Environmental Impact Statement

NEPA

1 Ye

- Confirm/refine purpose & need
- Detailed environmental studies
- Refine alternatives
- Explore mitigation and commitments
- Prepare decision document

Project Implementation

- Final design
- Right-of-way acquisition
- Permitting
- Mitigation and commitments
- Construction

Maintenance Operations

 Maintenance of roadway and right-of-way

PEL Study Completed Milestones

- PEL Initiation (FHWA Concurrence)
 March 23, 2020
- MetroQuest Survey
 May 14 August 15, 2020
- Public Information Meeting (Online) July 15 - August 15, 2020
- Purpose & Need (FHWA Concurrence)
 February 18, 2021
- Concepts Development & Preliminary Screening April/May 2021

PEL Study Upcoming Milestones

- Combined Stakeholder Meeting July 29, 2021 (WEST focused)
- Combined Stakeholder Meeting September 2021 (EAST focused)
- Public Information Meeting October 2021
- FHWA PEL Questionnaire January 2022
- PEL Report January 2022

Concepts Development & Alternatives Analysis

Draft Purpose & Need

Draft Purpose

Draft Purpose & Need

The purpose for transportation improvements along this corridor is to

improve travel time reliability

& reduce congestion

along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant

Mobility Roadway Deficiencies Shoulder Over **Draft Need** Widths Capacity Traffic congestion from high traffic On & **Tightly** volumes & Off Ramp Curved Lengths Ramps incidents

Study Goals

- Compatibility: Align with local land use plans
- Demand: Improve roadway infrastructure to accommodate increased traffic volumes
- Safety: Reduce congestion-related incidents throughout the corridor
- Multimodal: Enhance mobility for people and goods throughout the corridor

Study Goals, cont'd

- Seismic: Improve seismic resiliency of the infrastructure
- Technology: Accommodate future transportation technologies, including vehicle technologies, communications technologies, system monitoring systems, driver information and traffic operations technologies
- Connectivity: Improve connections with area ports, rail intermodal facilities, and transit assets

Concept Screening Process

Management & Operations
(TSMO)

Managed Lanes

Operational Elements

Multimodal Improvements

Infrastructure Improvements

New Location Alignment

Mainline Improvements

1 or 2 additional lanes

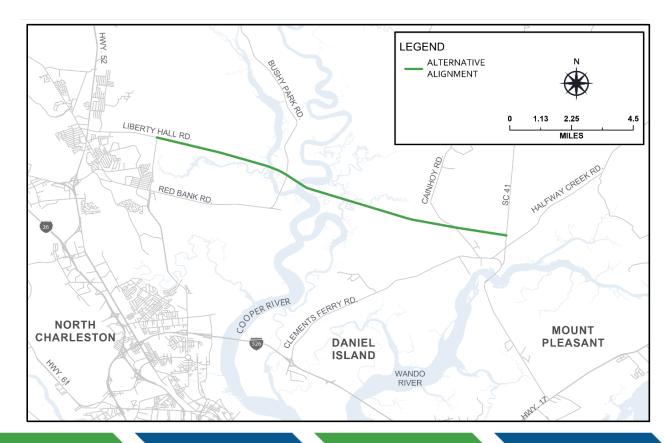

Interchange Improvements

New Location Alignment Route

- Visionary project in CHATS 2040 LRTP
- 4-lane parallel corridor
- 2 lanes in each direction

Study Corridor Division Conceptual Design Options

Level 2 Screening Conceptual
Design
Alternatives

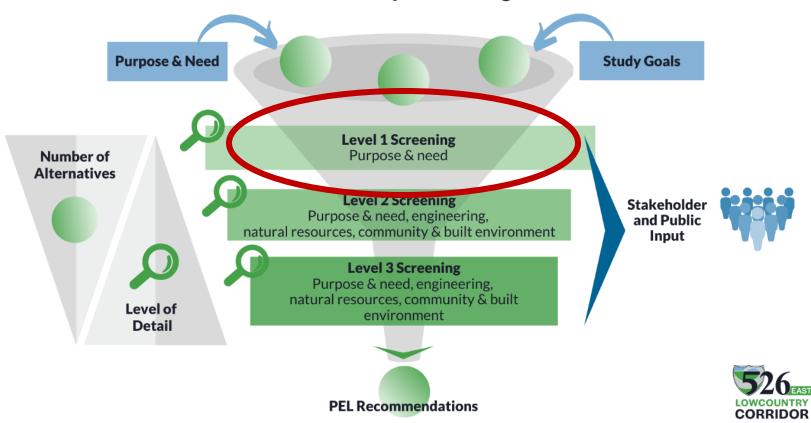

Level 3
Screening

Level 1 Screening

Alternative Concept Screening Process

Level 1 Screening Criteria

- Improve congestion (Quantitative)
 - Performance Evaluation Methodology-CHATS Interim Regional TDM
 - Improved Level of Service and Volume to Capacity Ratio
 - Reduced Delay and Improved Travel Speed
- Improve roadway deficiencies (Qualitative)
 - Object the concept have the potential to meet SCDOT roadway design standards?

Level 1 Screening Results

- Concepts Carried Forward
 - No-Build
 - 2 additional lanes in each direction
- Supplemental Options Carried Forward
 - Interchange Improvements
 - Dedicated truck ramps to port (additional facility)
 - TSMO Concepts
- Eliminated
 - New location alignment route
 - 1 additional lane in each direction

Preliminary Concept Development

Level 1 Screening Study Corridor Division Conceptual Design Options

Level 2 Screening Conceptual Design Alternatives

Level 3 Screening

Alternative Concept Screening Process

Level 3 Screening Categories

- Purpose and Need (traffic performance, travel time analysis)
- Engineering (compatible with local projects, seismic resiliency, ports & transit access, constructability)
- Natural Resources (aquatic resources)
- Community and the Built Environment (relocations, parks, cultural sites)

I-526 EAST Traffic Performance

- Use microsimulation modeling
- Traffic demand between origins and destinations
 - 8-lane conceptual alternative, 2050
 - Eastbound and Westbound
- AM/PM Peak Period Speeds along corridor
 - No-Build alternative, 2050
 - 8-lane conceptual alternative, 2050
 - Eastbound and Westbound

Travel Time Analysis

- Travel Time Index (TTI) = average peak-period travel time compared to free flow travel time
- Expressed as a ratio
- A reduction in TTI (negative change) is an improvement
- TTI < 1.10 is considered uncongested
- TTI = 1.10 1.50 is considered **moderate** congestion
- TTI = 1.50 2.00 is considered **significant** congestion
- TTI > 2.00 is considered **severe** congestion

TTI Examples

Example: TTI value of 1.3 = average rush hour travel times are 30% longer than free-flow travel times such as 10pm and is considered moderate congestion

Example:

Common Origin-Destination Path	2050 No Build Average Peak- Hour TTI	2050 Build Average Peak- Hour TTI	2050 TTI Change
Road A to Road B	1.30	1.20	-0.10
Road A to Road C	1.40	1.57	+0.17

TTI Changes – I-526 Eastbound

Common Origin-Destination Path	2050 No-Build Average Peak-Hour TTI (Travel Time in mins.)	2050 Build Average Peak- Hour TTI (Travel Time in mins.)	2050 TTI Change
I-526 west of North Rhett Avenue to US 17 South	5.28 (49)	1.83 (17)	-3.44
North Rhett Avenue to Clements Ferry Road Northbound	6.11 (15)	1.63 (5)	-4.47
North Rhett Avenue to Long Point Road	4.39 (27)	1.92 (13)	-2.47
Clements Ferry Road to US 17 North	3.62 (18)	1.90 (9)	-1.73
River Landing Drive to US 17 South	3.48 (15)	1.82 (8)	-1.66
Long Point Road to US 17 North	2.50(3)	1.23 (2)	-1.27

TTI Changes – I-526 Westbound

Common Origin-Destination Path	2050 No-Build Average Peak-Hour TTI (Travel Time in mins.)	2050 Build Average Peak- Hour TTI (Travel Time in mins.)	2050 TTI Change
US 17 North to I-526 west of North Rhett Avenue	6.05 (58)	2.19 (21)	-3.86
US 17 North to Seven Farms Drive	11.85 (54)	1.69 (8)	-10.17
Long Point Road to Clements Ferry Road	10.73 (42)	1.88 (8)	-8.85
Long Point Road to I-526 west of North Rhett Avenue	5.46 (43)	2.36 (19)	-3.10
Seven Farms Drive to North Rhett Avenue	2.61 (9)	2.63 (9)	+0.02
Clements Ferry Road to I-526 west of North Rhett Avenue	2.91 (10)	3.09 (11)	+0.18

Level 3 Screening Results

- Alternative 3 and Alternative 6 were eliminated for the following reason:
 - Impact to a Cultural Resource (African American Cemetery)

Alternatives Recommended to be Carried Forward to NEPA

- No-build Alternative
- Five build alternatives:
 - Retain Don Holt Bridge, add capacity north or south (Alternative 1 and Alternative 2)
 - Replace both bridges, add capacity north, south, or symmetrically (Alternatives 4, 5, and 7)

Conceptual Design Alternatives

Alternative	Design Options	Capacity Option
Alternative 1	1-C 2-J 3-A	Retain Don Holt/add 4-lane bridge north
Alternative 1		Staged symmetrical replacement of Wando
Alternative 2	1-D 2-J 3-A	Retain Don Holt/add 4-lane bridge <mark>south</mark>
Alternative 2	T-D Z-J 2-A	Staged symmetrical replacement of Wando
Altomotive 4	1-F 2-F 3-A	Replace Don Holt with 8-lane bridge north
Alternative 4		Replace Wando with 8-lane bridge north
Altomotive F	1 11 2 11 2 4	Add 4-lane bridge <mark>north</mark> / <mark>replace</mark> Don Holt in place
Alternative 5	1-H 2-H 3-A	Add 4-lane bridge north/remove Wando/add 4-lane bridge in place
Alternative 7	1-H 2-J 3-A	Add 4-lane bridge north/replace Don Holt in place
		Staged symmetrical replacement of Wando

Preliminary Concept Development

Level 1 Screening Study Corridor Division Conceptual Design Options

Level 2 Screening Conceptual Design Alternatives

Supplemental Options to be Carried Forward to NEPA

- Interchange Improvements
 - Dedicated truck ramps to the Wando Welch Port Terminal
- TSMO Options
 - Shoulder lane use
 - Traveler information
 - Incident management
 - Road weather management
 - Work zone management

- Enhance lane markings
- Accommodation of connected and autonomous vehicles
- Variable speed limits (VSL)
- Park-and-ride lots

PEL Study Next Steps

- FHWA coordination on concepts development and alternatives screening process
- Stakeholder and public input on reasonable alternatives
- Study recommendations phasing, NEPA class of action, funding opportunities, unresolved issues
- FHWA coordination on PEL FHWA Questionnaire and PEL Study Report

PEL Study Upcoming Milestones

- Alternatives and Screening FHWA Concurrence July 2021
- Combined Stakeholder Meeting July 29, 2021 (West focused)
- Combined Stakeholder Meeting September 2021 (East focused)
- Public Information Meeting October 2021
- FHWA PEL Questionnaire January 2022
- PEL Report January 2022

1.0 Introduction

1.1 PURPOSE OF THE PUBLIC INVOLVEMENT PLAN

The I-526 Lowcountry Corridor EAST (I-526 LCC EAST) Public Involvement Plan (PIP) details strategies and tools to be used to ensure that members of the public receive key information about the project and have opportunities to provide meaningful input on decisions that will affect their community. While the I-526 LCC EAST is currently in the planning phase, undergoing a Planning and Environmental Linkages study, the PIP was developed to be consistent with public involvement requirements under the National Environmental Policy Act (NEPA), Title VI of the Civil Rights Act, Executive Order 12898 – Environmental Justice, and other federal regulations. The PIP outlines methods to engage all segments of the public and other stakeholders in and around the proposed project area. The PIP is a living document that can be adapted to incorporate new or more successful approaches as the project evolves. Community input is critical to the success of any project, and the South Carolina Department of Transportation (SCDOT) is committed to providing meaningful public involvement opportunities throughout the project development process (Figure 1.1).

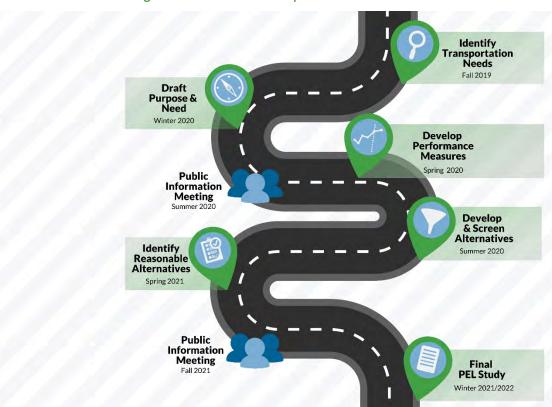

Figure 1.1 I-526 Lowcountry Corridor EAST PEL Process

This page intentionally left blank.

2.0 OVERVIEW

2.1 Overview of the I-526 Lowcountry Corridor EAST Project

I-526 serves as a 23-mile-long, east-west bypass of the Charleston metropolitan area and has been identified by SCDOT as one of the state's most congested interstate highways. Specific problems within the I-526 corridor include, but are not limited to, the growing demand for capacity, congestion, and design deficiencies.

SCDOT is conducting a Planning & Environmental Linkages (PEL) Study for I-526 LCC EAST, which extends from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The PEL study will identify existing and projected transportation issues within the corridor through public and stakeholder engagement.

The results of the study will help establish a vision for the corridor that will guide future transportation decision-making. This resulting information of the PEL study will be carried into the next phase of project development which is the National Environmental Policy Act (NEPA) process. After the needs are better understood in this corridor, and potential improvements identified, the next steps, including potential phasing and project opportunities, may be developed.

Figure 2.1: I-526 Lowcountry Corridor Study Area

2.2 COORDINATED OUTREACH EFFORTS

SCDOT has implemented protocols to avoid confusion of this project with other projects occurring in the Charleston region.

SCDOT is in the process of completing an Environmental Impact Statement (EIS) for the I-526 Lowcountry Corridor WEST (I-526 LCC WEST). A separate, but distinct project, the I-526 LCC WEST extends from south of Paul Cantrell Boulevard (Exit 11) in West Ashley to Virginia Avenue (Figure 2.1) in North Charleston.

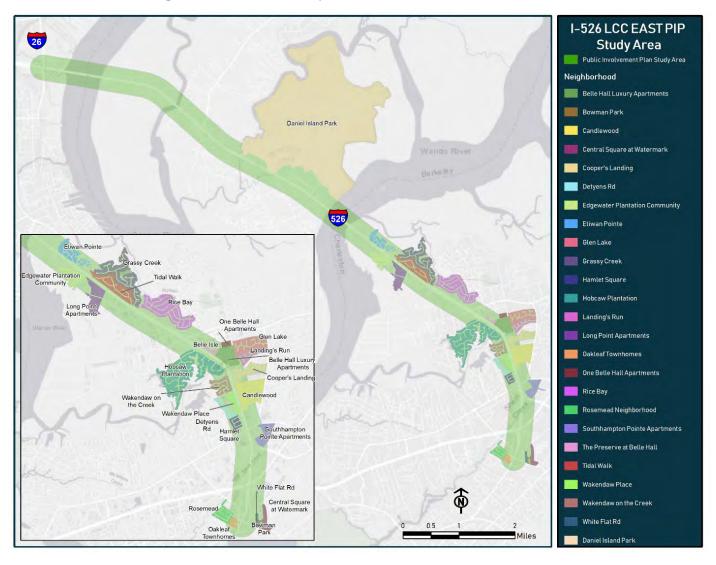

In addition, the Mark Clark Extension project will be going through the NEPA process at the same time. The LCC public engagement team will partner with SCDOT to align messaging across the three projects to maintain the overarching goals of this PIP and those established for the I-526 LCC WEST and the Mark Clark Extension project.

2.3 Public Involvement Outreach Boundary

Although changes to a transportation network can be far-reaching, impacting mobility and travel patterns throughout a region, a reasonable boundary is needed to provide guidance for public

involvement and outreach efforts. To be consistent with the WEST project, a 1,000-foot buffer from the roadway centerline will be used as the study area boundary for the EAST project. Outreach efforts will follow neighborhood boundaries of the communities that are adjacent to the 1,000-foot project study area boundary.

Figure 2.2: I-526 Lowcountry Corridor 1,000-Foot Buffer

3.0 DEVELOPMENT OF THE PUBLIC INVOLVEMENT PLAN

This PIP is designed to provide a clear description of how SCDOT will: solicit input; develop two-way communication with communities, local citizens, and other interested parties; and document public opinions regarding the I-526 LCC EAST.

While the I-526 LCC EAST project is still in the planning phases, public engagement will be conducted as to follow all NEPA requirements to ensure a seamless transition to an environmental review. As required by SAFTEA-LU Section 6002, the public will be provided with opportunities to provide specific input on the purpose and need statements, as well as the range of alternatives. A project-specific plan for public input has been developed to outline the opportunities for the public to be involved in the project development process. Additionally, this plan describes strategies for encouraging public input, as required by NEPA.

3.1 Branding

Project branding is critical to ensure that the I-526 Lowcountry Corridor projects' identities are separate from myriad efforts also underway in the Berkeley-Charleston-Dorchester region. The logo developed for the I-526 Lowcountry Corridor will be the cornerstone of the project's branding and the 'look and feel' for both the EAST and WEST projects. Both project teams will use the I-526 Lowcountry Corridor logo for common public facing materials, denoting EAST or WEST for those items that are distinct.

2020 Update: Project business cards were created for the project manager for the overarching LCC project. These include the various communications method for the project in a small, easy-to-carry format.

SCE EAST PROJECT 526Corridor @526Corridor SCDOT Project Manager Joy Riley, PE, PMP, CPM, DBIA LOWCOUNTRY 5627 Rivers Avenue Gas Lite Square CORRIDOR DANIEL North Charleston, SC 29406 866.632.5262 www.526LowcountryCorridor.com info@526LowcountryCorridor.com CHARLESTON

Figure 3.1 Project Business Cards

3.2 INTERESTED PARTIES

This list is not all-inclusive—as interested parties are identified, they are added to the list. Interested parties may opt-in to receive project updates online or at public meetings. This list is inclusive of interested parties for both the I-526 LCC EAST and WEST projects.

3.3 KEY MESSAGES

There are several key messages that will be emphasized and communicated to the public throughout the study. Key messaging currently approved by SCDOT includes the following:

- The I-526 LCC EAST is still in the planning phases. A Planning and Environmental Linkages (PEL) study is being prepared for the I-526 LCC EAST.
 - As a planning study, we are currently defining the transportation challenges and range of possible alternatives. As the project advances into the environmental process, these concepts will be further refined.
 - Due to the major river crossings along the I-526 LCC EAST corridor, identifying feasible project alternatives and cost estimates are challenging without extensive planning efforts.
 - Because this corridor serves as a major economic connector in the lowcountry, linking the goods that flow to and from South Carolina's busiest port terminal with Interstate 26 and other integral components of the state's freight network, these factors must be taken into consideration with any planning efforts.
- The I-526 LCC EAST PEL study may result in the identification of multiple potential projects, such as intersection improvements or capacity improvements along the corridor, that could be phased and prioritized for implementation.
- The project team looked at and continues to evaluate a series of strategies that focus on operational improvements without the need for expansion, known as Transportation Systems Management and Operations (TSMO) strategies.

Additional key messages are intended to support the goals of the PIP:

- The study is an objective process to help determine what actions, if any, are needed to best serve the transportation needs of the area.
- Before a major highway project can be constructed, FHWA requires the completion of an environmental study. The PEL study is a precursor to an environmental study.
- SCDOT encourages the public's participation and will actively seek out and engage all who may be affected.
- The public has a voice in the decision-making process, and SCDOT will listen to and consider all
 input. While this process does not include a public vote, all comments received are reviewed
 and considered before the final report is published.

3.3.1 Key Themes

Key themes for the I-526 LCC EAST project were identified through work on the I-526 LCC WEST project. The following key themes are from the <u>I-526 Lowcountry Corridor (WEST) Public Involvement Plan (PIP) Update</u>, provided to the EAST team from the WEST team.

3.3.1.1 Regionality

- I-526 LCC WEST, roughly 11.4 miles of existing I-526 between Paul Cantrell Boulevard in West
 Ashley and Virginia Avenue in North Charleston, and 3.5 miles on I-26, and cannot be completed
 in a vacuum. Improvements considered for this corridor should be reviewed on a regional basis
 for performance on adjacent roadways and intersections.
- A regional interstate congestion management plan is being developed for I-26 and I-526 in the greater Charleston region.
 - This interstate congestion management plan is evaluating travel demand management and operational strategies to reduce congestion in the entire region, including "managed lanes" or high-occupancy vehicle (HOV) and high-occupancy toll (HOT) options, which could be critical in managing regional traffic long term. In addition, multimodal transportation options have been studied, such as carpooling, ride-sharing, and expanded transit opportunities.
 - It's clear that this interstate congestion management plan will be crucial in determining the best path forward for long-range improvements to I-26 and I-526 in the region. The results of this study will provide a phased regional strategy for the next 30 years.

3.3.1.2 Getting it Right

- Tens of thousands of Lowcountry residents drive on one of South Carolina's most congested stretches of highway each day. Relief, in the form of additional lanes, upgraded interchanges, augmented safety features and more, is needed.
- The improvements for this corridor should be such that they will last far into the future, at least until 2050.
- The scope of the I-526 LCC WEST project is more than 11 miles in length, and its potential impacts will need to be carefully reviewed and evaluated to avoid, minimize, and mitigate impacts to both the human and natural environment.

3.3.1.3 Truck Traffic

Concerns with trucks on the I-526 LCC EAST are prevalent. Alternative truck/freight
routes/options are being evaluated as part of this study. Adding a travel lane for trucks only was
evaluated as a Transportation Systems Management and Operations (TSMO) strategy.

3.3.1.4 Noise Impacts

Noise concerns were expressed in both public information meetings. Many comments noted
that the project needs to incorporate noise mitigation. As a planning study, we are currently
defining the transportation challenges and range of possible alternatives. As the project
advances into the environmental process, these concepts will be further refined. Having a
refined design would allow us to model the potential noise more accurately and explore various
noise reduction strategies.

3.3.1.5 Neighborhood Impacts and Right of Way

• Impact concerns were expressed in both public information meetings. As a planning study, we only have design concepts with conservatively established right-of-way limits. When the project advances into the federal environmental review process, NEPA, these concepts will be further refined, and more detailed designs will be developed. More detailed designs will help to better determine, avoid, and minimize possible right-of-way impacts.

3.3.1.6 What happens next?

The I-526 LCC EAST is a planning-level study that provides recommended projects and costs for
consideration in SCDOT's future statewide transportation plans. If and when projects are
funded, they would advance to the environmental phase, NEPA. During that process, the range
of alternatives would be narrowed down to a preferred alternative based on additional studies,
design, and public input. This is when noise and right-of-way impacts will be analyzed in detail.

3.4 DEMOGRAPHICS

The I-526 LCC EAST team conducted an initial site visit on June 6, 2018 to identify communities, churches, recreational facilities, medical centers, schools, and businesses located within the project's 1,000-foot buffer area which spans three municipalities: North Charleston, City of Charleston (Daniel Island), and Mount Pleasant. During the site visit, the team also identified potential environmental justice communities.

Since that time, the project boundaries for the I-526 LCC EAST and WEST have changed. After initial studies, it was determined that the interchange at North Rhett Avenue/Virginia Avenue should move forward in the I-526 LCC WEST project due to the congestion and safety concerns in that area. The I-526 LCC EAST's western termini was moved from Rivers Avenue to Virginia Avenue. Therefore, no EJ communities remain within the I-526 LCC EAST study area.

The team originally used data from the U.S. Census (2018) that comprises the study area, from Charleston (Daniel Island) to Mount Pleasant, to identify demographics for each area along the project

corridor (**Table 3.1**). This information was updated with 2020 data in January 2022 (**Table 3.2**). The data shows there are higher populations of low-income and minority residents located in North Charleston than in the Mount Pleasant/City of Charleston areas. Knowing this, the team will use multiple outreach tools as appropriate to engage the various communities to ensure that all stakeholders are notified of status updates and encouraged to participate throughout project development.

Table 3.1: Initial Demographic Information for the I-526 LCC EAST Project

	Daniel Island	Mount Pleasant
Total Population	9,951	27,115
African American	1,272	2,477
Hispanic	156	905
Avg. Median	\$127,716.33	\$82,699.50
Income	\$127,710.55	\$62,099.30

4.0 GOALS AND STRATEGIES

OF THE PUBLIC INVOLVEMENT PLAN

4.1 GOALS AND STRATEGIES

Because public involvement is a critical component of the transportation planning process, engaging the public at the very early stages will help ensure decisions are made in consideration of, and to benefit, public needs and preferences while developing potential alternatives for the proposed project area. The public involvement effort is intended to establish and maintain communication between the community and SCDOT regarding issues and concerns surrounding the I-526 LCC EAST project. The public involvement goals and associated strategies are identified below.

Figure 4.1 I-526 LCC EAST Public Involvement Goals and Strategies

Trust with the community

About the project, the PEL process and the overall project development process

Concerns, issues and potential impacts of the project

Provide transparency through timely, complete information

Use high-touch techniques such as public meetings to provide direct connections with the project team

Establish messaging protocols & coordination across the team for communications & meetings

Create easy-tounderstand, visually appealing, unbiased, and "on brand" materials

Use low-touch techniques (social media, email blasts, virtual meetings, newsletters, HOA emails, etc.) for digitally friendly populations

Track public input as it relates to the decisionmaking process electronically

Gather feedback from stakeholders through already-established stakeholder meetings for I-526 LCC WEST

Provide easy opportunities for the public to provide comment such as online tools and forms

This page intentionally left blank.

5.0 Public Outreach Tools

SCDOT uses numerous and varied techniques for public outreach. Listed below are the methods SCDOT is currently leveraging for the I-526 Lowcountry Corridor. It will be necessary for all communication, regardless of purpose or methodology, always complies with the established messaging for the project. All materials used in the public involvement effort will be approved by SCDOT before they are disseminated.

5.1 I-526 LOWCOUNTRY CORRIDOR WEBSITE

A project website, www.526lowcountrycorridor.com, is used to disseminate project information, provide a schedule of events and studies, and solicit public input. (Figure 5.1) The site includes English and Spanish materials and includes features such as an online feedback form, a location for media information, and technical documents and reports. The website will continue to be updated on a regular basis with the intent of providing real-time project information for the community as new information becomes available.

In May 2019, a redesigned project website was released to the public. The revised project website includes project-related information for both I-526 LCC EAST and I-526 LCC WEST, a separate and distinct project. This new website utilizes Google translate, so all web copy is available in a variety of languages, to include English and Spanish among others. This site is responsive in design, in consideration of the public accessing the site using mobile devices, especially those in traditionally underrepresented communities.

Figure 5.1 Project Website Home Page

in the Lowcountry

Retrieved March 5, 2019 from www.526lowcountrycorridor.com

Website Performance Metrics and Highlights (through May 2019):

- Total Sessions: 1,474
- Most (76.5%) traffic was typing in the website URL directly
- Most users (80.5%) were desktop users (not the national trend)
- The most visited page was the Stay Informed page (2,451 pageviews)

2022 Update: Website Performance Metrics and Highlights (through December 2021):

I-526 LCC Full Website:

- Total Sessions: 24,544
- Most (36%) traffic was typing in the website URL directly
- Most users (36%) were desktop users (not the national trend)
- The most visited page after the Homepage (12,123 pageviews) was the I-526 LCC WEST webpage (9,029)

I-526 LCC EAST:

- Total Sessions: 10,082
- Most (49%) traffic was typing in the website URL directly
- Most users (35%) were desktop users (not the national trend)
- The most visited EAST webpage was the VPIM 2021 page (8,865 pageviews)

5.2 Newsletters & Email Blasts

The I-526 LCC EAST project team will prepare newsletters and email blasts (electronic newsletters) at appropriate intervals for the duration of the project to engage the public. These newsletters will include information, presented in a visually appealing and engaging manner, about both the EAST and WEST projects, along with technical facts and contact information for the project manager. The newsletters will be distributed to residents in the study area via email or standard USPS mail and made available on the website and via social media. Because Hispanic communities have been identified in the I-526 LCC WEST, the newsletter will either include a link to a Spanish translation or be translated in Spanish.

2022 Update: To date the I-526 LCC project team has published a total of sixteen newsletters:

- Volume I Summer 2016 (June) WEST Only: DONE
- Volume II Fall 2016 (November) WEST Only: DONE
- Volume III Spring 2017 Introduces Phase II that would become EAST: DONE
- Volume IV Spring 2018 EAST project has started: DONE
- Volume V Fall 2018 EAST update on electrical survey, traffic analysis, bridge survey, natural and cultural resources: **DONE**
- Volume VI Spring 2019 Update on I-526 LCC EAST, new website and branding, updated study limits, I-26 Corridor Management Study: DONE
- Volume VII Summer 2019 Announcement of I-526 LCC EAST as a PEL, right-of-way FAQ:
 DONE (sent electronically)
- Special Edition FALL 2019 WEST Only: DONE (sent electronically only, distributed in hard copy in flyer boxes and in the community, available at Community Office)

- Special Edition May 2020 WEST Only FAQs: DONE (sent electronically only, distributed in hard copy in flyer boxes and in the community, available at Community Office)
- Special Edition May 2020 EAST Only, Request for participate in MetroQuest survey: **DONE** (sent electronically)
- Volume VIII Special Edition Summer 2020 *EAST Public Information Meeting Handout:* **DONE** (Sent electronically, available in hard copy at the Community Office)
- Special Edition October 2020 WEST Only Update on mitigation planning: DONE (sent electronically only, distributed in hard copy in flyer boxes and in the community, available at Community Office)
- Volume X Fall 2020 Request to participate in the I-526 LCC WEST public hearing: DONE (sent electronically)
- Volume XI Special Edition Spring 2021 WEST only report about the public hearing and upcoming community improvements open house: DONE (sent electronically, available at the Community Office)
- Volume XII Summer 2021 What we heard from the EAST 2020 survey and virtual public meeting, update on mitigation efforts for the WEST: DONE (sent electronically)
- Volume XIII Fall 2021– EAST public information meeting announcement: DONE (sent electronically)

5.3 POSTCARDS/POSTERS/FLYERS

Postcards will be produced and used to notify the community about upcoming public information meetings for the EAST project. These will be distributed one to two weeks prior to the public information meetings. Information on the postcards will include the time, date, location, and detailed specifics about the upcoming meetings, including how to participate virtually, if applicable.

Posters may be placed in local businesses throughout the corridor, along with flyers for distribution to customers. This material will be provided in both English and Spanish (where needed). The posters and flyers would emphasize how the public can participate, why the public should attend these meetings, and what they will learn.

5.3.1 Postcard Schedule and Content

Summer 2020

2020 Update: Postcards were mailed to all mailboxes within a one-mile buffer of the study area (5,136 mailboxes) on July 15, 2020 announcing the upcoming public information meeting

Figure 5.2 Front & Back of 2020 Postcard Mailer

- Fall 2021
 - 2022 Update: Postcards were mailed to all mailboxes within a one-mile buffer of the study area (7,463 mailboxes) on October 8, 2021 announcing the upcoming public information meeting

Provide YOUR input on the **PUBLIC INFORMATION MEETING DETAILS** YOU ARE I-526 Lowcountry Corridor EAST INVITED! 5 - 7 pm 391 Egypt Road Mount Pleasant, SC ALL materials available online October 11 - December 1, 2021 at: FELIX C. Figure 5.3 Front & Back of 2021 Postcard Mailer

5.4 SURVEYS

Surveys will be developed to gather information about the project and surrounding communities, in addition to gathering local sentiment regarding the proposed project.

2020 Update: An online MetroQuest survey was released to the public ahead of the public information meeting on May 14, 2020 to begin gathering the public's feedback. Originally, the plan was to release the survey at the same time as the public information meeting in March of 2020. However, due to public health concerns, the public information meeting was postponed and conducted virtually in July of 2020.

The project team opened the survey in May of 2020 because it was a safe virtual option for participation. The survey remained open through August 15, 2020, the end of the public comment period.

The survey was designed to better identify and refine the purpose and need of future improvements and the suggested range of alternatives that should be explored. A total of 3,103 responses were received. A summary of the results of this survey can be seen below (**Figure 5.4**), full results can be viewed in the 2020 public information meeting summary.

I-526 Lowcountry Corridor EAST **MetroQuest Survey** What we heard! **Survey Live:** May 14 - August 15, 2020 **Top Comments & Concerns:** Most people are using the Most people travel the corridor corridor daily for: using their personal vehicle work, shopping, entertainment, & recreation Travelers are experiencing these top safety-related issues: **Truck Merging** Aggressive/ Congestion Distracted Travelers are experiencing Speeding Drivers congestion during morning & afternoon/evening commutes Most people want to see these improvements along the corridor: **High Occupancy** Vehicle (HOV) Lanes **Truck-only Lanes** or Carpool Lanes High Toll (HOT)

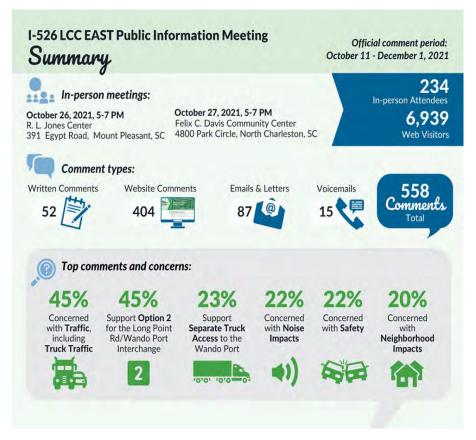

Figure 5.4 MetroQuest Survey Summary

5.5 INFOGRAPHIC DEVELOPMENT

Throughout the project, relevant facts and statistics will be transferred to infographic displays to be used across outreach channels. Results of survey questions and information gathering can also be easily translated into graphics. **Figure 5.5** shows a few examples of graphic representations of project messages.

Figure 5.5: Example Infographics

5.6 TRADITIONAL MEDIA

At key project milestones, the EAST and WEST project teams will provide project updates to specific media outlets.

- The local newspapers identified include the *Post and Courier, the Moultrie News, Daniel Island News, the Chronicle, El Informador* and *the Berkeley Independent*.
- Local television stations: the project team will seek opportunities for interviews on free and cable channels. This may include PSAs for Spanish-language stations. Personnel designated by SCDOT will be available for interviews to discuss issues, updates, and/or concerns regarding the project.

5.6.1 Media Relations

This project is highly visible and media relations will play a key role in informing and educating the public. Briefings will be held at key decision points and at times when it is deemed necessary to disseminate information to the public. Media monitoring will ensure consistency and accuracy of information.

2020 Update: For the 2020 public information meeting, SCDOT distributed a press release to local and regional print and TV media to coincide with the launch of the virtual meeting webpage. A virtual media event was hosted on July 14, 2020 to allow the media an opportunity to schedule time to speak with project officials about the I-526 LCC EAST. The platform used was Zoom.

2022 Update: For the 2021 public information meetings, a press release was distributed by SCDOT's communications office on October 11, 2021 to local and regional media, and an in-person media event was hosted on October 25, 2021 at the I-526 LCC Community Office.

5.6.2 Local Newspapers

Advertisements about upcoming meetings will be placed in local newspapers (traditional as well as niche publications) and other relevant local publications to keep the community informed about status updates, milestones, and next steps, especially at the time of public engagement opportunities like public information meetings. The public involvement team has developed a list of newspapers that is diverse and relevant for the outreach area, including Spanish-language newspapers.

• The local newspapers identified include the *Post and Courier, Moultrie News, Daniel Island News, the Chronicle, the Berkeley Independent,* and *El Informador*.

5.6.2.1 Schedule

- Summer 2020 announcing the first public information meeting
- Fall 2021

 announcing the second public information meeting

2020 Update: For the 2020 public information meeting, newspaper advertisements were placed in local area newspapers to notify people about the meeting. Traditional public notice advertisements were placed in the following newspapers:

the Post and Courier on June 30, 2020 (83,483 readers)

- El Informador on July 8, 2020 (minority-focused newspaper) (32,000 readers)
- The Chronicle on July 1, 2020 (minority-focused newspaper) (6,000 readers).

Figure 5.6 2020 Traditional Public Notice Newspaper Advertisement

2022 *Update:* For the launch of the 2021 public information meetings, newspaper advertisements were placed in the following local newspapers:

- The Post and Courier on October 11, 2021 (83,483 readers) traditional public notice in English with accommodations note in Spanish
- El Informador on October 13, 2021 (minority-focused newspaper) (32,000 readers) display advertisement featuring ways to engage in Spanish
- The Moultrie News on October 13, 2021 (35,600 readers) display advertisement featuring ways to engage in English

Figure 5.7 Newspaper Display Advertisement

5.6.3 Local Television Stations

Opportunities may be sought for interviews on free and cable channels. It is estimated that up to two public service announcements will be prepared. This will include public service announcements for Spanish-language stations.

Personnel designated by SCDOT will be available for interviews to discuss issues, updates, and/or concerns regarding the project.

5.7 SOCIAL MEDIA

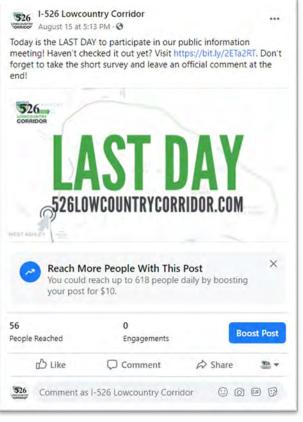

Throughout the project, information will be disseminated on various social media outlets, including Facebook (Facebook.com/526Corridor) and Twitter (@526Corridor). These handles will provide a stream of regular project updates, including photos of the project team and current activities, to promote upcoming events and engagement opportunities. Communication through social media is intended to be interactive and allows users immediate input on the project. The project team will provide SCDOT with a bank of responses to commonly asked questions to ensure timely engagement.

The EAST project team will provide SCDOT with a monthly content calendar. This will include educational campaigns about the project process, transportation, and other topics, in addition to timely project updates. SCDOT and the project team will generate an engaging, regular stream of content. Additionally, the project team will recommend and execute sponsored posts and ads to reach the project's target audience. These techniques will be used to supplement traditional outreach tactics, and efforts will be coordinated between both the EAST and WEST teams.

2020 Update: For the first public information meeting, paid social media was used to drive traffic to the online meeting and the MetroQuest survey which was also linked to from the public information meeting webpage (**Figure 5.8**). Social media ads were created to reach the target audience of residents, businesses, and commuters using I-526 LCC EAST. The below figures show two of the paid social media advertisements that were used to drive users to the project website.

Figure 5.8 2020 Public Information Meeting Paid Social Media Posts

2022 Update: Paid social media was also used to drive traffic to the second public information meeting in 2021 (**Figure 5.9**). Social media ads were created to reach the target audience of residents, businesses, and commuters using I-526 LCC EAST on Facebook. The below figures show two of the paid Facebook advertisements used to drive visitors to the project website. Additionally, organic posts on both Facebook and Twitter encouraged participation online and in person.

526 I-526 Lowcountry Corridor 526 I-526 Lowcountry Corridor ORNOG October 11 3 October 20 at 11:11 AM - 3 The EAST virtual public meeting is live! There you can learn more about the DON'T FORGET: We have two in-person public meeting opportunities next project, what we've been working on, share feedback with the project team week in Mount Pleasant and North Charleston! Jones Center Felix C. Davis Community Center 391 Egypt Rd, Mount Pleasant, SC 4800 Park Circle, North Charleston, SC 1-526 LOWCOUNTRY CORRIDOR EAST VIRTUAL PUBLIC MEETING

Figure 5.9 2021 Public Information Meeting Paid Social Media Posts

5.8 VISUALIZATIONS AND VIDEOS

A short video may be produced illustrating features such as design elements, traffic movements, and benefits to the traveling public, including a fly-through animation of the preferred alternative. There will also be up to four (4) additional educational videos produced to educate the public about key project elements, to be determined through the project development. Topics may include noise impacts, traffic management, freight mobility, etc. Up to 20 photographic renderings will also be prepared providing a point of view perspective of the project to be used at community, stakeholder, and public information meetings. One of the four educational videos will be on the Right of Way Process.

2022 Update: A short video has been produced for this project illustrating how projects are identified and how SCDOT chooses the right solutions. Additional educational videos may be produced to help educate the public about key project elements, to be determined through the project development process.

Project videos can be viewed on the project website at https://www.526lowcountrycorridor.com/project-resources/. Additionally, a project YouTube channel (526 Lowcountry Corridor) has been established to house all videos created for both EAST and WEST projects: https://www.youtube.com/channel/UCEizVvvQjJcoOlVAZzdmpGg/videos.

5.9 DIGITAL BILLBOARDS

Digital billboards may be used to promote informational outlets such as the website and social media, advertise public meetings, and/or inform citizens of the project's progress. Two digital billboards located between Clements Ferry Road and Long Point Road may be used for advertisements related to the EAST project. Billboards may be used to supplement traditional outreach tactics, and efforts will be coordinated between both the EAST and the WEST teams.

5.0 | Public Outreach Tools

2022 Update: The use of billboards in the public involvement process increases exposure to the overall project messaging. By reaching drivers along the project corridor, SCDOT can introduce the project to users of the facility, promote informational outlets such as the website and social media, drive participation at public meetings, and inform citizens of the project's progress. Billboards have been used to promote the I-526 LCC WEST public information meetings, thus driving traffic to the website. It was determined that billboards should be reserved for when the project enters the NEPA process, so billboards have not been used to date for the I-526 LCC EAST.

This page intentionally left blank.

6.0 Public Outreach Events

The project team will utilize a series of events that are designed to engage the community – sharing project-related information, answering questions, and understanding community concerns and needs.

6.1 STAKEHOLDER ENGAGEMENT MEETINGS

Organizations and individuals with an interest in this project have been identified and invited to participate in a stakeholder group. If new stakeholders are identified, they will be added to the list. The stakeholders' role is to provide information and concerns to the project team and to share project information with their constituencies.

2022 Update: The I-526 LCC EAST project has meetings with identified stakeholders approximately quarterly. There, updates are provided on both I-526 LCC WEST and EAST projects. The list of participants is drawn from local public agencies, businesses, residents, non-profit organizations, and special interest groups in the project vicinity.

Stakeholder meeting presentations can be found online after the meeting at https://www.526lowcountrycorridor.com/east/public-involvement/#Stakeholder-Meetings.

6.1.1 Tentative Schedule for Stakeholder Meetings

Table 5.2 Number of Attendees at Stakeholder Meetings

Date of Meeting	Торіс	Number of Attendees
June 2016	General Stakeholder Group: WEST project update	19
November 2016 General	General Stakeholder Group: WEST project update 26	
November 2016 Business	Business Stakeholder Group: WEST project update 4	
May 2017	All Stakeholders: I-526 LCC EAST and WEST project update 32	
May 2018	All Stakeholders: I-526 LCC EAST and WEST project update	33
April 2019	All Stakeholders: I-526 LCC EAST schedule, WEST project update	27
November 2019	All Stakeholders: Status update of EAST, WEST public information meetings materials	19
Summer 2020 (Virtual)	All Stakeholders: Information about the EAST project and upcoming EAST public information meeting, WEST project updates and major milestones, follow-on from public information meeting	28
Fall 2020 (Virtual)	All Stakeholders: Project updates and major milestones such as the Recommended Preferred Alternative for the WEST	16
Summer 2021 (Virtual)	All Stakeholders: WEST project update regarding revisions to the recommended preferred alternative and a summary of what was heard during the Public Hearing	29
Fall 2021 (Virtual)	All Stakeholders: Project update on the EAST public information meetings, including meeting materials such as reasonable alternatives	22

6.2 Speakers Bureau (Speaking Engagements)

The Speakers Bureau will provide a schedule of opportunities to share project updates throughout the public involvement process with area community groups. The target audience of this effort includes business and community groups, from Daniel Island to Mount Pleasant, for potential speaking opportunities, such as the Mount Pleasant Chamber of Commerce, Charleston Metro Chamber of Commerce, Daniel Island Business Association, Charleston Leaders Network among others. The SCDOT project manager or designee will be present at these speaking opportunities.

2022 Update: To date, the following speaking engagements have been conducted:

Table 6.1 Speaking Engagements

Date	Organization	Venue	Approximate Attendance
8/10/2017	Charleston Chamber of Commerce North	Crowne Plaza Airport	40
9/26/2017	Charleston Chamber of Commerce Central	Doubletree by Hilton	40
10/4/2017	Mt Pleasant Rotary Club	Harbor Breeze Restaurant	40
10/23/2017	American Subcontractors Association Meeting	Town & Country Inn - West Ashley	100
1/18/2018	Charleston Chapter Society of Military Engineers	Ashley Venue - West Ashley	50
2/7/2018	Summerville Rotary Club	Sticky Fingers - Summerville	75
5/16/2018	Highland Terrace, Liberty Hall and Russelldale Communities (Councilwoman Dorothy William's Community Meeting)	City of North Charleston - City Hall	99
8/7/2018	Pile Driver Contractors Association of SC	Town & Country Inn - West Ashley	75
10/12/2018	American Society of Civil Engineers - Citadel	Citadel Campus	40
10/26/2018	International Right of Way Association	Charleston Harbor Resort & Marina	100
3/18/2019	Park Circle Community Meeting (Councilman Bob King)	Felix C Davis Community Center	60
4/16/2019	North Charleston Area Top Real Estate Producers	Oscar's Restaurant	50
7/25/2019	Joint Base Charleston Partnership Council	Joint Base Weapons Station	TBD
7/29/2019	North Charleston Rotary Club	Hilton Garden Inn Airport	TBD
8/27/2019	Berkeley County Continuing Education Course	Berkeley County Building	TBD
9/19/2019	Charleston Motor Carriers Association	Doubletree by Hilton	TBD
1/10/2020	Ashley Harbor Neighborhood	West Ashley Middle School	79
1/27/2020	Providence Commons HOA	West Ashley High School Band Room	40
2/3/2020	Ferndale Community Meeting	Ferndale Community Center	14

1/23/2020	Joint Base Charleston Commanders Meeting	Joint Base Weapons Station	40
2/5/2020	Charleston Metro Chamber of Commerce Champion Advocates: Demystifying SCDOT	The Workshop	30
2/25/2020	The Citadel: Engineering Department	The Citadel, Engineering Building	50
3/5/2020	Charleston Trident Association of Realtors, Investment Division	Crowne Plaza	60
6/23/2020	National Association of Women in Construction	Virtual	30
8/14/2020	SC Engineering Conference	Virtual	100
9/17/2020	City of North Charleston, Council Meeting	North Charleston Coliseum	60
10/1/2020	Charleston County Council Meeting	Charleston County Council Chambers	40

2/16/2021	Origin SC, Board Meeting	Virtual	NA

^{*}Grey indicates topic discussed was I-526 LCC WEST only

6.3 SMALL BUSINESS OUTREACH

There will be two rounds of small business outreach. This initiative will accomplish the following:

- Provide project information through the distribution of project literature, including updates on project development and other information in the most recently produced project newsletters.
- Determine the knowledge of and interest in the project.
- Evaluate the best time of day and ideal location to schedule public meetings.

The first round of outreach will start prior to the initial public information meeting. The second round of outreach would occur ahead of the final/second public information meeting.

2020 Update: Small business outreach is expected to occur when the PEL study is complete and a funded project moves into the NEPA phase.

6.4 ELECTED OFFICIALS MEETINGS

Local, state, and federal elected officials will be briefed when project events warrant. Their participation in the information-sharing process is important to the success of the project. The SCDOT Project Manager will send all elected officials notifications and emails with periodic project updates and announcing all public information meetings and stakeholder meetings. Specific briefings will be held, and/or notices issued, prior to public meetings to highlight what is to be presented to their constituents. Elected officials will also be copied on any correspondence distributed to stakeholders. It is envisioned that this is an opportunity for elected officials to provide feedback on the project information they receive in the meeting and provide guidance to SCDOT and the project team on opportunities to engage

their communities in a meaningful way through. Their feedback will result in an update to the community engagement program, as needed. No elected official meetings will be initiated, scheduled, or conducted by the I-526 LCC EAST team unless directed by SCDOT. The project teams will coordinate with local officials from the City of Charleston, City of North Charleston, Town of Mount Pleasant, and Charleston County.

US Senator Tim Scott's Staff	November			

6.1 Non-Governmental Organization (NGO) Meetings

NGOs include entities such as Rotary Clubs, professional societies, environmental interest groups, and chambers of commerce. NGO outreach is another means to inform, educate, and involve the public. It also adds credibility to the project by demonstrating that SCDOT is interested in and wants to hear what people have to say. Outreach or engagement activities with planning organizations, NGOs, quasi-state agencies, and public authorities will be identified and requested prior to engagement efforts.

6.2 Interviews

The project team will talk to knowledgeable persons or community leaders to gain a solid understanding of potential community issues and perceived impacts. These individuals may include Chamber of

Commerce representatives, religious leaders, local elected officials, local planning directors, leaders of social service agencies or non-profit organizations, leaders of area interest groups, school principals, school board members, community or neighborhood association representatives, or others identified as holding special knowledge or interest in the community. The project team will talk to people over the phone or in person to get a perspective on active organizations in the area, issues of local or regional importance, and other people to interview. In addition, these individuals can help in determining the best times and locations for community meetings.

6.3 Public Information Meetings (PIMs)

There will be two rounds of public information meetings (PIMs) conducted during the PEL study. A public notice will be prepared for the newspaper and postcard mailings will also be distributed notifying the public of the meeting date, time, and location.

2020 Update: Two in-person PIMs for the I-526 LCC EAST PEL Study were originally scheduled to be held in-person on March 24, 2020 and March 26, 2020 in Mount Pleasant and North Charleston, respectively. In response to Governor McMaster's direction to limit large public gatherings because of public health concerns, the meetings were postponed. When social distancing guidelines continued to develop and evolve over several months, amid increasing public health concerns, it was decided by SCDOT and FHWA to hold the meetings completely online in lieu of the in-person meetings. Read more about this virtual meeting below in **Section 6.5 Virtual Public Information Meeting**.

2022 Update: Two in-person PIMs for the I-526 LCC EAST PEL Study were held on October 26 and October 27, 2021, in Mount Pleasant and North Charleston, respectively. Additionally, all PIM materials were available online at www.526lowcountrycorridor.com/eastvpim2021/.

The purpose of the PIMs was to explain how public input has been used to inform the concepts development and screening process, ask for public input on the Reasonable Alternatives, and outline the next steps in the project development process.

Additionally, SCDOT wanted to gather information from the public, resource agencies, and project stakeholders on any resources in the study area including historic or cultural resources in the area. The information presented at the PIMs were available in both English and Spanish.

These drop-in meetings took place partially indoors and partially outdoors. These open-house meetings did not have a formal presentation. Content was designed to educate the public about the potential improvements along this corridor, analysis done to date, and how their previous input had been used. Additionally, the meeting was designed to receive input from the public. Handouts were available in English and Spanish, and translators were available on site at each meeting to help guide Spanish-speakers through the materials. In-person materials included a mixture of static boards and smartboards. The layout was setup with sign-in and safety screening tables outside, static boards arranged under a tent, and smartboards, roll plots and additional static boards set up inside the venues. Understanding the current public health concerns, masks were highly encouraged when not required and temperature checks were performed at all meetings.

A total of 558 comments were received during the formal comment period (October 11 through December 1, 2021). Of those, 32 were duplicate comments. Duplicate comments are comments that were made by the same person twice or more that are verbatim or have the exact same sentiments and

themes. Duplicate comments count toward the total number of comments made, but their sentiments and themes were only tallied once.

There were multiple ways for people to submit comments: through the website (virtual PIM webpage or general contact page), email comments directly to info@526LowcountryCorridor.com, mail to Joy Riley, SC Department of Transportation, Post Office Box 191, 955 Park Street, Room 401, Columbia, SC 29202-0191, or by leaving a voicemail on the I-526 LCC hotline (843.258.1135). Comments received include:

- 377 online comments through the PIM webpage
- 27 online comments through the main project contact webpage
- 84 email comments
- 15 hotline comments
- 52 in-person comments
- 3 stakeholder comments

The top six comments or concerns received during the public comment period were:

- 1. Support for Option 2 for the Long Point Road/Wando Port Interchange (45%)
- 2. Traffic Concerns (Inclusive of Truck Traffic Concerns) (45%)
- 3. Truck Traffic Concerns (37%)
- 4. Support for Separate/Dedicated Truck Access to/from Port (23%)
- 5. Noise Concerns (22%)
- 6. Safety Concerns (22%)

6.4 VIRTUAL PUBLIC INFORMATION MEETING

Virtual public information meetings (PIMs) will be conducted during the appropriate stages of project development, likely in concurrence with the in-person PIMs. The virtual meetings will afford the public the opportunity to participate in a public meeting from anywhere and anytime during the official public comment period. This provides additional flexibility for those members of the public with scheduling or transportation challenges to participate, as well as those members of the public not traditionally comfortable with government settings.

2020 Update: The 2020 virtual PIM was hosted on the project website, allowing the public, resource agencies, and project stakeholders to access project information and comment on the project on their schedule (**Figure 6.1**). The purpose of the virtual PIM was to provide the public, resource agencies, and project stakeholders an opportunity for meaningful and timely input into the PEL Study. The materials presented project information including the project purpose and need, the PEL study process, existing conditions within the study area, and solicited comments on the presented materials. Materials were presented graphically on boards and in a video that summarizes how SCDOT plans and makes highway improvements. Attendees were offered various methods (webpage, email, toll-free hotline, and by scheduling an appointment at the Community Office) to provide comments and ask questions.

Additionally, SCDOT wanted to gather information from the public, resource agencies, and project stakeholders on any resources in the study area including historic or cultural resources in the area. The information presented at was available in both English and Spanish. Closed captioning was available in the video, as well.

There were a total of 2,129 sessions, or views, on the public meeting webpage during the public comment period, from July 15 to August 15, 2020. Of the age and gender data that was collected from website sessions, the highest participating cohort were males in the 35-44 age range (117), while the highest participating cohort for women was the 55-64 age range (93).

A total of 84 comments were received during the formal comment period (July 15 through August 15, 2020). There were two ways for people to submit comments within the website online: the virtual PIM webpage and the main I-526 LCC project webpage. Additionally, people could email comments directly to info@526LowcountryCorridor.com Comments received include:

- 76 online comments through the PIM
- 7 online comments through the main project webpage
- 1 email comment during the PIM period

The top five comments or concerns received during the PIM were:

- 1. Noise concerns (21.3%)
- 2. Neighborhood impact concerns (12.4%)
- 3. Alternative truck/freight routes/options (9.5%)
- 4. Trucks in the right lane/truck lanes (5.9%)
- 5. Supports -widening (5.3%)

Figure 6.1 I-526 LCC EAST Public Meeting Webpage (2020)

Public Meeting Overview

The public meeting and survey are now closed. The I-526 Lowcountry Corridor EAST public information meeting and survey were presented to the public July 15 – August 15, 2020. Materials for the public meeting are below.

NEEDS |

SURVEY

HANDOUT: ENG | ES

Project Background

SCDOT is conducting a Planning & Environmental Linkages (PEL) Study for I-526 LCC EAST, which extends from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The PEL study will identify existing and projected transportation issues within the corridor through public and stakeholder engagement.

The results of the study will help establish a vision for the corridor that will guide future transportation decision-making. This resulting information of the PEL study will be carried into the next phase of project development which is the National Environmental Policy Act (NEPA) process. After the needs are better understood in this corridor, and potential improvements identified, the next steps, including potential phasing and project opportunities, may be developed. To learn more about the I-526 LCC study area and the PEL study process and schedule, view the boards below.

2022 Update: To accompany the in-person 2021 meetings, an online public meeting was available throughout the comment period (October 11 through December 1, 2021) and will remain on the project website for the duration of the project development process (**Figure 6.2**). The online format allowed the public to view materials and participate on their own schedule. The materials were divided into four main sections: Project Background, Growing Mobility Needs, Concepts Development & Screening Process, and Next Steps & Comments. All materials were available online in both English and Spanish.

Figure 6.2 I-526 LCC EAST Public Meeting Webpage (2021)

Retrieved January 13, 2022 from https://www.526lowcountrycorridor.com/eastvpim2021/

There were 6,939 sessions on the PIM webpage during the public comment period. The average time spent on the virtual PIM was 4 minutes and 35 seconds. Of the age and gender data that was collected from website sessions, the highest participating cohort were males (59%) and people within the 35-44 age range.

7.0 OUTREACH TO TRADITIONALLY UNDERREPRESENTED COMMUNITIES

According to U.S. Census data, low-income, seniors, and limited English proficiency populations are included in the population of North Charleston and the surrounding areas. Continuous "on-the-ground" outreach to, and involvement of, traditionally unrepresented communities identified in the study area will be an important element of the public involvement activities. Special effort will be made to identify and meet with leaders in these communities and go to activity centers such as churches and social service organizations to inform, educate, and seek input from residents and others in these communities. Special attention will be paid to tailoring materials and outreach to these communities to ensure the fullest participation as possible. Potential strategies for reaching these populations may include the following opportunities.

2022 Update: The items below in **Sections 7.1** and **7.2** have been removed from the outreach plan for the I-526 LCC EAST. However, the following additional items were done to promote participation by traditionally underserved populations:

- Summer 2020 ALL public information meeting materials, including the MetroQuest survey, were translated into Spanish.
- October 2021 The project team presented to the Community Advisory Council (CAC) on the I-526 LCC EAST public information meeting materials. The CAC was created to help advise project team members on the communities' needs for the I-526 LCC WEST. CAC members provide input on actions to minimize and mitigate impacts. The CAC is made up of community leaders, neighborhood residents from Russelldale, Ferndale, Liberty Park and Highland Terrace, members of organizations active in the community, and local church members.
- October 2021 ALL public information meeting materials were translated into Spanish, and a Spanish translator was available at each of the in-person public information meetings.
- October 2021 In-person public information meetings were conducted to encourage
 participation from traditional underserved populations who may not have access to internet.
 Additionally, materials were available through USPS by request for those who did not wish to
 access the information online or in-person.

7.1 YOUTH ENGAGEMENT

The project team will contact local schools to engage their teachers and students in the data collection and project information distribution effort.

The project team will develop survey packets for distribution at participating elementary schools within the study area. A survey packet that includes a map will be created for each school within the entire project area. These packets will be given to 4th, 5th, or 6th grade students to take home to survey their parents.

7.2 ADDITIONAL OUTREACH OPPORTUNITIES

- Coordinate with the local senior citizen and disability coordinators to assist in conducting group meetings at local senior centers.
- Coordinate with local homeowners' associations (HOA) to publish project information in their community newsletters or attend HOA meetings to provide project updates.
- Create customized, free PSAs for Spanish-speaking radio stations to specifically reach LEP communities, particularly AM stations (Regional Mexican, Spanish Contemporary).

Table 8-1 lists the schools, churches, recreational facilities, and neighborhoods that have been identified in the North Charleston portion of EAST project study area. The EAST team will coordinate with the WEST project team to obtain outreach activity responses and public feedback already completed for the WEST project and determine which team will be responsible for future outreach efforts.

8.0 Additional Outreach

8.1 WALKING TOUR

A walking tour may be provided by members of SCDOT or the project team. This walking tour would provide one-on-one outreach in an informal group setting with the goal of relationship building.

8.2 Online Mapping Tools and Online Story Maps

Online engagement tools are fast becoming the quickest, easiest and most cost-effective way to reach a large number of people and maximize inclusiveness. Interactive mapping allows people to: identify routes, resources, and places of interest; leave comments; agree/disagree; and upload photos. Story maps are a means of visual storytelling. Story maps provide an interactive visual experience for non-technical audiences. Various uses of mapping tools will be explored, and if deemed usable, may be implemented by the project team.

To date, a story map delving into the NEPA process has been developed for the project as well as an Existing Plus Committed projects map for the Charleston region. These tools will be integrated into the project website, as well.

2022 Update: An interactive online map was created to show the design concepts evaluated for each section of the I-526 LCC EAST. This map was made available during the 2021 public information meeting from October 11, 2021 through December 2, 2021. The map will remain available online through the duration of the project development process.

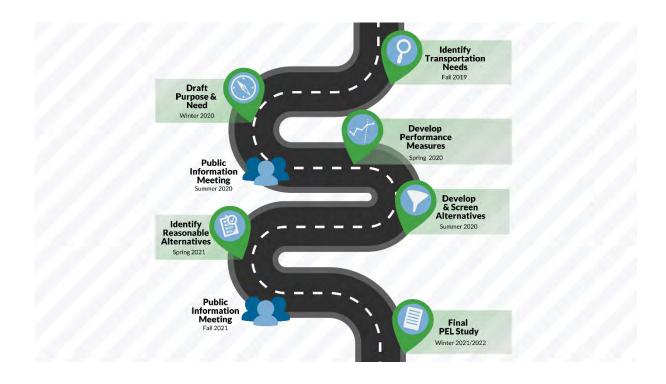

This page intentionally left blank.

9.0 SCHEDULE

The anticipated schedule for the completion of the PEL study is Winter 2021/early 2022. This schedule will be revised/updated as the project moves forward, and new information is revealed that may result in schedule adjustments.

The following list identifies the schedule highlights:

This page intentionally left blank.

PROJECT LOGOS

Stacked

Horizontal

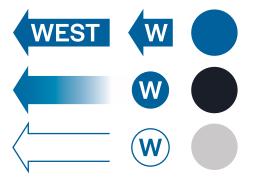

DIRECTIONAL LOGOS

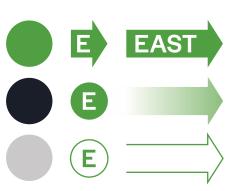

I-526 Lowcountry Corridor West extends along existing Interstate 526 (I-526) from Rivers Avenue in North Charleston to Paul Cantrell Boulevard in West Ashley. The roughly 8-mile-long project is proposed to reduce congestion, improve traffic conditions and enhance safety along a heavily traveled segment of I-526.

I-526 Lowcountry Corridor East extends along existing Interstate 526 (I-526) from North Rhett Avenue in North Charleston to Johnnie Dodds Boulevard in Mount Pleasant. The roughly 11-mile-long project consists of numerous operational improvements, including interchange improvements and roadway widening along a heavily traveled segment of I-526.

No part of the 526 Lowcountry Corridor should be confused with the extension of the Mark Clark Expressway, which is the completion of Interstate 526 from its current terminus at Savannah Highway to an end at Folly Road.

PUBLIC INFORMATION MEETING 1 & METROQUEST SURVEY SUMMARY

The initial public engagement efforts for the I-526 Lowcountry Corridor (I-526 LCC) EAST Planning and Environmental Linkages (PEL) Study located in the Charleston region of South Carolina, were conducted virtually between May 14 and August 15, 2020 because of current public health concerns and required social distancing guidelines. An interactive online survey (MetroQuest) was released on May 14 and remained open until August 15, 2020. This survey was followed by an on-demand, Public Information Meeting (PIM) hosted online at www.526lowcountrycorridor.com/vpim-east/ from July 15 to August 15, 2020. The comment period associated with this PIM effort ended on August 15, 2020. The MetroQuest survey had 3,103 responses and the PIM website had 2,129 sessions (views). The PIM and the MetroQuest survey are further described below.

	Public Information Meeting	Survey
Platform Used	Project Website	MetroQuest
Dates Available/	July 15 – August 15, 2020	May 14 – August 15, 2020
Comment Period		
Participation	2,129 Sessions	3,103 Responses

Figure 1 I-526 LCC EAST Study Area

1.1 Public Information Meeting (PIM)

Two PIMs for the I-526 LCC EAST PEL Study were originally scheduled to be held in-person on March 24, 2020 and March 26, 2020 in Mount Pleasant and North Charleston, respectively. In response to Governor McMaster's direction to limit large public gatherings because of public health concerns, the meetings were postponed. When social distancing guidelines continued to develop and evolve over several months, amid increasing public health concerns, it was decided by the South Carolina Department of Transportation (SCDOT) and the Federal Highway Administration (FHWA) to hold the PIM online in lieu of the in-person meetings. The PIM was hosted on the project website, allowing the public, resource agencies, and project stakeholders to access project information and comment on the project on their schedule.

The purpose of the PIM was to provide the public, resource agencies, and project stakeholders an opportunity for meaningful and timely input into the PEL Study. The PIM presented project information including the project purpose and need, the PEL study process, existing conditions within the study area, and solicited comments on the presented materials. Materials were presented graphically on boards and in a video that summarizes how SCDOT plans and makes highway improvements. Attendees were offered various methods (webpage, email, toll-free hotline, and by scheduling an appointment at the Community Office) to provide comments and ask questions.

Additionally, SCDOT wanted to gather information from the public, resource agencies, and project stakeholders on any resources in the study area including historic or cultural resources in the area. The information presented at the PIM was available in both English and Spanish. Closed captioning was available in the video, as well.

1.1.1 PIM Advertisement

Multiple types of advertisement, both traditional and non-traditional, were used to publicize the PIM. These methods are outlined below.

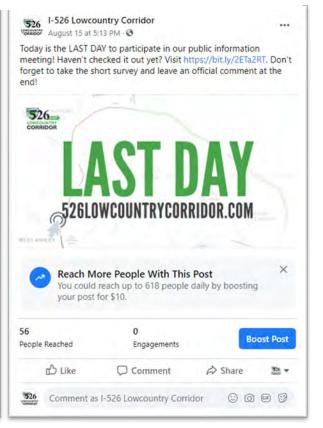

Advertising Methods 1.1.1.1

Paid Social Media

Paid social media was used to drive traffic to the online meeting and the MetroQuest survey which was also linked to from the PIM webpage. Social media ads were created to reach the target audience of residents, businesses, and commuters using I-526 LCC EAST PEL Study. Figure 2 shows two of the paid social media advertisements that were used to drive users to the project website.

Eblast

An eblast is an email message that goes out to a group of people in mass simultaneously. In this case, the I-526 LCC EAST project has a joint mailing list of interested parties with the I-526 LCC WEST project. People can subscribe to receive email updates online for these projects.

- May 14, 2020: An eblast announcing the MetroQuest survey went out to all stakeholders and interested parties (1,127 email addresses).
- May 27, 2020: An email regarding the announcement of the MetroQuest survey was sent to the list of minority community influencers (149 email addresses).
- July 15, 2020: Another email notifying all stakeholders and interested parties that the PIM was live online and the MetroQuest survey was extended (1,628 email addresses).
- August 4, 2020: A duplicate notification about the PIM was sent to all interested parties and stakeholders (1,956 email addresses).

Postcard

Postcards were mailed to all mailboxes within a one-mile buffer of the study area (5,136 mailboxes) on July 15, 2020. Postcards were mailed in a timely manner so that they would hit mailboxes the day the PIM went live.

Provide input on I-526 Lowcountry Corridor EAST **Public Information** Meeting now online only for your health and safety! Public Information Meeting and Survey Available Until Aug. 15, 2020 at: CORRIDOR E

PUBLIC INFORMATION MEETING The I-526 LCC EAST ke Our SCENT

Figure 3 Front & Back of Postcard Mailer

Press Release/Media Day

A press release was distributed on the day of the launch of the PIM online, and a virtual media day was hosted on July 14, 2020. The virtual media day gave media outlets an opportunity to schedule time to speak with project officials about the I-526 LCC EAST project through an online meeting platform. The following is the record of media outlets that covered the I-526 LCC EAST project.

Date	Coverage	Outlet Name	Medium

Newspaper Advertisements

Newspaper advertisements were placed in local area newspapers to notify people about the PIM. Advertisements were placed in the following newspapers:

- the *Post and Courier* on June 30, 2020
- El Informador on July 8, 2020 (minority-focused newspaper)
- The Chronicle on July 1, 2020 (minority-focused newspaper).

PROPOSED I-526 LOWCOUNTRY CORRIDOR EAST PROJECT – From Virginia Avenue in North Charleston to US 17 in Mount Pleasant Berkeley and Charleston Counties

Virtual Public Information Meeting

Virtual Public Information Meeting:

Due to health and safety concerns, a Public Information Meeting will now be held ONLINE ONLY for the I-526 Lowcountry Corridor EAST project. It will be available online at www.526lowcountrycorridor.com from July 15th to August 15th. As part of this online meeting, the public comment period and survey will also last until August 15th and are available on the website.

Purpose:

The I-526 Lowcountry Corridor EAST project runs 11 miles from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. As a Planning & Environment Linkages (PEL) study, the purpose of the project is to determine the needs along the corridor on I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant. The purpose of the virtual meeting is to provide the public access to the information online that would have been provided during an in-person meeting. It will provide an opportunity to discuss the needs of the I-526 corridor, explain the PEL study process, and provide an update to the community on the project. Another purpose of the meeting will be to gather input from the public or any interested organization on historic or cultural resources in the area. SCDOT is seeking input as a part of this virtual public information meeting to assist in identifying information relative to this project.

Process:

Tentative project schedules for completion of this Planning and Environment Linkages (PEL) Study will be discussed. Maps of the project study area and existing conditions will be available, and citizens may ask questions and provide comments regarding the possible social, economic, and environmental effects of the project. Property owners and business owners on or near the project area are urged to attend.

Review:

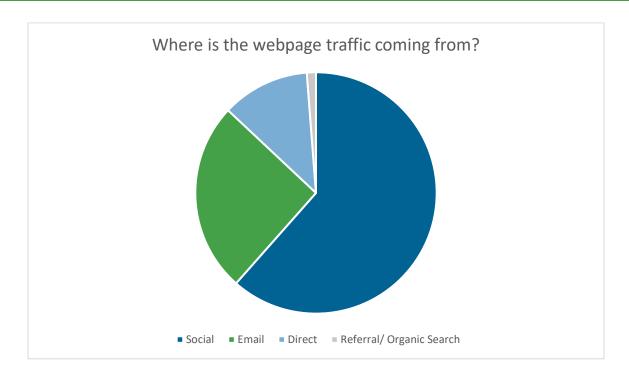

Additional information concerning the project may be obtained online at www.526lowcountrycorridor.com or by contacting Project Manager Joy Riley at 843.258.1135 or 866.632.5262 (toll free). Persons with disabilities or limited internet access who may require special accommodations should contact Ms. Betty Gray at 803-737-1395.

South Carolina Department of Transportation

1.1.1.2 Website Analytics

Website analytics show that paid social media was one of the top drivers to the website, followed by email traffic, and direct traffic. Direct traffic refers to people who typed in the website address directly to get to the site instead of clicking a link from somewhere else. This data is from Google Analytics, rather than self-selection, meaning people coming to the website did not self-identify how they arrived.

Since many advertisement methods can't be tracked by Google Analytics, if respondents submitted a comment from within the PIM webpage, they were asked how they heard about the PIM. Of the 61 respondents who answered this question,

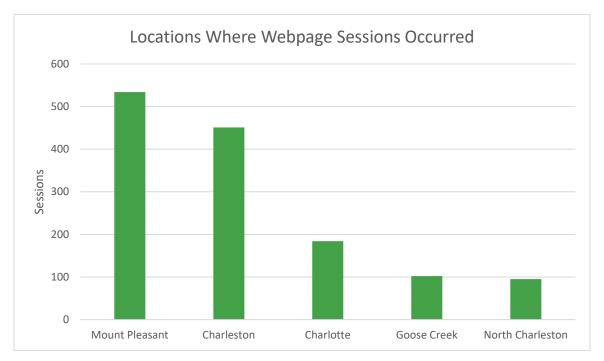

- 27.9 percent learned about it from an email/notification from a community organization,
- 23 percent learned about it from social media,
- 18 percent learned about it from a postcard,
- and 31.1 percent learned about it from other sources (newspaper, other websites, etc.).

1.1.2 PIM Demographics

There were a total of 2,129 sessions, or views, on the PIM webpage during the public comment period, from July 15 to August 15, 2020. Of the age and gender data that was collected from website sessions, the highest participating cohort were males in the 35-44 age range (117), while the highest participating cohort for women was the 55-64 age range (93).

Geographically, participants were dispersed across the study area from Mount Pleasant to Charleston (likely Daniel Island) and North Charleston. Figure 1 shows a map of the I-526 LCC EAST study area. As I-526 is a regional corridor, a strong contingency from Goose Creek residents who likely use I-526 to reach key regional centers of employment and recreation was observed. The Charlotte, North Carolina aberration could be from a number of factors such as their internet service provider registering them in Charlotte (often is the case in businesses), tourists, or those currently out of the area.

1.1.3 PIM Comments

There were a total of 84 comments received during the formal comment period (July 15 through August 15, 2020) aggregated from the comment forms on the project webpage and the emails. There were two ways for people to submit comments within the website online: the VPIM and the main I-526 project webpage. Additionally, people could email comments directly to info@526LowcountryCorridor.com Comments received include:

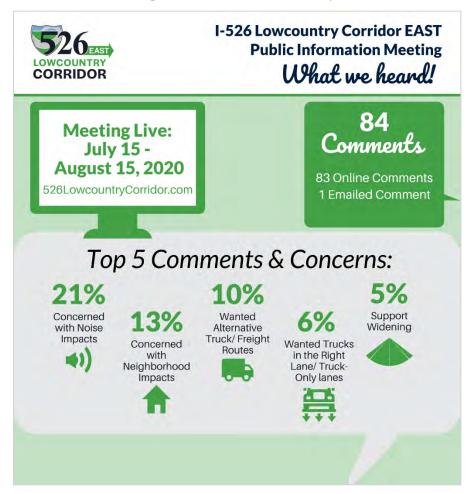

- Seventy-six (76) online comments through the PIM
- Seven (7) online comments through the main project webpage
- One (1) email comment during the PIM period

The top five comments or concerns received during the PIM were:

1. Noise -21.3 percent

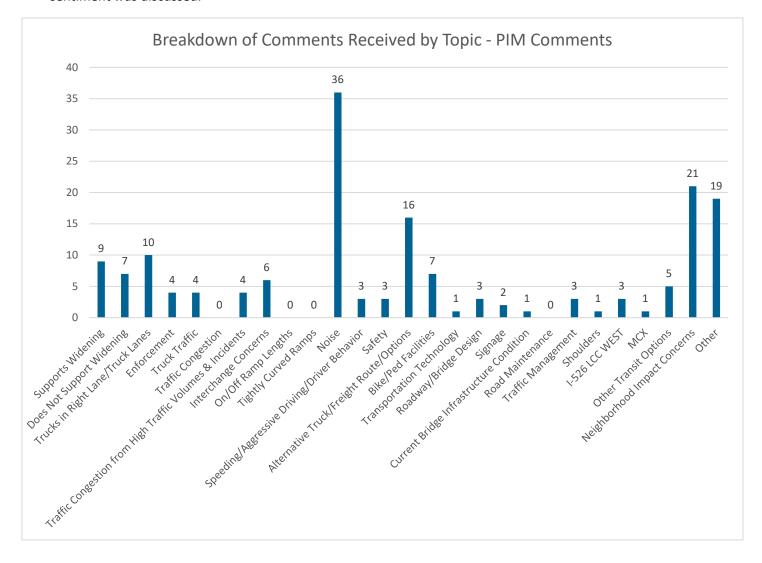

- Neighborhood impact concerns -12.4percent
- 3. Alternative truck/freight routes/options 9.5 percent
- 4. Trucks in the right lane/truck lanes 5.9percent
- 5. Supports -widening 5.3 percent

Figure 5 PIM Comment Summary

Note: Totals will not equal 84, as one comment could contain multiple suggestions or points. Some comments had suggestions outside of these, but the categories were developed based on recurring themes.

These tallies are representative of general sentiments only. Counts were applied if a specific theme or sentiment was discussed.

The most common comment was related to noise and how the project needs to incorporate noise mitigation. Multiple comments discussed how tree clearing has exacerbated noise in the nearby neighborhoods.

The second most common comment was related to neighborhood impact concerns and how I-526 presently, and with the project (they were likely assuming widening was a given), will impact their neighborhood. Most comments were related to present and future noise concerns in particular communities adjacent to the I-526 corridor in Mount Pleasant and Daniel Island. This also included comments related to property values.

The third most common comment topic was related to alternative truck or freight routes or other trucking options. This includes designating truck routes, alternative methods of moving freight to the port, such as rail or ferry, or creating a specific exit for the port. This also includes different truck delivery and pickup times. Another suggestion was to relocate the port. In general, the idea of alternative truck/freight routes/options encompasses methods of getting truck traffic off the I-526 Lowcountry EAST corridor.

The fourth most common comment topic was related to trucks needing to stay in the right lane or designated truck-only lanes. Many comments discussed that trucks will travel in the left lanes and slow traffic.

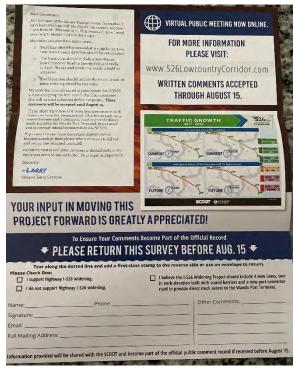

The fifth most common topic was related to supporting additional lanes or widening.

1.1.4 Additional Comments

During the formal comment period for the PIM, the project team was alerted to a postcard mailing from State Senator Larry Grooms to his constituency (adjacent or within the study area). The postcard requested individuals to share whether they support or do not support the widening of I-526 and to add any comments. A total of 167 postcards were received by Senator Grooms office and were then submitted to SCDOT. The SCDOT emailed PDF scans of the postcards to the project team on August 25, 2020 following the public comment period. The postcards are included as an attachment and have been summarized as part of the public comment record per request by the SCDOT.

Figure 6 Senator Grooms Postcard Mailer

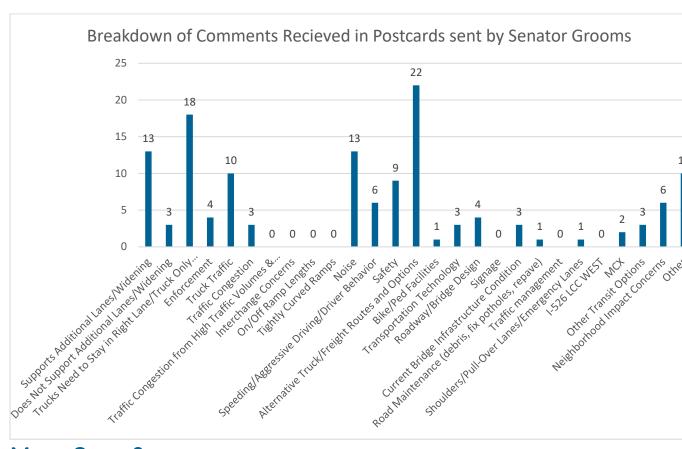

Of the 167 comments, respondents were asked to check one of the following:

- I support Highway I-526 Widening,
- I do not support Highway I-526 Widening, or
- I believe the I-526 Widening Project should include 4 new lanes, two in each direction built with sound barriers and a new port connector road to provide direct truck access to the Wando Port Terminal

Additional comments on the postcards were analyzed in the same format as the PIM comments. A breakdown of general sentiments in the additional comments is below. Overall, constituents were most concerned about truck traffic and alternative routes, truck-only lanes, and noise.

METROQUEST SURVEY

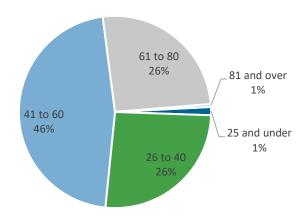

1.2

An online MetroQuest survey was released to the public ahead of the PIM on May 14, 2020 to begin gathering the public's feedback. The survey was designed to better identify and refine the purpose and need of future improvements and the suggested range of alternatives that should be explored. A total of 3,103 responses were received.

1.2.1 MetroQuest Survey Demographics

While a total of 3,103 people took the MetroQuest survey, not all participants of the survey opted to provide their demographic information. Many provided some answers but did not answer all asked questions.

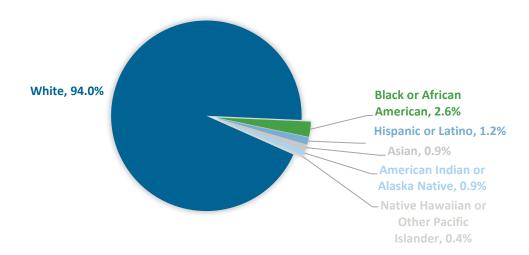

There were 1,877 people who provided their age. Of this group who self-identified, the largest number of participants came from the 41 to 60 age range (46.4%), followed by those 26 to 40 (26.1%), and then the 61 to 80 (25.7%). The 25 and under and 81 and over age cohorts combined comprise less than 2% of respondents of the survey. This distribution is similar to other surveys within the region.

There were only 1,708 people who responded to the ethnicity demographic question. There was not a diverse ethnic distribution among survey respondents, with the majority of respondents being white (94%) followed by Black or African American (2.6%) and Hispanic or Latino (1.2%). The ethnic distribution is displayed in the chart below.

To increase overall minority participation, Facebook boosted posts were launched to specifically target the geographic areas identified in the EPA's EJ Screening map as higher-density minority areas surrounding the project zone, pulling funding from those targeting the full region. These areas overlap with those identified as having a greater number of Hispanic residents: Snowden in Mount Pleasant (off Long Point Road), the area next to the base of the bridge in North Charleston (between VA avenue and Rivers), and along Clements Ferry and 6 Mile in Mount Pleasant. Additionally, emails were sent to the minority community leaders project email list regarding the surveys' availability.

MetroQuest Ethnic Distribution

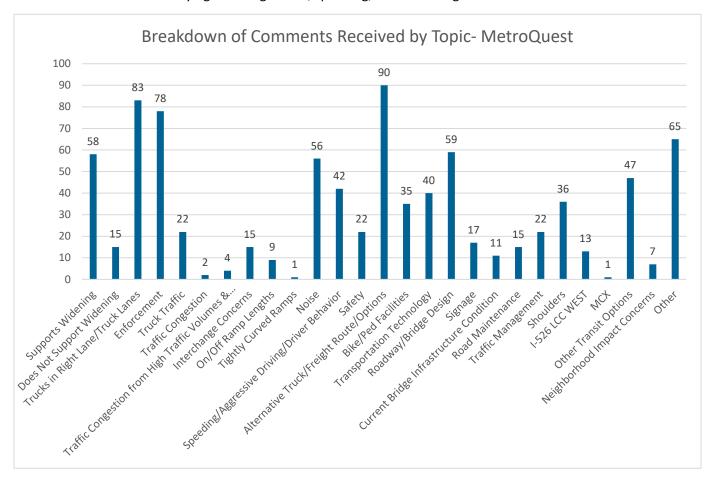

As a comparison, the 2013-2017 American Community Survey (ACS) estimates that in terms of Hispanic population, Daniel Island has a low percentage. Block groups adjacent to the I-526 LCC corridor have a percent Hispanic population ranging from 0.22 percent to 4.67 percent. Mount Pleasant has a slightly higher Hispanic population, with block groups adjacent to the corridor ranging from 0.83 percent to 7.6 percent.

In terms of African American population, Daniel Island has a fairly significant population. Block groups adjacent to the I-526 LCC EAST range from 0 percent to 38.26 percent. Mount Pleasant has a lower percent African American population, with block groups adjacent to the corridor ranging from 0.79 percent to 9.28 percent.

1.2.2 MetroQuest Comments by Topic

Participants had the ability to write-in comments in the "Prioritize Solutions" slide of the survey. The chart below categorizes the comments similarly to the above charts, "Breakdown of Comments Received by Topic - PIM Comments" and "Breakdown of Comments Received in Postcards Sent by Senator Grooms."

Results from tallying the write-in comments indicate that the majority of people are most concerned with alternative truck/freight route options, truck-only lanes/trucks staying in the right lane, and enforcement of trucks staying in the right lane, speeding, and other negative driver behaviors.

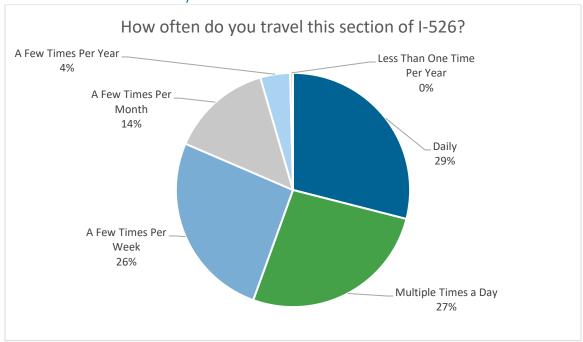

1.2.3 Traveler Survey Results

Overall, the results of the survey indicate that the majority of people who took the survey are using I-526 LCC EAST daily for their commutes and experience congestion during that time. Travelers are most concerned with congestion and safety issues due to truck traffic and would like to see truck lanes or alternative routes for trucks/freight and safety enforced. A deeper dive into the results of each survey question is below.

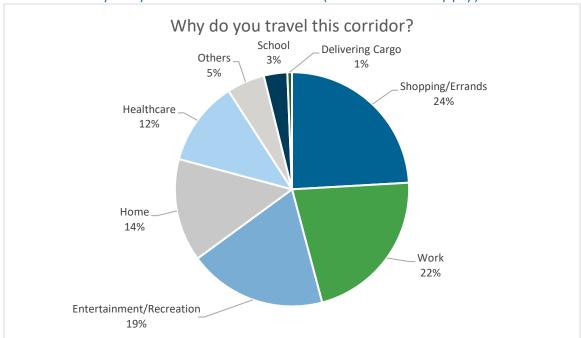

Figure 7 MetroQuest Survey Summary

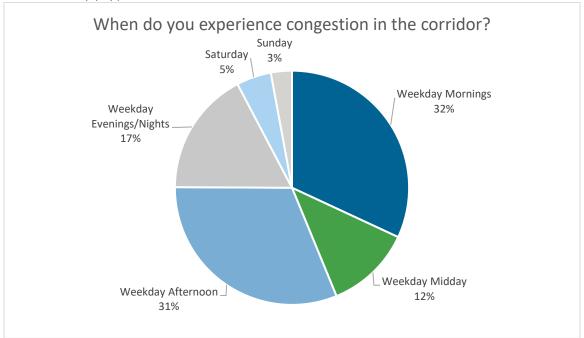

How often do you travel this section of I-526? 1.2.3.1

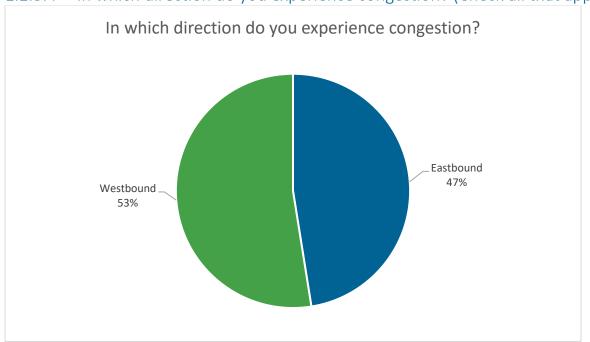

1.2.3.2 Why do you travel this corridor? (Check all that apply)

When do you experience congestion in the corridor? (Check all that 1.2.3.3 apply)

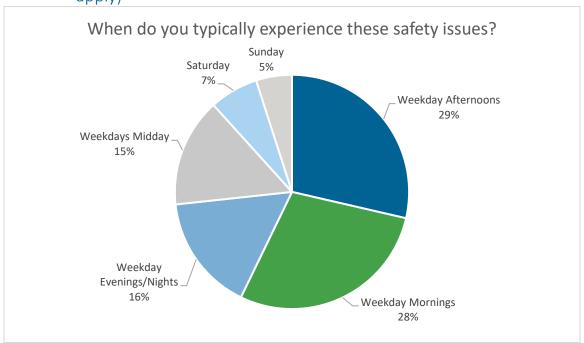

In which direction do you experience congestion? (Check all that apply) 1.2.3.4

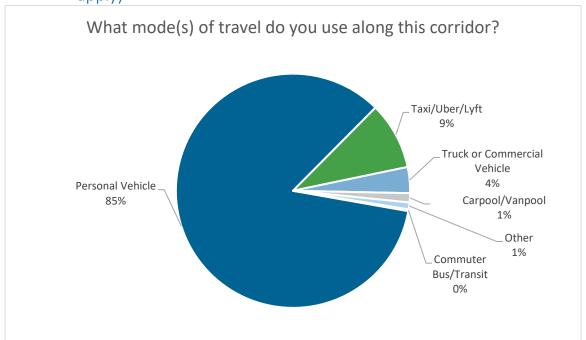

What safety issues do you typically experience when using this corridor? 1.2.3.5 (Check all that apply)

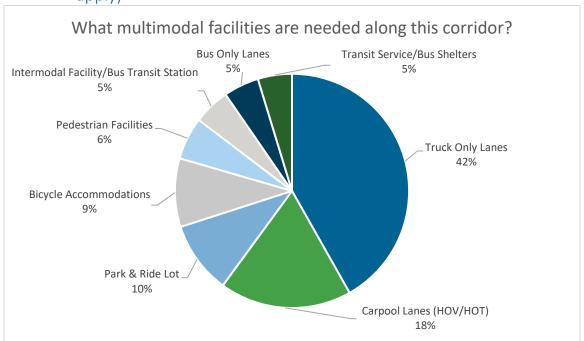

When do you typically experience these safety issues? (Check all that 1.2.3.6 apply)

What mode(s) of travel do you use along this corridor? (Check all that 1.2.3.7 apply)

What multimodal facilities are needed along this corridor? (Check all that 1.2.3.8 apply)

1.2.4 Mapping Concerns

The image below represents the hot spot areas on the I-526 LCC East corridor as identified by participants. The three main hotspots on the corridor included the Don Holt Bridge, the Wando Bridge, and the Long Point Road interchange. The mapped concerns were quantified to determine what issues were most prevalent for that hotspot.

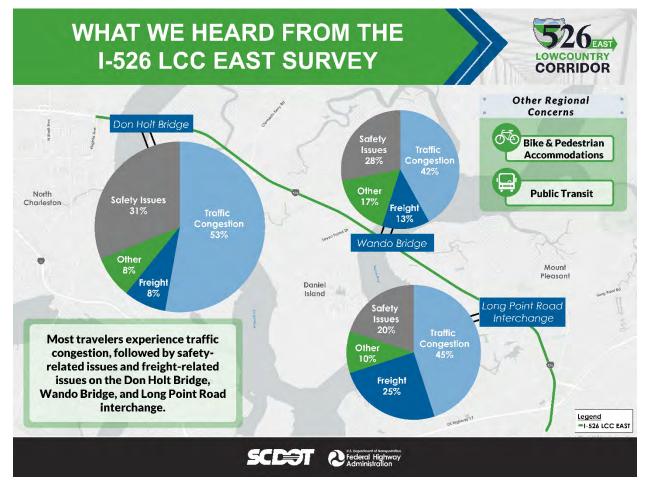

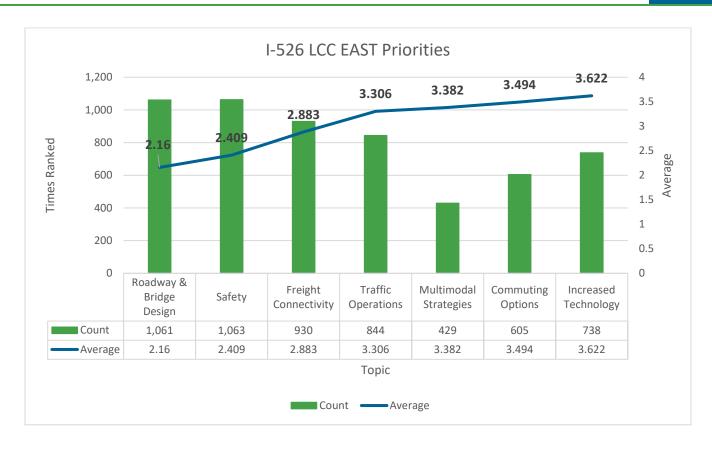

Figure 8 Geographical Comment Analysis

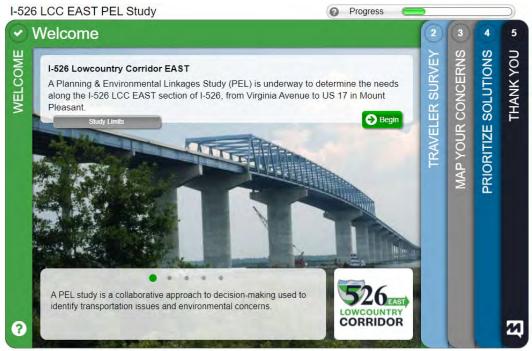

1.2.5 Prioritize Solutions

The "Solutions & Strategies" slide asked respondents to select and order their Top Five items. The table below shows the count (the green bars) which represents how many times that topic was in their Top Five. The table also shows the average ranking of that topic when selected in the Top Five. The lower the average, the higher order that topic was placed (or the higher priority).

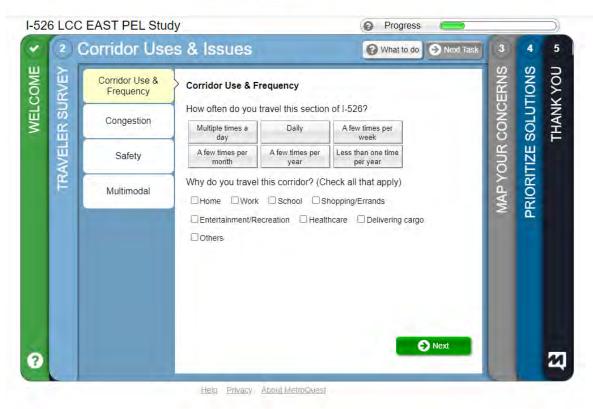

In summary, Roadway & Bridge Design was ranked as the highest priority item as it was ranked in the Top Five 1,061 times and received an average ranking of 2.16. Safety was the second highest priority as it was ranked in the Top Five 1,063 times and received an average ranking of 2.41. Freight Connectivity was the third highest priority as it ranked in the Top Five 930 times and received an average ranking of 2.88. Traffic Operations was the fourth highest priority as it ranked in the Top Five 844 times and received an average ranking of 3.31. The fifth highest priority was Multimodal Strategies as it ranked in the Top Five 429 times and received an average ranking of 3.38.

I-526 Lowcountry Corridor EAST Public Information Meetings

Meeting Purpose

- Explain Planning & Environmental Linkages studies
- Provide information on existing conditions
- Receive comments on the draft Purpose & Need
- Gather information on historic or cultural resources

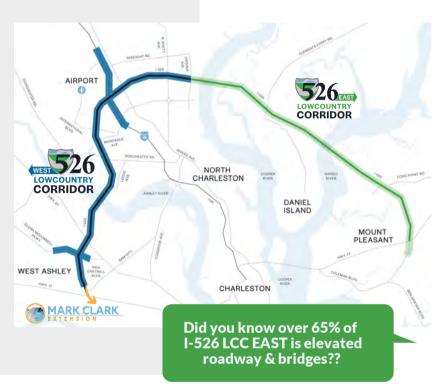

Tuesday, March 24, 5-7 PM R. L. Jones Center 391 Egypt Road, Mount Pleasant, SC

Thursday, March 26, 5-7 PM
Felix C. Davis Community Center
4800 Park Circle, North Charleston, SC
CARTA Routes 13 & 14

Q

Study Overview

SCDOT is conducting & **Planning** Environmental Linkages (PEL) Study for the I-526 LCC EAST, which extends along I-526 from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The PEL study will identify existing and projected transportation issues within the corridor through public and stakeholder engagement. The results of the study will be used to establish a vision for the corridor that will guide future transportation improvement projects. This resulting information of the PEL study will be carried forward into the next phase of the project development process, the National Environmental Policy Act (NEPA) process. After the needs are better understood in this corridor. and potential improvements identified, the next steps, including potential phasing and project opportunities, may be developed.

Draft Purpose

Draft Purpose & Need

The purpose for transportation improvements along this corridor is to

improve travel time reliability & reduce congestion

along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant

Roadway Deficiencies

Over Capacity

On &

Off Ramp

Lengths

Draft Need

Widths

Shoulder

Traffic congestion from high traffic volumes & incidents

Mobility

Draft Considerations

- Coordinate with local plans & projects
- ▶ Accommodate increased traffic volumes
- Enhance mobility for people & goods
- Improve seismic resilience
- Accommodate future transportation technologies
- Improve connections with area ports & transit

Title VI compliance: SCDOT complies with all requirements set forth by Federal regulations issued by the U.S. Department of Transportation under the Title VI of the Civil Rights Act of 1964, as amended. Any persons who believe that he or she has been discriminated against because of race, color, religion, sex, age, handicap or disability, or nation origin under a program receiving federal aid has the right to file a complaint with SCDOT. The complaint shall be filed with the Title VI Program Compliance Coordinator, at the Office of Business Development & Special programs, 955 Park Street, Suite 117, Columbia, SC 29202 or at 803.737.5095. The complaint should be submitted no later than 180 days after the date of the alleged act of discrimination. It should outline as completely as possible the facts and circumstances of the incident and should be signed by the person making the complaint.

Entry Date	First Name	Last Name	Comment	Response	Response Format	Date of Response
7/15/2020 12:06	Robin	Windham	We need to know how this would directly affect our homes along I-526-my home backs up to I-526 as does many in our Neighborhood and more along on 526	Good Morning Ms. Windham –Thank you for participating in the I-526 EAST virtual public meeting. We are currently in the early stages of this project and are seeking input on what improvements the public would like to see on this corridor through this meeting. We anticipate coming back to the public next year with some preliminary improvement alternatives which will introduce the potential scale of impacts from potential future projects. Please stay in touch with our project team by following us on facebook or twitter for the latest updates.https://www.facebook.com/526Corridor/https://twitter.com/526Corridor Joy Riley, PE, PMP, CPM, DBIA		10/15/2020
7/15/2020 14:27	John	Mitchum	1) How will this project be funded? 2) Will any 1/2 cent sales tax funds be used? 3) Will the agency's funding the project commit to their initial statement that no local 1/2 cent sales tax revenue would be used to fund i526.	Good Morning Mr. Mitchum –Thank you for participating in the I-526 EAST virtual public meeting. We are currently conducting a Planning & Environmental Linkages (PEL) study on this corridor in order to identify the scope and costs of potential improvements projects needed on the existing I-526 corridor between Virginia Ave and Mount Pleasant. Thus, the only project at this time is the "study". Funding has not been fully identified for any potential construction projects that may be recommended from the PEL study. These projects would likely be funded with federal interstate funds primarily since this is an existing interstate corridor. There are currently no commitments by local entities at this time to contribute local sales tax funds to any future projects on the I-526 EAST corridor. SCDOT does not have any control over the decisions by local governments concerning local sales tax funds, those decisions would be made solely by your local governments. If you are really interested in the Mark Clark Extension project which is a project sponsored by your local government and being managed by SCDOT on their behalf, please contact that project team this website https://www.scdotmarkclark.com/.Please stay in touch with our I-526 Lowcountry Corridor project team by following us on facebook or twitter for the latest updates on projects located on the existing I-526 corridor.https://www.facebook.com/526Corridor/https://twitter.com/526CorridorJoy Riley, PE, PMP, CPM, DBIA		7/15/2020
7/15/2020 15:26	s Mark	Gabriel	I heard about this survey from the local newspaper. There should be tighter restrictions on how fast vehicles are allowed to travel on this stretch of highway. The best solution to the congestion is more alternate routes if possible. Considering all the waterways this can be difficult. But any type of alternate route over the Cooper river between the Cainhoy area and Goose Creek/Summerville/airport area would alleviate much of the traffic on the Don Holt bridge. North US17 population is increasing rapidly and the most direct way to get to the airport/North Charleston is 526. This backs up Clements Ferry and Long Point which are overloaded and way behind on development. If there is an accident on the Don Holt it affects almost all of the greater Charleston area.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/15/2020 15:45	Tim	Uttormark	You don't seem to be considering adding a bike lane to the Don Holt and James Edwards bridges, but this project will be the last chance for at least a generation to connect Daniel Island with North Charleston and Mt. Pleasant via bike. If you don't do it now, it will never happen as it won't be cost-effective to retrofit. Demand for it is likely low currently because it is now impossible, but demand for bike commuting and recreation will both increase significantly if it were available. Bike/ped lanes on the bridges would be a small percentage add-on that would significantly future-proof the project.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/15/2020 15:52	! Tom	Stickler	Whatever is done, do not continue the mistake of adding lanes for slower traffic on the uphill to the bridges, only to reduce the number of lanes for the downhill. This is the bottleneck presently, especially when drivers in a hurry speed in the "truck lane", then squeeze back in when that lane disappears after the bridge.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/15/2020 16:42	! Michael	O'Dell	How will the widening impact the end of Hidden Bridge Drive in Mount Pleasant? Would any houses have to be purchased for imminent domain?	Good Afternoon Mr. O'Dell —Thank you for participating in the I-526 EAST virtual public meeting. We are currently in the early stages of this project and are seeking input on what improvements the public would like to see on this corridor through this meeting. We anticipate coming back to the public next year with some preliminary improvement alternatives which will introduce the potential scale of impacts from potential future projects on this corridor.Please stay in touch with our project team by following us on facebook or twitter for the latest updateshttps://www.facebook.com/526Corridor/https://twitter.com/526CorridorJoy Riley, PE, PMP, CPM_DRIA		7/15/2020
7/15/2020 17:11	Jennifer	Murray	What options are being considered for the homes that currently back up to 526 if the interstate is widened? We will ultimately be affected by increased traffic noise; are sound barriers going to be built?	Good Evening Ms. Murray –Thank you for participating in the I-526 EAST virtual public meeting. We are currently in the early stages of this study and are seeking input on what improvements the public would like to see on this corridor through this meeting. We anticipate coming back to the public next year with some preliminary improvement alternatives which will introduce the potential scale of impacts from potential future projects. Keep in mind that this is a planning study and will give our agency the information they need to understand the scope and costs of potential improvements projects. Noise analysis would not be performed until a project was funded and advanced for environmental approvals.Please stay in touch with our project team by following us on facebook or twitter for the latest updates.https://www.facebook.com/526Corridor/https://twitter.com/526CorridorLet us know if you have any other questions or concerns.Jov Rilev. PE. PMP. CPM. DBIA	Email	7/15/2020
7/15/2020 17:29	GREGORY	WEST		Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/15/2020 19:00	Anthony	Munoz	Why don't you close the on ramp from highway 52 to 526 now that you can access 26 and 526 from Remount Rd.Also one reason for the congestion is cars and 18 wheelers slow down or stop in the left lane to be able to get to the I26 on ramp. Thank you.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/15/2020 19:26	Paul	Lykins	Please study an interchange and roadway to directly access the Wando Welch Terminal. Request the State Ports Authority to help fund it. Study the need for a multi use pedestrian facility on this project.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/15/2020 22:52	. Keith	Zimmerman	Instead of expanding 526 why not put a new connection from the Huger area off 41 to the Goose Creek area. This would divert significant traffic volume from central Mt Pleasant area	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/15/2020 23:36	WOODROW	BLIZZARD	SCDOT need to address another Mt Pleasant/ North Charleston access, another connection bridge up i-26 toward Goose Creek, allowing traffic to bypass i-526. more growth is inevitable for this area and the proposed 526 expansion will not solve the problem. Remember Northbridge ,then i-526 and now we need to add another access/exit toward Summerville.we can only grow up i-26. Also the Leatherman terminal will soon open and that traffic will add to the congestion on i-26 and i-526. Spend the money on a solution not a band aid.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

Entry Date	First Name	Last Name	Comment	Response	Response Format	Date of Response
7/16/2020 0:16	Mark	Fox	I thing the 526 East project should be prioritize over the West because of the SPA Wando and new North Charleston terminals. Additionally improvements on the Long Point Rd to 526 on ramps could be optimized to increase traffic flow and reduce pollution and fuel cost. Making a dedicated 526 on ramp that would service both East and West Bound 526 traffic. The ramp would need to be segregated from the Long Point Road traffic with a barrier. This would allow Trucks to bypass the off ramp traffic light and save fuel by removing the second traffic light for truck traffic. Only traffic continuing on Long Point Road would have the traffic light from the East Bound off ramp.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/16/2020 17:54	Matthew	Gill	I am not sure why it isnt feasible to just add another lane. If you ignore the current lane markings for a inute and just look at the amount of space from shoulder to shoulder, there is room to make three lanes without a shoulder. Sure a shoulder is nice to have, but it is not a necessity at all points. You could make these changes in a weekend for just the cost of lane markings! It seems there is always this huge project involved and the construction drags on forever! Go look at the available room and you'll see that by shrinking the left shoulder and increasing the right shoulder, you have room for three lanes. That works for most of this stretch of road. Thanks, Matt Gill	Mr. Gill –Thank you for participating in our I-526 EAST virtual meeting. SCDOT did perform an extensive investigation into restriping the I-526 section between I-26 and Clements Ferry Road to provide 3 travel lanes in each direction with loss of shoulder. In the required Highway Safety Analysis we performed this indicated a significant safety risk and predicted increased crashes with this sceanrio. Due to the high risks of serious injury and fatal crashes with this configuration, the alternative was eliminated as not feasible. Inadequate sight distances and the inability of the existing infrastructure to support installation of overhead land signals along this corridor were also part of this decision.Let me know if you have any other questions or concerns.Joy Riley, PE, PMP, CPM, DBIA	Email	7/16/2020
7/17/2020 0:23 .	Jeremy	Bollington	What is the plan to reduce noise pollution - its bad now in our neighborhood will become much worse with the predicted growth. Is there a plan to install some form of sound barrier ?	Good Morning Mr. Bollington-Thank you for participating in the I-526 EAST virtual public meeting. We are currently in the early stages of this project and are seeking input on what improvements the public would like to see on this corridor through this meeting. We anticipate coming back to the public next year with some preliminary improvement alternatives which will introduce the potential scale of impacts from potential future projects on this corridor. Any noise analysis would be performed in the future during final environmental document approvals once projects are funded as a result of this planning study. The Planning & Environmental Linkages Study (PEL) allows us to better understand the potential project scope and costs as we also get credit for environmental work moving forward prioritizing and funding future project packages.Please stay in touch with our project team by following us on facebook or twitter for the latest updates.https://www.facebook.com/526Corridor/https://twitter.com/526CorridorJoy Riley, PE, PMP, CPM, DBIA	Email	7/23/2020
7/17/2020 11:59	Earl	Triplett	TRAFFIC SEEMS BOTH HEAVIER AND FASTER WHICH MULTIPLIES THE NOISE FACTOR. WE HAVE TO KEEP A FAN RUNNING IN OUR BEDROOM YEAR ROUND TO DROWN OUT ROAD NOISE. WE WOULD LIKE TO SEE A SOUND WALL BUILT ON BOTH EAST AND WEST SIDES FROM HOBCAW CREEK TO THE 17 INTERCHANGE	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/17/2020 15:28 (Cindi	Sanders	I'm interesting in knowing how this project will impact my neighborhood since we are already so close to I526. I live in Marsh Point at Etiwan off Longpoint Road in Mount Pleasant. I'd also like to know if a sound wall will be built in that area? When will that information be available?	Good Morning Mrs. Sanders Thank you for participating in the I-526 EAST virtual public meeting. We are currently in the early stages of this project and are seeking input on what improvements the public would like to see on this corridor through this meeting. We anticipate coming back to the public next year with some preliminary improvement alternatives which will introduce the potential scale of impacts from potential future projects on this corridor. Please stay in touch with our project team by following us on facebook or twitter for the latest updateshttps://www.facebook.com/526Corridor/https://twitter.com/526CorridorJoy Riley, PE, PMP, CPM, DBIA		7/23/2020
7/17/2020 21:12	David	Ruef	Wife and I agree with Charleston Moves' position that there needs to be public transit, bike and ped options in DEIS and that local neighborhood impacts need to be considered more highly they have suffered enough and while I of course drive my car, I will take the inconvenience of traffic congestion (i know, pollution is negative) in order to be more environmentally just. Thank you.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/18/2020 15:25	Darrell	Downs	We live in the Etiwan neighborhood and have recently negatively impacted by the noise from the 526 after the clear-cutting and brush cleaning along the corridor. As a community we are now taxed with finding solutions to not only the added noise but headlights shining in our homes. When homebuyers come to view a property for sale, the 526 noise is always a concern and often a deterrent to potential home buyers. Added noise is going to be a major concern for our community and many others if the 526 is widened. Consideration for our property values and quality of living are necessary. Responsibility and solutions to protect the impacted neighborhoods need to be included in the budget and planning of this project. Solutions such as a sound barrier wall, plantings, or other proven remediations that will provide protection to the neighborhoods must be a part of the plan.		Email	10/15/2020

7/20/2020 16:31	Mark	Todd	Need an expressway from Jedburg to Mt Pleasant and to Hollywood. Greatly reduce truck traffic at the interchange and on the Don Holt and Wando bridges. Trucks have to slow down to make the on ramp to Mt. P - backs up regular traffic which can move through and merge at greater speeds. Too many cars arriving at that spot - bottleneck isn't the word for it. You have got to get the trucks away from it to get anything to work. Your current plan addresses needs now but doesn't look at 2030 which is when most likely everything will get close to being done.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/25/2020 19:26	Eddie	Bostic	The hwy creates many issues worthy of discussion but the two primary issues are 1. Please address the concerns for noise control for the residents along the Hobcaw creek area. We have tried masking noise technology, vegetation, but the noise level is so high that having a conversation in my yard is not possible. 2. Growing numbers of trucks threatens these residential traffic. The port is the largest contributor whose influence creates an environment of a commercial industrial site and the two are risky for residents. Means to separate these two logistically via separate exit and merging ramps would help.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/27/2020 16:18	Amy	Giove	Increased traffic over the years has resulted in excessive noise and congestion. Would recommend sound barriers along 526W at Daniel Island - they're really needed. Also need solutions for increased truck traffic due to the Long Point port. That's the main source of congestion on 526E. On 526W the North Rhett exit needs to be improved so traffic doesn't back up on the highway. Trucks need to be required to actually use truck lanes.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/28/2020 12:41	Janie	Borden	My number one concern is that consideration will be given to balancing the needs of both motorist safety as well as the livability of the surrounding neighborhoods that wrap around this corridor. It would be greatly appreciated if any expansion would also include the installation of sound barriers or noise dampening walls.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/28/2020 20:47	Doug	Surrett	Road noise from 526 is an issue today and getting worse with the increase in vehicular volume. Sound barriers and sound dampening road surfaces need to be part of the improvements.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

7/28/2020 22:35	Patricia	Stuckey	I never receive notices conserning meetings. I own 2156, 2162 an Buren St and 2203 and 2205 Margaret St email stuckeypat389@gmail.com 843-270-5541	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/28/2020 23:14	Anne	Surrett	While 526 needs major design improvements, I want to make sure Road Noise is addressed in any solution. Additionally trucks should be required to stay in a designated lane.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/29/2020 0:31	Lisa	Lehman	ALL trucks traveling to and from the port on 526 MUST remain in the furthest right lane from the I-26 and 526 split to Long Point Rd. It can be done with electronic signs at regular intervals with the message that hefty fines (\$) will be imposed with the tickets. And then the State must enforce it with a heavy presence of police officers along 526. This can be a "work around" until extra lanes are added!! Plus, a concrete barrier needs to be installed on Clements Ferry road for approximately a 1/2 mile from the exit ramp going onto 526 West. This will ensure that drivers will not be able jump into the front of the line (at the traffic light) by cutting off a line of cars entering the ramp to 526. This situation causes many accidents on this spot at 526 and subsequent back ups!!	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/29/2020 16:13	Brad	Brooks	It appears to be clear from the 2050 projections we need additional lanes. But before this happens, my biggest concern is safety. Moving from Pennsylvania our insurance premiums have risen by \$200/year, simply because people do not know how to drive safely regardless of race, gender, or age. Drove by an accident on 526E where the car was on fire, and lanes on 526W were at a stop due to rubberneckers and people literally getting out of their cars to take video instead of assist with the accident (and emergency vehicles were delayed getting to the scene due to rubberneckers). Another accident killed a tow truck driver and critically injured a deputy, all because a driver in a POV was driving in the truck lane instead of one of the left two lanes. As far as I know the driver hasn't even been charged with anything, this is unbelievably reckless. It needs to be clear that the truck lane is for trucks only, and trucks need to utilize this lane (when it's not congested) instead of taking up the left two lanes. Install video cameras along the corridor to start mailing tickets to bad drivers, these tickets will pay for the cameras in no time and there will be additional money to fund other projects. Or else there will be no tickets but safety will be enhanced and who is not okay with that? I am not concerned about the noise level near Daniel Island, and the drivers on Daniel Island are just as bad as those on 526.	Thank you for your comments. I did want to note that SCDOT is not authorized with the responsibility or powers for traffic enforcement, that falls under the control of the Department of Public Safety. One other item to note is that video enforcement and ticketing is not currently allowed in SC, and legislative action would be required to allow this tool to be utilized. These are all valid concerns, and I would encourage you to contact your local legislative representative on these issues. Just wanted to make sure you were aware that most of these concerns are not within the Power of SCDOT to control or change. Our purpose is to provide safe and efficient roads and improvements that reduce congestion will reduce the number of crashes and hopefully also reduce the frustration that sometimes leads drivers to make bad decisions or errors contributing to crashes. I will add one note of positive feedback, in the I-526 WEST project which extends to Virginia Avenue (and is funded for construction), we are currently proposing to connect the widening to the existing truck lanes. Thus where the truck lanes start now travelling WEST, would be the widening out to 3 lanes in each direction and then the corridor will widen out even further to 4 lanes in each direction at North Rhett. We are also proposing to modify the North Rhett Interchange. These changes will convert the truck climbing lanes into connected general purpose travel lanes and should provide a significant improvement in operations on the EAST corridor while these future projects are funded and constructed.Please let me know if you have any other questions or concerns.Joy Riley, PE, PMP, CPM, DBIA		7/29/2020
7/30/2020 16:35	James	Morrill	I have been through the website and I don't see where the traffic noise is being addressed. Where does this occur? As you know, we have several hundred people who signed a petition to be sure sound barriers and quiet concrete are used on I-526 when it passes Daniel Island. I have many questions and would like to know what is the best way to submit them. thanks Jim Morrill	Good Afternoon Mr. Morrill –Thank you for participating in the I-526 EAST virtual public meeting. We are currently in the early stages of this planning study and are seeking input on what improvements the public would like to see on this corridor through this meeting. We anticipate coming back to the public next year with some preliminary improvement alternatives which will introduce the potential scale of impacts from potential future projects on this corridor. 7/30/2020 18:05	СР	Chappell	I support Sen. Larry Grooms proposal to widen to 4 lanes (2 in each direction) and add the new port connector road.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
7/31/2020 16:55		Hemphill	Please, please include bicycle and pedestrian facilities into the roadway improvements for this project. People die every year just because they don't have the privilege of owning a car. Building these facilities improves property values, has positive health benefits, and better connects people to their communities. You are transportation planners and traffic engineers, you know we can't widen our way out of the traffic problems in our area. We need more mode shift. Prioritizing safe bike and ped facilities can change the lives of people in our community!	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/1/2020 16:06	Chris	Hayes	Insanity is defined as doing the same thing and expecting different results. While there are definitely short term improvements that can be made in this area, the idea of a major project to "widen" this section over the next few years will only perpetuate the problem - see history of I405 through LA! Better that we try something different like spreading traffic across the 24 hours in a day. How about the Port going to a 7PM to 7AM schedule? Paying workers a shift differential would be a lot cheaper than the billions involved in widening! This would get congestion inducing trucks off the road during peak times. How about incenting local employers to go to staggered shifts? and / or work from home? In the meantime, folks like me will try to avoid periods of heaviest congestion.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/1/2020 19:06	Aaron	Holladay	I would like to see noise barriers along 526. Particularly in the vicinity of long point road. Increasing truck traffic has made noise unbearable at all hours of day. Any improvement plan should include this.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/2/2020 12:30	Philip	Cavatoni	Having participated in some reviews and completed the on-line survey. Would like to submit the following comments. Two big issues on 526 that need shorter-term addressing are the speeding/reckless driving that is rampant and the quality of the interchanges (particularly I26). Our plan moving forward will hopefully address these two issues and would like to understand further what the plan is for those two issues. I have not followed as closely as I should have the work to date, and will do so going forward and appreciate the opportunity to provide feedback through the survey and the this questionnaire. Thanks,	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/2/2020 18:45	Ben	Whatley	My main concern is the large amount of noise from traffic. The noise is already extremely loud, and widening will only increase the noise by making it louder and also noise for longer periods. There must be a sound barrier installed in order to mitigate the noise	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

8/4/2020 0:26	Jackman	Frailey	I hope this project moves forward to widen the highways in both directions and solve issues with trucking and the bridges. However, if there is no sound wall put in place I am totally against the project. The sound wall is crucial not only to property values, but also to maintain the majesty of the lowcountry. Fewer people will want to travel or live here if you can hear the highway for miles in any direction. The sound wall is an absolute must.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/4/2020 15:15	Patrick	Snodgrass	Please consider sound barriers from Long Point up the Wando Bridge until over water.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/4/2020 15:44	George	Maynard	To answer the question (How did you hear about this meeting) Studying SC History. Planning of the freeway dates back to the 1960s. I retired to SC 1974 there has been a lot of ideas bounced around by the media and only slow or no progress in the right direction. Politically controlled progress operation as Presidental Election nears. Have to make people believe we are doing our job while traffic is usually at a standstill or moving slowly.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/4/2020 15:50	Hartley	Hartman	I live in Etiwan Pointe and the highway noise is already extremely loud as we are very near 526. The constant rumbling of the cargo trucks shakes our house at all hours of the day. I strongly encourage that if the highway is to be expanded that there be some sort of noise barriers put into place to reduce some of the noise. I cannot imagine what the sound would be like if the expansion goes through. Thanks.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/4/2020 16:21	Elizabeth	O'Boyle	This stretch of highway is already very noisy and intrusive to many communities nearby. If it were to be expanded, the noise levels would be even more disturbing and decrease the quality of living in so many neighborhoods as well as decrease the property value. If expansion is necessary, then sound barriers should be installed to protect surrounding neighborhoods.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/4/2020 18:24	Eric	Lehman	Permanent Truck lanes needed on Don Holt. Also, cameras to catch speeders and reckless drivers	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/5/2020 2:13	Harriette	Buckenham	The currently existing I-526 needs repairing, particularly the bridges, and expanding. It is no longer serving the needs of the public. These repairs and improvements should be done before adding additional traffic by expanding the problems already existing. One of the most effective improvements would be to slam the brakes on the developers and builders! Get rid of greedy politicians pocketing money for land sales and approval of building permits: shameful. The rate of growth and the clearing of our forestthe destruction of marsh areasdisgusting and tragic. Once they are gonethey are gone forever. The developers could not care less. They pocket their money, head out of SC and never look back.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/5/2020 16:04	Hilton	Caston	My MD is on Long Point Road. The trucks are ruining the area. The road will shred into pieces and more wrecks will occur. I suggest building an elevated semi trucks only ramp to connect to 526.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/5/2020 16:36	Jim	Slonecki	Two comments: 1) Eliminating, minimizing, or moving the port truck traffic to and from Wando terminal would improve I526 and Long Point Road (Use a Rail connection, add new entrance to I526, or use barges to move containers to new North Charleston terminal for rail to upstate etc.) 2. Widen I 526 (adding 2 more lanes to a total of 6 from Hwy 17 to I 26 interchange would eliminate improve flow at minimum cost (bridges are already set up for 6). Stopping any improvement at Virginia Ave is short sighted and would just add a new bottleneck. There are several projects currently underway regarding Long Point Road that could be avoided it these other options are considered, plus funding these options should fall mainly on the SC Port Authority, since they create most of the dangerous traffic conditions.	· ·	Email	10/15/2020
8/5/2020 21:26	Gene	Grygielko	Merging onto 526 from DI some people get up to 526 and just stop instead of keep moving to merge in. I was up in Vancouver Canada. They had signs on highway before on coming traffic and signs coming into highway showing a zipper and how cars should merge.taking turns. May not seem like a big move but the traffic did not back up getting on and the traffic moved more smoothly On the highway	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/5/2020 22:55	Nelson	Winter	We frequently travel the I-77 corridor through Charlotte, NC. For years we experienced construction delays as two new lanes were added in each direction through Charlotte metro. We took this in good humor with the expectation that the additional lanes would ease congestion in future travel. When the new lanes were finally opened, our reaction was anger and dismay at the unbelievable stupidity of the solution. Instead of 5 lanes of traffic in each direction as we had anticipated, there are the same three congested lanes as before alongside two new virtually empty express lanes for millionaires. In other words, years of construction and millions of dollars were totally wasted for an idiotic non-solution that could only appeal to a Washington bureaucrat. Reading the panel on your site entitled "What are we hearing from the I-526 LCC EAST survey", I was shocked to see that you believe your survey so far indicates that "High Occupancy Toll (HOT)" is a so-called "improvement" that most people want to see along the corridor. That is absolutely false. You never in your survey use the term "High Occupancy Toll." You ask people to rank items, one of which is "HOV/HOT." People know what HOV is. They may even see it as a valid solution for the I-526 corridor. However, the way your question is constructed, there is no way a respondent can endorse HOV without also apparently endorsing HOT. That probably doesn't trouble many people, as it does me, because they have no idea what HOT is. Ido know what HOT is. I've seen it do nothing to solve Charlotte's problem, and I am confident it will do nothing to solve the problems of I-526. If you are determined to bring it here, there is probably nothing the public can do to stop the lunacy. However, don't believe for a moment that you can get away with citing your survey as an endorsement of HOT. To get that honestly, you would first have to clearly explain what the acronym HOT is, and then ask people directly if they really would like express lanes limited to those who can afford to	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/6/2020 14:32	Marilyn Bache	Sonnenberg	While I think Senator Larry Grooms proposal is the best of options offered, I personally think it is too late and does not take into account the impact on Mt Pleasant or any of our coastal cities. Instead I urge consideration of a new outer belt line (1726 or 1826) which could connect to the ports along the Cooper River and both the northern and southern coastal cities. As it is now commuters are clogging 526 at rush hour to access developing coastal communities (see Larry Grooms Mail out) both along Hwy 17 to the north and south of Charleston. Commuters are cutting through established communities and along scenic highways, forcing the widening of Hwy 17, and tourists are overwhelming our beach communities. Interstates can be constructed across the wetlands with no access in protected areas and still get trucks to North Charleston terminals, rural (still) coastal communities and developing areas.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/6/2020 15:43	James	Atkins	Current traffic on 526 requires that a sound barrier wall be erected btw the roadway and Hobcaw Creek Plantation subdivision. Widening to 8 lanes will only increase the noise and the need for a sound barrier wall.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/6/2020 17:48	shane	sandusky	all of the property owners south of I 526 on St. Thomas Island would be agreeable with providing 50 ROW to continue Clements ferry to the Daniel island bridge with a junction on the southern tip of DI (SPA controlled). Call me to discuss. 8434379310 Shane	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

8/7/2020 1:13	JEFF	GRAY	Expansion of roadways and traffic volume especially freight traffic MUST include road noise mitigation for neighborhoods adjacent to I-526 to maintain property values and quality of life.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/7/2020 16:42 1	ichard	ulstad	This is "the greatest expansionthat the SCDOT has ever attempted" and it will require the longest range planning that they have ever made. We need to recognize that roads don't just move traffic, they more importantly determine future growth. The communities that must not be overlooked, most importantly for the long range, are those that will actually benefit from the growth that this "greatest expansion" can create. The other communities that will see a reduction in traffic pain are significant, but not as important as the longer range consequences of investments in growth. We must consider our "greatest expansion" as the "Oregon Trail" of Charleston's development. Our first responsibility is to add the developmental needs as our primary objectives and then review the new PEL study. Although it is simple to just "double what we have" it would be negligent to ignore the potential of adding to our new "Oregon Trail" while rebalancing ports and growing neighborhoods. 75 years from now there may be a second larger beltway around Charleston in addition to the existing l-526. The point is we don't need a 'greater project', we need and I support a better directed project for the long range development of all of metropolitan Charleston. I am AGAINST (do not support) plane old widening of I-526. I do support investment in our contribution to Charleston's Oregon Trail!	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/8/2020 19:45	Иark	Lowman	From my point of view their are at least three issues of concern. First, the truck traffic is heavy and will continue to increase. Second, the amount of noise generated by the LCC is an impact on several residential areas. Third, and most important, the number of accidents on the LCC is much higher than it should be. All three issues should be addressed by any plans to improve the LCC. The safety issue is only going to become more pronounced with the increase in traffic at the Wando Welch terminal. The ideal solution would be to create truck only lanes in both directions between I-26 an Long Point Road on the LCC and prohibit vehicles with more than three axles from the lanes closest to the center of the highway. Having a dedicated exit lane for trucks exiting the eastbound lanes of the LCC at Long Point Road would also improve the flow of traffic and safety. Even with three lanes in each direction, the enforcement of lane usage is an important factor in reducing traffic accidents. Current traffic patterns encourage vehicle operators to misuse climbing lanes and there is frequently truck traffic in the center lanes that can lead to unsafe differences in vehicle speeds between Rivers Avenue and Clements Ferry Road. Finally, the noise of the LCC is an issue for all residential areas between I-26 and US 17 in Mount Pleasant. The clearing of trees and brush along the LCC in the clear zones, especially between the James B. Edwards Bridge and Long Point Road, has worsened conditions for property owners nearby. Widening the LCC without mitigating the noise will impact quality of life and property values. Reasonable measure to reduce noise impacts should taken immediately. In the longer term, any new construction should include noise barriers and other reasonable measures to reduce noise impacts.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/9/2020 15:02 .	Joseph	Thomas	I live at 19 Dalton Street. The vehicle noise from I-526 is unbearable throughout the day, and especially in the morning. I cannot enjoy the routine activity of sitting outside on my porch. The loud, sharp noise from freight trucks traveling westbound is especially alarming as they traverse what sounds like expansion joints located at the bridge at Beresford Creek. When sleeping, I have to turn on a noise machine, which is a safety issue for my family since it could "mask" other sounds that might be life-threatening events. As I travel across the country, it amazes and frustrates me that SCDOT has not constructed vertical noise barriers as other states have done along Interstate roads where dense neighborhoods are close by.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/9/2020 16:18	Chris	Blundy	New road will need noise mitigation and sound barriers	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/9/2020 17:07	Dena	Johnson	the need for road noise mitigation, sound barriers and quiet pavement	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/10/2020 17:09	Christopher	Alex	We are very concerned with noise mitigation. Adding a lane to 526 along with tree removal for development has increased road noise impacting quality of life.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/10/2020 20:59	Gloria	Grimsley	Do not need widening in Mount Pleasant, there is no room and there would be many lawsuits and much pain.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/10/2020 21:41	Kris	De Welde	Thank you for the opportunity to provide feedback on this important project. While I am supportive of improvements to our infrastructure, and particularly those that will encourage bicycling and use of (also improved) public transportation, I want to express concern for the ways in which the project will differentially impact minority and poor communities along the corridor. Displacement and negative environmental impacts must be mitigated in order for this project to be "successful." Equity must be at the center of decision-making for this project or we in the tri-county area will simply perpetuate the decades (centuries!) of violence and looting of Black and other minority communities that is a hallmark of "development" and seen far too often our history in SC. Representatives from the most impacted communities must be part of the conversations in a meaningful and authentic way, not just in a "check the box" sort of way. In this historical moment in particular, such a project must reflect the full inclusion of Black, brown, indigenous and other people of color, and especially women who are often heads of households. Anything less is blatant, willful perpetuation of systemic oppression!	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/11/2020 11:11	Kathleen	Gilliland	There are several safety issues that need attention ASAP. The first is speeding! Cars use the "truck" lane for passing at a high rate of speed - probably at least 80 Mph. This issue should be addressed NOW. The second is there is no where to pull over if you are having car trouble. This is a recipe for disaster - as we have seen recently - especially with cars traveling at excessive speeds. Also, the number of trucks is overwhelming!	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/11/2020 19:12	_arry	Grooms	I support the 526 East project and ask that it include; 1. Expansion to 4 lanes in each direction, 2. A dedicated port access road to connect the Wando Terminal directly to 526, 3. And sound barriers and other noise reducing measures.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/12/2020 16:55	Michael	Petrakis	Please provide road noise mitigation, sound barriers and quiet pavement to protect Daniel Island residents impacted by this project.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

Entry Date	First Name	Last Name	Comment	Response	Response Format	Date of Response
8/12/2020 19:21	Alan	Townsend	As it pertains to trucks accessing the Wando Welch Terminal, suggest adding a dedicated direct access to the terminal's rear gate (north gate) at the end of Shipping Lane from I-526. The I-526 east bound traffic would exit on a one-way flyover of Wando Park Boulevard in bound to the port and return on a one way out bound flyover of Wando Park Boulevard to west bound I-526. Since it is not a "full" interchange, perhaps the separation requirement from the interchange at Long Point Road would not apply. If it does apply, the in bound traffic to the port could access via this new aforementioned flyover and the outbound continue as it does currently on Long Point Road. Since the predominate truck in-bound movement is east bound on I-526, truck traffic entering the port from west bound I-526; which is less predominant, could continue to enter as it currently does via Long Point Road. This option would help limit the stacking of in bound trucks on Long Point Road.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/12/2020 20:41	Mark	Smith	Please make sure these three elements are included in the plans moving forward to protect the quality of life and safety of all area residents: 1. Sound barrier/noise reduction elements all along the residential area that covers the entire area of Daniel Island located underneath the raised lanes of I-526. 2. A dedicated truck exit and lane for port traffic for the Wando Terminal. 3. A minimal of 8 lanes of open traffic flow for the entire I-526 east area under review. Please also make sure all existing, planned and approved housing units along the Clements Ferry Rd corridor are included for proper level of service for the exit/on ramps, that will allow continuous flow of traffic.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/13/2020 11:38	3 Richard	Stuhr	There is an abundance of container trucks that travel 526. Have alternatives been examined for moving these containers between rail and port terminals? What about barges? Also, it is past time to allow for pedestrian paths along ALL roads. I am tired of having to take my life in my hands every time I wish to walk or bike around the Charleston area. Also, a comprehensive ferry service for people could make use of our extensive waterways and be a more enjoyable mode of travel.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/13/2020 12:14	I Leslie	Groher	Of the Daniel Island Natural Resource Association recommendations, I support the relocation of the Wando Terminal to the spoils landfill island west of Clouter Creek or to an alternate location in Jasper County AS PREVIOUSLY PROMISED. This will obviate the need to address a reversible lane which will only add to dangerous lane changing and speeding as drivers jockey for position on what is a static size of the existing bridges. Adding new bridges to handle traffic would be unnecessary if the terminal is relocated AS PREVIOUSLY PROMISED. in any case, new bridges would be incredibly costly, money-wise and quality-of-life-wise, to tens of thousands of local home dwellers and businesses which have invested in this area. If any lane expansion is called for, it is to create a trucks only lane between the Wando River bridge and Long Point Road. If that is deemed to be impossible, rework the Long Point Road exit ramp to allow more lanes turning toward the terminal. Of course, this need only be a temporary measure if SCDOT relocates the Wando Terminal AS PREVIOUSLY PROMISED. Since natural sound barriers (ie:trees) along the eastbound and westbound portions of 1526 inexplicably have been removed, new sound barriers should be created. A consequential investigation and full public disclosure as to who approved said removal should be made as the removal not only must have significantly impacted the quality of life for residents and businesses immediately adjacent to the scarred areas, the uglified landscape will cost all South Carolina taxpayers to restore. Other than necessary sound barriers' restoration and enhancement, beautification would be nice, but a low priority for expenditure of scarce funds. Lastly, allocation of money to build bicycle and pedestrian bridges or tunnels crossing the Cooper and/or Wando Rivers would be an inefficient expenditure of public money that should be spent to maximum benefit of the current and projected population of Daniel Island, Thomas Island, the Cainhoy area, as well as all trav	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

I-526 Lowcountry Corridor EAST PIM1 VPIM Comments

Entry Date	First Name	Last Name	Comment	Response	Response Format	Date of Response
			years. I am very familiar with these roads. Here are my concerns with widening I-526. - There is no room to widen—in a non-disruptive way—I-526 westbound on its north side (i.e. the breakdown lane side) between Long Point Rd and the Wando			
			River. The neighborhoods of Belle Hall and especially Tidal Walk are already right up against I-526, as is Seacoast Parkway, the only access road for Tidal Walk and Grassy Creek neighborhoods. - A large amount of I-526 traffic enters and exits I-526 at Clements Ferry Rd and does not reach Mount Pleasant. So I-526 capacity from Clements Ferry Rd to Hwy			
			17 should not need to be as large as from Clements Ferry Rd through Virginia Ave.			
			- This is not simply a "widening." Since 65% of the east I-526 corridor is elevated, this will involve building miles of bridges, a massive expense. - Widening I-526 would not appear to alleviate any congestion on I-26 between the I-526 interchange and Ashley Phosphate Rd. There is already an incident on this stretch of I-26 almost daily, which causes massive delays.			
			- Mount Pleasant, especially the southern half of the town, is very close to population capacity. One would not anticipate a large increase of commuters to and from this side of Mount Pleasant in the coming years. An ideal traffic solution would get other commuters to their destinations without needing to traverse this already congested area of Mount Pleasant.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
			- Currently, commutes to North Charleston, Summerville, Goose Creek and surrounding areas from northern Mount Pleasant and Awendaw must utilize the Don Holl Bridge and typically the I-526/I-26 interchange. Widening I-526 will not change that and increases in traffic volume will still be felt on Hwy 17 and Long Point Rd, both of which are significantly congested during rush hour. On the other hand, the extension of Red Bank Rd east over the Cooper River, with a connection to Clements Ferry Rd, Cainhoy Rd or Hwy 41, might provide these same commuters a similar or shorter trip that avoids both the I-526/I-26 interchange and the Don Holt Bridge. This proposed roadway would seem to require less bridge/elevated roadway distance and possibly less height. Additionally, both sides of Red Bank Rd from N. Rhett Ave/Henry E. Brown Jr. Blvd to the Cooper River have wide tracts of unoccupied land.			
			- As someone who lives very close to I-526 in Belle Hall, I do not believe sound barriers are worth the expense or the aesthetic appearance. Many of us are trying to avoid Mount Pleasant looking more "urban," which barrier walls do. My main noise complaint is the very small percentage of port-destined trucks that utilize the engine brake—often between 4am and 6am—when approaching the Long Point Rd off-ramp. This is not necessary since the overwhelming majority of trucks do not do this since there is a merge lane on Long Point Rd so they do not have to stop at the intersection. A more direct connection between I-526 and the port sounds interesting but other than the few early morning engine brakes, would not appear to be worth the expense either.			
8/13/2020 20:25	Michael	Lawrie	- While not a replacement for infrastructure improvements, it would seem much more could be done about incident management on these roads. At this point, it is a near certainty that a vehicle will become disabled on I-526 or I-26 at some point between Clements Ferry Rd and Ashley Phosphate Rd. What should be minor			
8/14/2020 1:46	Alexandro	Dell'Aiera	We really need to finish the 526 project and connect Johns Island to West Ashley and James Island. A perfect example is last year when the Stono Bridge from James to Johns island closed three times in four weeks. Traffic was crippled in the entire metro area. It took everyone hours to get home those days. If 526 was completed, there would have been another way for people to commit to alleviate the strain of traffic that already exists on Savannah highway. This project has needed completion for a long time, and the time is now. Thank you	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/14/2020 13:35	Courtney	Morrill	The survey does not address the major concern of residents on Daniel Island. That is road noise. For this project to go forward, it must include measures to block or prevent the noise from interfering with the quality of life on Daniel Island. I don't understand why this item was not included in the survey. With the addition of more traffic lanes and vehicles, the noise will increase from the current unacceptable level. Please address this issue.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/14/2020 17:12	Shawn	Howell	I am a 7.5-acre property owner (TMS #271-00-02-07,131,133) at the corner of Forrest Drive and Hwy 33 (I-526 interchange). I have been told in the past that there will not be a light at this interchange. Currently, there is only a right in and a right out at this site. At a minimum, there should be a left turn into the site and a reasonable distance for a u-turn up Clements Ferry rd to get back to the I-526 on-ramp.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

8/14/2020 18:07	William	Kelley	Something must be done about extreme noise from road and bridge.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/14/2020 19:26	Kimberly	Groher	It is folly to widen the I526 freeway which will continue to feed bridges that cannot be commensurately widened. Have you ever tried to cross one of those bridges at rush hour? Likewise ill-advised is the center median smart lane. The idea of increasing the volume of traffic on more lanes that will squeeze onto the bridges is completely crazy. Limiting the trucks to right lane only would be okay, but it would be better for them if there were a dedicated lane to the port exit, as well. Using Department of Transportation money to build bridges or tunnels for bicycle riders and walkers is not a good use of those many, many dollars. There should be a cost benefit study identifying the cost per user compared to spending the money to improve roadways for tens of thousands of drivers. The same goes for beautifying the landscape. That should be done only if and after adequate roadways and maintenance of the roads is complete.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/14/2020 22:38	Robin	Schoepfel	I feel the road noise situation needs to be taken care of. The noise from 526 can be very loud and has gotten louder every year. Sound barriers and quiet pavement would help with this.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
			I would like to know more about how it will impact the neighborhoods adjacent to the corridor.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020

8/15/2020 20:08	B Emily	O'Hearn	Please include plans for bikes and pedestrians. We all want to use this bridge! If you're going to make infrastructure improvements, make them for everyone- not just those riding in vehicles. If the infrastructure was available, we would certainly all use it.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/14/2020 14:32	2 E. Mac	McBride	The widening of 526 East is need, but will increase the noise level for residents'. The road noise is having a negative effect on quality of life issues for Daniel Island residents and I am sure other neighborhoods experience similar problems. Measures must be addressed to mitigate the noise. So called quiet payment and/or sound barriers must be part of the road widening plans.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/12/2020 3:09	9 Charles	Shuford	Commuter traffic is heavy, but a significant improvement would be the reduction or elimination of truck traffic. Regretfully, a major transportation problem with the East I 526 Corridor is that the Mt. Pleasant port is not connected to the rail system that serves the Greer inland port and other designations. Thus the congestion on I526 from Highway 17 in Mt. Pleasant to Virginia Ave in North Charleston. Moving the port would be a major traffic improvement but likely an impossibility. If expanded or new bridges are necessary along this corridor, a rail line should be included. If a new bridge is considered, think of a railroad bridge from Mt. Pleasant port to North Charleston perhaps using the southern tip of Daniel Island, which is owned by the port authority. Lastly, the survey did not allow me to complain about noise. There should be a noise barrier along I526 from Highway 17 to Cooper River Bridge, not just while the road is at ground level but also along the bridges.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/11/2020 17:59	a Freeman	Milligan	Below is a comment submitted to SCDOT for it's Statewide Multimodal Transportation Plan (MTP) update: While future technologies are difficult to predict, they can (and will) have significant impact on transportation as we look forward to 2040. In particular, I hope the impact of moving from gasoline to all-electric vehicles is being thoroughly considered. One emerging technology that SCDOT needs to have on it's radar screen is induction/wireless charging lanes in highways, in which vehicles are charged while in motion. This is being developed in several places around the world, and I would not be surprised to see it available within the next 5-10 years. This would appear to be a win-win for everyone; making EV transportation more practical, reducing the battery storage necessary, powering transportation with clean energy, providing an income stream (from the sale of the electricity to motorists) for the construction and maintenance of the induction facilities (and maybe have \$\$ left over for other highway funding), etc. Web apps could be used for tracking electricity consumption and for billing/payment. The length of charging lanes necessary and their frequency will depend on local traffic patterns/needs and the charging rate that can be achieved. Since we have Volvo at one end of I-26 in South Carolina and BMW at the other, maybe they would be interested in sponsoring an effort to make I-26 one of the first electrified roads in the U.S.! Electrified roads could also be applied to paths for the electric bicycles, golf carts, scooters, etc. which are rapidly increasing in number. This could increase the feasible range of such vehicles, making their use for short commutes more practical, as well as support mass-transit by increasing the potential service area for individual transit stops. 8/10/2020 15:12	Ben	Sands	Hello! First, thank you for your work on this project. It's a major undertaking and is going to add tremendous value to our community. I've completed the survey and would simply like to add a request to keep the noise of 526 in mind in your planning. We live quite close to 526 and would appreciate any efforts you can make to reduce the noise pollution of the roadway. Sound barriers and quiet pavement, in particular, would help to reduce the impact of the increased traffic flow along this important roadway. Many thanks for this, and all you are doing. Ben Sands	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/9/2020 18:27	Jann	O'Toole	I took the survey but there were no questions about noise from the proposed expansion to I 526. We live close to an elevated portion of the highway and already have a lot of noise from it which will only increase with additional lanes and bridges. Planting trees won't help us. I hope you will consider this going forward.	Received General Comment Response Letter and FAQ Document	Email	10/15/2020
8/1/2020 22:54	Mary	Eaddy	Joy, I tried to rank noise as the top concern on the survey, but the instrument wouldn't let me. I met this week with a citizen group that will pursue noise abatement issues very soon through governmental and private contracting, public meetings and meetings with fifty public officials from around the state. It would be great if you and the private sector engineer of record could be there. I suggested the chair of the group contact you about this. Thanks so much. 11/14/2019	Marty	Blanchard	Thank you for the reply. One question. Do you think putting everyone in their own 4000 lb. vehicle the most efficient way to get them from point A to B?lf not why is this method encouraged and promoted. I still wonder why real long term solutions can't be supported and funded at the level of the same old short term solution of adding lanes. Real alternatives: I would fully support adding a lane that would be for buses, emergency vehicles and evacuations only. The only way mass transit will be successful is if it is a better option. If driving takes you 45 min. and the bus 15 min. people will use the bus. Move containers by barge inland to an intermodal station perhaps in Bushy park. There are rails there. Keep the trucks and trains out of the city. Work with MARAD. I think this administration offers you the best opportunity for real long term solutions like this. That river is not utilized. Real solutions.	Mr. Blanchard —Please keep in mind that strategies such as managed lanes, active traffic management and other tools that can create reliable travel times for transit and encourage drivers to change behavior do require infrastructure upgrades as well. Currently, the transit system does not have reliable travel times in the Charleston region, which makes this option unattractive to the travelling public. Projects currently underway such as Bus Rapid Transit and upgrading I-526 infrastructure to accommodate a wider range of future operational options are key to reaching a goal of reliable travel times for transit. We are proposing adding additional lanes and shoulder width which would allow flexibility in how SCDOT manages the facility and could allow some of these strategies to be implemented. The current infrastructure with 2 general purpose lanes in each direction and an aging electrical infrastructure would not support these future strategies. I would encourage you to review the I-26 corridor studies currently under development which also include a regional managed lanes study. The infrastructure improvements proposed with the I-526 Lowcountry Corridor project would allow room for these future operational functions as a regional approach (which is key to success).https://www.scdot.org/projects/i26-corridor.aspxPlease note that SCDOT also funded several travel demand initiatives after the 2013 I-526 Planning Study was completed, which focuses on changing regional travel choices and providing incentives for other options. The Lowcountry GO project was funded to provide carpooling tools and incentives as well as incentives for businesses to incorporate vanpooling programs. http://www.lowcountrygo.com/. A Park & Ride project is underway to provide park and ride facilities across the region in this same effort. We also funded signal upgrades at all the ramp terminal along the I-526 WEST corridor in order to improve operations as low cost interim improvements on this corridor.https://www.526lowcountrycorridor.com/we	Email	11/15/2019
4/15/2020	Cathy	Sembower	Hope you are well.I'm writing to find out if there are any plans for a sound wall along I526 In Mt Pleasant, SC to go up next to the Tidal Walk and Grassy Creek community.Let me know if anything is in the planning stages.	Good Afternoon Cathy-The segment of I-526 from Cooper River to Mount Pleasant is part of the I-526 EAST project and more information can be found at our project	Email	4/15/2020
5/19/2020	Jo	Frkovich	I think the planned bridge expansion of the I 526 is totally unnecessary. The true traffic bottle neck is Ashley River Road. Free up Ashley River Road traffic and I 526 traffic flow will improve dramatically. You let the communities be built, now build expand Ashley River Road to support the development you have allowed.	Thank you for your comments.Joy Riley, PE, PMP, CPM, DBIA	Email	5/19/2020
5/27/2020	Susanne	Taylor	Hello,I tried the survey twice and lost it both times so I thought email would be better. The main issue on 526 between Virginia Ave and Mt. Pleasant is congestion and tractor trailers. The traffic is backed up before to even get to North Rhett going towards Mt. P everyday during the lunch hour. Not to mention during rush hours in the morning and evening daily. There are also cars speeding trying to get past the tractor trailers when they move to the truck lane. No one wants to be stuck behind them when they merge back over. The truck lane is ridiculous. You have to deal with them moving back to regular lanes after the bridges and half the time they dont see you or start to move over regardless. That idea was not completely thought out. There should be a dedicated truck lane all the way to Long Point road. Or better yet, start using a barge to transport the cargo from port to port and cut down on the truck traffic. I think that would be the ideal situation. Those are my main concerns. Whatever happens, please do NOT put in a bike lane. Thank you, S Taylor	Thank you for providing your comments. I apologize that you had trouble with the online survey.Joy Riley, PE, PMP, CPM, DBIA	Email	5/29/2020
7/28/2020	James	Horvath	The solution to 526 W and E is to repaint lanes over Don Holt and Wando bridges and highway after them to accommodate 3 (albeit narrow) continuous lanes. There is plenty of room to do this. These corridors should be treated like tunnels in NYC where they know how to manage traffic. These would be narrow lanes where people have to pay attention. Warnings of upcoming narrowing and to GET OFF PHONE AND PAY ATTENTION should be displayed on electronic traffic signs that precede bridges and are essentially not used at all.Additionally, improving traffic flow exiting 526W on to Rhett Ave would prevent exit lane backup on to the highway and subsequent backup toward the Don Holt bridge.Sincerely,James Horvath MDDaniel Island, SC	of the 3 lane section and that project will widen to match with the existing truck lanes. So where the truck lanes begin now heading in the WEST direction would be the start of the 3 lane section and then would widen out further to 4 lanes in each direction through the North Rhett interchange. We are also proposing significant changes to		7/29/2020

Re: Public Information Meeting for I-526 Lowcountry Corridor EAST PEL Study Charleston County and Berkeley County, South Carolina

Greetings,

Thank you for participating in the public comment period for the I-526 Lowcountry Corridor EAST (I-526 LCC EAST) Planning and Environmental Linkages (PEL) Study public information meeting held from July 15, 2020 to August 15, 2020. We appreciate your interest in this study.

As you know, the South Carolina Department of Transportation (SCDOT) is conducting a PEL Study for the I-526 LCC EAST to identify transportation issues and environmental concerns, from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The purpose of the study is to better define the project need and to identify alternatives that would improve travel time reliability and reduce congestion along the corridor. The PEL study will also look for improvements to address mobility issues and related to roadway deficiencies such as inadequate capacity, shoulder widths, on and off ramp lengths, and tightly curved ramps.

As the I-526 LCC EAST study progresses, we will explore ways to improve the project need, while minimizing any potential impacts on the surrounding community and natural environment. We will continue to encourage community involvement and communication to ensure the successful development of the proposed improvements. The findings of this PEL study will be carried forward into the next phase of the project development process, the National Environmental Policy Act (NEPA) process.

Your interest in the I-526 LCC EAST study is valued, and SCDOT assures you that all suggestions, objections, and concerns are carefully considered. Your comments have been made part of the official record.

As a result of your comment or question, we have compiled a list of Frequently Asked Questions. We encourage you to review the attached document and share these with your friends, neighbors, and colleagues. If you should have any further questions, please contact me directly at info@526LowcountryCorridor.com, call or text the project hotline (843.258.1135), or visit our Community Office (5627 Rivers Avenue, North Charleston – Gas Lite Square; CARTA Route 10). In response to current public health concerns, the office is operating by appointment only to ensure your safety. We encourage you to call, email, or text to make an appointment.

To stay engaged, please visit our website at www.526lowcountrycorridor.com/east/ to sign up for our newsletter, like us on Facebook at www.facebook.com/526Corridor/, or follow us on Twitter at twitter.com/526corridor.

Sincerely,

Project Manager – Lowcountry RPG

South Carolina Department of Transportation

Enclosures: Asked & Answered: Frequently Asked Questions I-526 LCC EAST

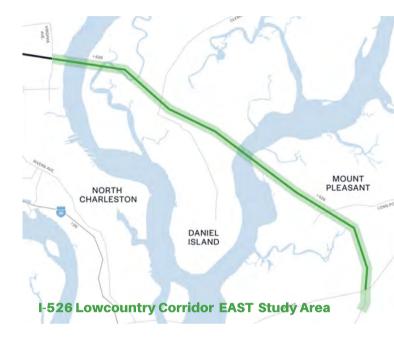

Asked & Answered

We've heard your questions & concerns. Here are some answers.

What is the I-526 Lowcountry Corridor (I-526 LCC) EAST Planning and Environmental Linkages (PEL) study going to accomplish?

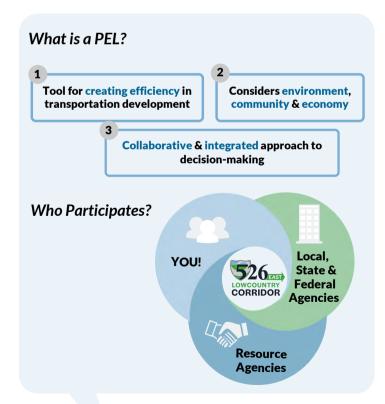

The results of the PEL study will help establish a vision for the corridor that will guide future transportation decision-making. Results from the PEL study will be carried into the next phase of project development which is the National Environmental Policy Act (NEPA) process. After the needs are better understood in this corridor, and potential improvements identified, the next steps, including potential phasing and project opportunities, may be developed. To learn more about the I-526 LCC EAST study area and the PEL study process and schedule, view the boards below.

What is a PEL Study?

A Planning and Environmental Linkages (PEL) study is a collaborative and integrated approach to transportation decision-making that considers environmental, community, and economic goals early in the transportation planning process, and uses the information, analysis, and products developed during planning to inform the environmental review process. This integrated approach considers environmental, community, and economic goals early in the planning process and uses this information to streamline the transportation project development and environmental review process. The resulting information of a PEL study will be carried forward into the next phase of the project development process, the NEPA process.

What is the difference in I-526 LCC EAST, I-526 LCC WEST, and the Mark Clark Extension?

The I-526 Lowcountry Corridor projects focus on improvements to the EXISTING I-526 roadway network, with the EAST study running from approximately US 17 in Mount Pleasant to Virginia Avenue in North Charleston and the WEST project extending from Virginia Avenue to Paul Cantrell Boulevard in West Ashley. The Mark Clark Extension project would pick up at approximately the end of existing I-526 in West Ashley and connect the communities of Johns Island and James Island. For more information on the Mark Clark Extension project, visit www.SCDOTMarkClark.com.

What types of alternatives are being evaluated for the I-526 LCC EAST?

During the PEL Study, conceptual alternatives that have the potential to meet the purpose and need of the proposed project will be developed. Alternatives are not limited to only the widening or replacement of a road. They can also include a wide range of alternatives such as reconfiguration and enhancements of the existing roadway or the exploration of alternate routes. Other potential improvements might include, managed lanes concepts, such as truck-only lanes; traffic operations, such as enhanced signage and incident management; and multi-modal strategies, including the accommodation of freight, transit, and non-motorized travel. These alternatives will then be evaluated through a screening process to identify and refine the improvements that best meet the purpose and need, while avoiding and minimizing impacts to communities and the environment.

How will I know if my house is being impacted by this project? How is this project being funded? When will this project happen?

The I-526 LCC EAST is currently in the beginning stages of a PEL study, a high-level study to identify transportation issues and environmental concerns. This PEL study may result in the identification of multiple potential projects. This will help SCDOT understand the potential number of projects, delivery methods, schedules and costs to complete the improvements. At this time, the project team is taking the community's feedback to develop conceptual alternatives. While more information will be shared at a public information meeting next year, any resulting information of the PEL study would be carried forward in the NEPA process. During the NEPA process, any potential impacts would be quantified in greater detail and a schedule and costs would be defined.

What is SCDOT doing to help reduce noise in the I-526 LCC EAST study area?

The EAST PEL study is a higher-level planning study, and a detailed noise analysis would be done in the next phase of the project development (NEPA). SCDOT understands noise impacts are an important concern for residents and will make it a top concern as the project further develops. SCDOT has policies in place that outline how it implements the Federal Highway Administration noise regulations and standards for federal aid projects and/or projects subject to Federal Highway Administration approval. More information on that noise policy can be found here:

https://www.526lowcountrycorridor.com/east/traffic-noise/

How does SCDOT decide which communities get noise walls and which do not?

Once SCDOT has completed the detailed noise analysis during the NEPA phase of the project, and potential noise impacts are anticipated, the following questions will be considered:

- Will a noise wall reduce the noise enough to justify its construction? Sometimes, a noise wall will not reduce the noise enough to be considered reasonable and/or feasible.
- Is a noise wall technically feasible? Every road is different.
 Many factors are considered such as topography, safety,
 drainage, utilities, maintenance of the wall, and whether
 driveways and side road access will be impacted.
- How many people will hear a difference in the noise? Is that number high enough to justify the cost? Sometimes, the cost is too high to build a wall when compared to the benefits received.
- Does a simple majority of property owners and tenants who receive a predicted noise level reduction due to the construction of a noise wall actually want the wall? Public preference for or against a wall is obtained through a balloting process.

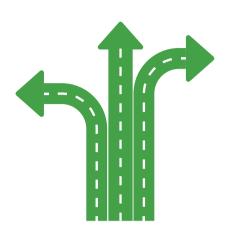

Can't SCDOT just restripe the lanes over the Don Holt and Wando bridges and mainline to widen to three lanes?

SCDOT studied restriping the section of I-526 between I-26 and Clements Ferry Road, but the safety analysis predicted a significant increase in crashes without the addition of a shoulder. Why are shoulders important for your safety? Shoulders allow drivers to more safely pull out of the way of traffic after accidents and they also provide an area for drivers to move to avoid crashes or recover control of their vehicle. The electrical system along that section of corridor is in disrepair and would need to be upgraded before SCDOT could add technology, such as lane signals, that might mitigate for the loss of the shoulder.

What happens next with the I-526 LCC EAST PEL Study?

The study team is assessing public comments to further define the needs of the project. A range of conceptual alternatives are being developed along with the methodology to assess their performance and potential impacts to the study area. Those alternatives that are identified as having a limited ability to meet the purpose and need of the study, or have higher impacts on the natural and human environment, will be removed from further study and documented as to why they were removed. The resulting information of this PEL study will be carried forward into the next phase of the project development process, the NEPA process.

Public Information Meeting 2 Summary

PUBLIC INFORMATION MEETING 2 SUMMARY

The public comment period associated with the second public information meeting for the I-526 Lowcountry Corridor (I-526 LCC) EAST Planning and Environmental Linkages (PEL) Study located in the Charleston region of South Carolina was open from October 11 to December 1, 2021. Materials were made available to the public in a variety of methods including on the project website, in-person at two public information meetings (one each in Mount Pleasant and North Charleston), and by USPS upon request. Additionally, the public could engage and ask questions of the project team by calling the project hotline (843.258.1135) or emailing the project email address

(info@526LowcountryCorridor.com). Between October 11 and December 1, 2021, the landing page for the public information meeting materials had 6,939 views. On October 26, 2021, 201 people attended the in-person public meeting located at the RL Jones Center in Mount Pleasant, and on October 27, 2021, 33 people attended the in-person meeting located at the Felix C. Davis Community Center in North Charleston.

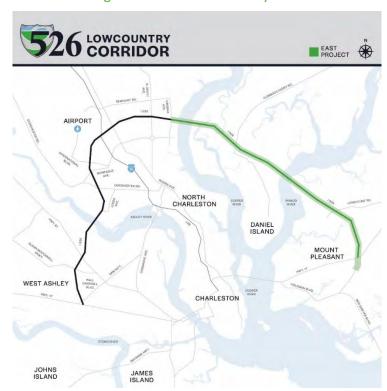

Figure 1 I-526 LCC EAST Study Area

1.0 PUBLIC INFORMATION MEETING 2 (PIM2)

Two PIMs for the I-526 LCC EAST PEL Study were held on October 26 and October 27, 2021, in Mount Pleasant and North Charleston, respectively. Additionally, all public information meeting materials were available online at www.526lowcountrycorridor.com/eastvpim2021/.

The purpose of the Public Information Meetings was to explain how public input has been used to inform the concepts development and screening process, ask for public input on the Reasonable Alternatives, and outline the next steps in the project development process.

Additionally, SCDOT wanted to gather information from the public, resource agencies, and project stakeholders on any resources in the study area including historic or cultural resources in the area. The information presented at the PIM2s were available in both English and Spanish.

IN-PERSON MEETING CONTENT AND FORMAT 1.1

Drop-in Public Information Meetings took place partially indoors and partially outdoors. These openhouse meetings did not have a formal presentation. Content was designed to educate the public about the potential improvements along this corridor, analysis done to date, and how their previous input had been used. Additionally, the meeting was designed to receive input from the public. Handouts were available in English and Spanish, and translators were available on site at each meeting to help guide Spanish-speakers through the materials. In-person materials included a mixture of static boards and smartboards. The layout was setup with sign-in and safety screening tables outside, static boards arranged under a tent, and smartboards, roll plots and additional static boards set up inside the venues. The boards/stations included:

- 1. Welcome/Sign-in (included a safety screening)
- 2. Planning & Environmental Linkages (PEL) study
- 3. Purpose & need
- 4. What did we hear from the public and how was input used?
- 5. Traffic growth
- 6. Travel time reliability
- 7. Concepts evaluated
- 8. Transportation Systems Management & Operations (TSMO)
- 9. Alternatives concepts screening process
- 10. Wando Bridge/Don Holt Bridge features
- 11. Design concepts evaluated (smartboards and roll plots)
- 12. Traffic performance of reasonable alternatives
- 13. Conceptual options for the Long Point Road/Wando Port Interchange
- 14. Next Steps

Understanding the current public health concerns, temperature checks were performed, social distancing was encouraged through the use of stanchions, and sanitizer was available throughout at all meetings. Additionally, staff wore masks indoors and outdoors. Masks were required inside the facility in North Charleston per city ordinance and highly encouraged under the tent. Masks were highly encouraged inside and outside in Mount Pleasant as it was not required by the venue or town ordinance.

1.2 ONLINE MEETING CONTENT AND FORMAT

To accompany the in-person meetings, an online public meeting was available throughout the comment period (October 11 - December 1, 2021) and will remain on the project website for the duration of the project development process. The online format allowed the public to view materials and participate on their own schedule. The materials were divided into four main sections: Project Background, Growing Mobility Needs, Concepts Development & Screening Process, and Next Steps & Comments. All materials were available online in both English and Spanish.

Figure 2 I-526 LCC EAST Online Public Meeting

Public Meeting Overview

The I-526 Lowcountry Corridor EAST Public Information Meeting ended December 1, 2021. ALL Public Information Meeting materials are still available online below. In-person opportunities to participate were held on:

- Tuesday, October 26, 5-7 PM, R. L. Jones Center (391 Egypt Road, Mount Pleasant, SC)
- Wednesday, October 27, 5-7 PM, Felix C. Davis Community Center (4800 Park Circle, North Charleston, SC CARTA

These drop-in Public Information Meetings took place partially indoors and partially outdoors. These open house meetings did not have a formal presentation. The City of North Charleston required masks inside their buildings. Masks were highly encouraged when not required. The COVID-19 conditions were continually monitored. In accordance with current public health guidelines, temperature checks were performed at all meetings. Anyone with a temperature of over 100.4 was not allowed to

The purpose of the Public Information Meeting was to:

- . Explain how YOUR input has been used to inform the concepts development and screening process
- · Ask for your input on the Reasonable Alternatives
- · Outline the next steps in the project development process
- · Gather information on historic or cultural resources and any potential impacts

2.0 PIM ADVERTISEMENT

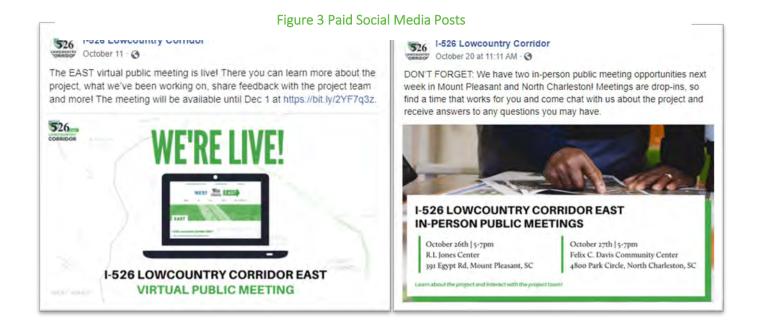

¹ https://www.526lowcountrycorridor.com/eastvpim2021/ accessed on December 10, 2021.

Multiple types of advertisement, both traditional and non-traditional, were used to publicize the PIMs. These methods are outlined below.

2.1 ADVERTISING METHODS

Paid Social Media

²Paid social media was used to drive traffic to the online meeting. Social media ads were created using the project's Facebook account to reach the target audience of residents, businesses, and commuters using I-526 LCC EAST PEL Study within Facebook. Figure 3 shows two of the project's paid Facebook advertisements used to drive users to the project website. Additionally, organic posts on both Facebook and Twitter were posted on the project's accounts to encourag participation online and in person on the projects' social media posts.

Eblast

An eblast is an email message that goes out to a group of people in mass, simultaneously. In this case, the I-526 LCC EAST project has a joint mailing list of interested parties with the I-526 LCC WEST project. People can subscribe to receive email updates online for these projects online or in person.

- October 11, 2021: An eblast announcing the PIM2 was live was sent to 1,925 recipients.
- October 25, 2021: An eblast reminding interested parties about the in-person PIMs was sent to 1,936 recipients.
- November 30, 2021: An eblast reminding interested parties about the end of the comment period on December 1, 2021 was sent to 2,205 recipients.

² https://www.facebook.com/526Corridor accessed on December 10, 2021

Postcards

Postcards were mailed to all mailboxes within a one-mile buffer of the study area (7,463 mailboxes) on October 8, 2021.

Figure 4 Front and Back of Postcard Mailer

Press Release/Media Day

A press release was distributed by SCDOT's communications office with the launch of the online PIM on October 11, 2021, and a media event was hosted on October 25, 2021 at the I-526 LCC Community Office. The following is a record of media outlets that covered the I-526 LCC EAST project.

3.0 PARTICIPANT DEMOGRAPHICS

3.1 In-person Public Information Meeting Attendees

In-person meeting attendee demographics were tracked by female (African American, Caucasian, Hispanic, and other minority) and male (African American, Hispanic, and other minority). Below are the attendee counts at each meeting:

Date/Time: October 26, 2021, 5:00 - 7:00 PM

Location: RL Jones Center (391 Egypt Rd, Mt Pleasant, SC 29464)

Attendees: 201 Demographics:

African American Female: 1
African American Male: 2
Caucasian Female: 81
Hispanic Female: 0
Hispanic Male: 0
Female Other: 0

Male Other: 0

Date/Time: October 27, 2021, 5:00 - 7:00 PM

African American Female: 4

Location: Felix C Davis Community Center (4800 Park Cir, North Charleston, SC 29405)

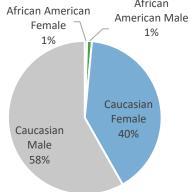

Attendees: 33 Demographics:

African American Male: 4
Caucasian Female: 4
Hispanic Female: 0
Hispanic Male: 0
Female Other: 0
Male Other: 0

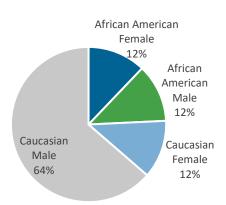

Figure 6 Demographics of In-person PIM2 Attendees

Demographics of Attendees October 26, 2021

African

Demographics of Attendees October 27, 2021

3.2 WEBSITE ANALYTICS

Website analytics show direct traffic was one of the top drivers to the website, followed by referrals and organic searches, then social media. Direct traffic refers to people who typed in the website address directly to get to the site instead of clicking a link from somewhere else. This data has been derived from Google Analytics, rather than self-selection, meaning people coming to the website did not self-identify how they arrived.

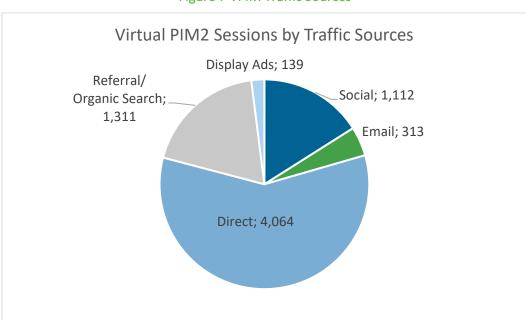

Figure 7 VPIM Traffic Sources

3.2.1 Website Demographics

There were 6,939 sessions on the PIM webpage during the public comment period. The average time spent on the virtual public information meeting was four minutes 35 seconds. Of the age and gender data that was collected from website sessions, the highest participating cohort were males (59%) and people within the 35-44 age range.

Geographically, participants were dispersed across the study area from Mount Pleasant to Charleston (which includes Daniel Island that lies within the study area) and North Charleston. Figure 1 shows a map of the I-526 LCC EAST study area. The Charlotte, North Carolina and Atlanta, Georgia aberrations could be from several factors such as their internet service provider registering them in Charlotte (often is the case in businesses), tourists, or those currently out of the area. Additionally, they could represent property owners whose primary residence is in another area or commercial drivers who do business in this area. With the data available, it is not possible to determine the true nature of these aberrations.

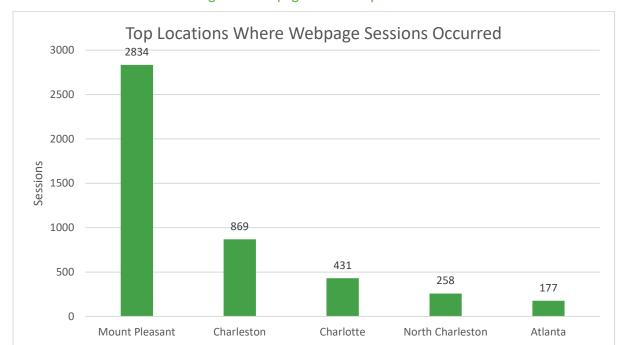

Figure 8 Webpage Sessions by Location

4.0 COMMENTS

A total of 558 comments were received during the formal comment period (October 11 through December 1, 2021). Of those, 32 were duplicate comments. Duplicate comments are comments that were made by the same person at least twice, that are verbatim, or have exactly the same sentiments and themes. Duplicate comments are counted toward the total number of comments made, but their sentiments and themes were only tallied once.

There were multiple ways to submit comments: through the website (VPIM or general contact page), email comments directly to info@526LowcountryCorridor.com, mail to Joy Riley, SC Department of Transportation, Post Office Box 191, 955 Park Street, Room 401, Columbia, SC 29202-0191, or by leaving a voicemail on the I-526 LCC hotline (843.258.1135). Comments received include:

- 377 online comments through the virtual public information meeting webpage
- 27 online comments through the main project contact webpage
- 84 email comments
- 15 hotline comments
- 52 in-person comments
- 3 stakeholder comments

The top six comments or concerns received during the public comment period were:

- 1. Support for Option 2 for the Long Point Road/Wando Port Interchange (45%)
- 2. Traffic Concerns (Inclusive of Truck Traffic Concerns) (45%)
- 3. Truck Traffic Concerns (37%)
- 4. Support for Separate/Dedicated Truck Access to/from Port (23%)
- 5. Noise Concerns (22%)
- 6. Safety Concerns (22%)

The most common comment was in support of Option 2 for the Long Point Road/Wando Port interchange.

The second and third most common comments were related to traffic concerns, primarily truck traffic concerns. 23 percent of comments received supported a dedicated truck access to/from the port. Others were related to trucks needing to stay in the right lane or designated truck-only lanes. Many comments discussed that trucks travel in the left lanes and slow traffic.

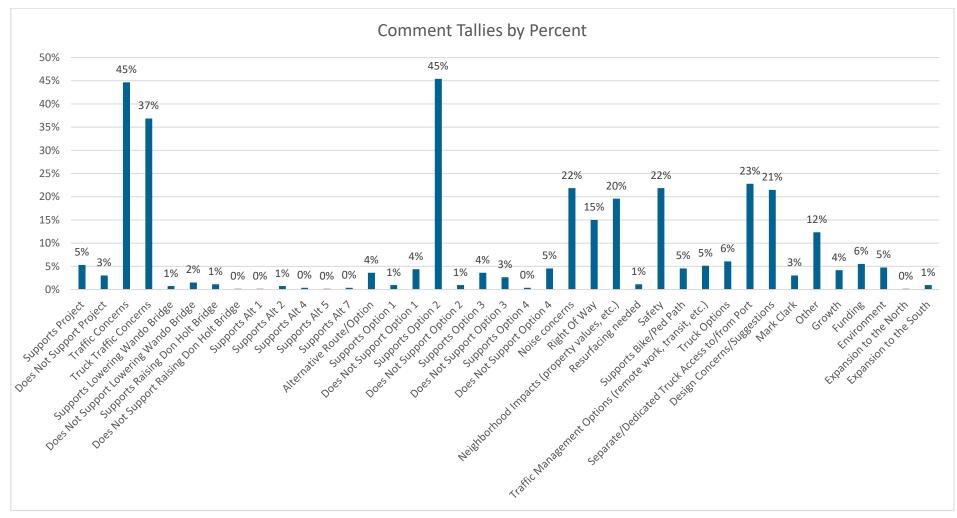

Noise and safety concerns were both frequently noted (both 22%). Most noise comments were related to present and future noise concerns in communities adjacent to the I-526 corridor in Mount Pleasant and Daniel Island. Comments that expressed concerns about or need for safety were typically related to speeding, trucks in the left-lane, emergency vehicles, or reducing accidents.

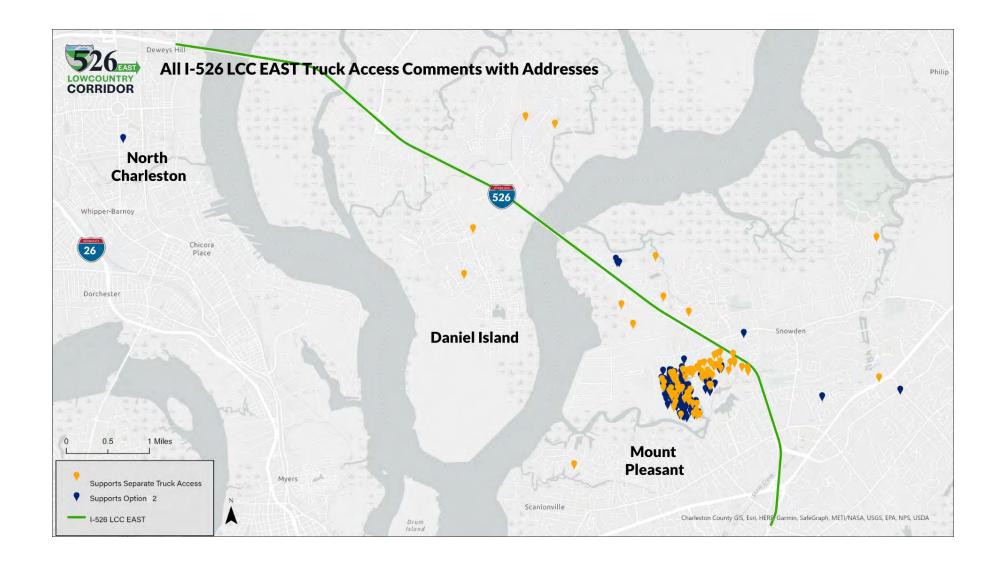

Figure 10 Comment Summary

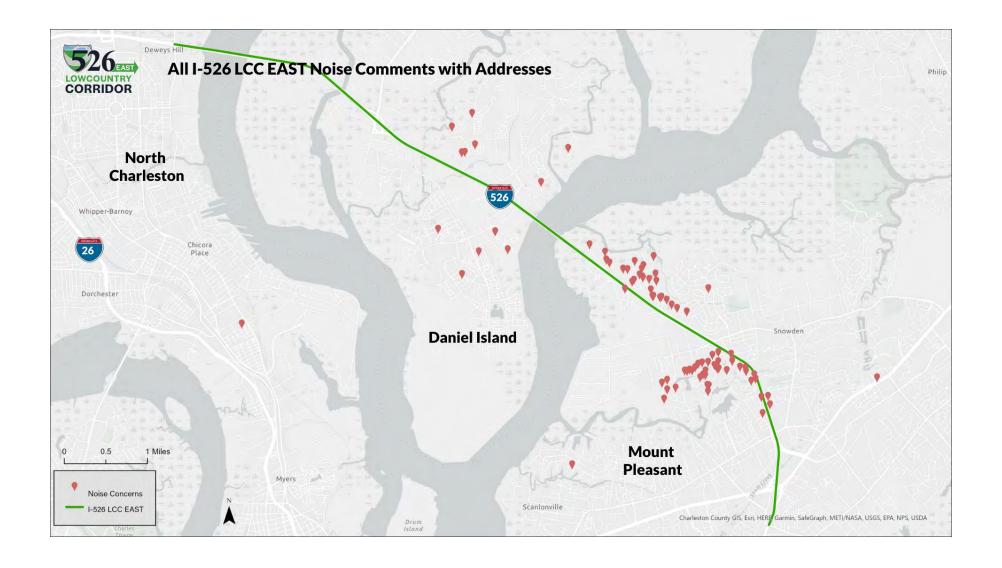

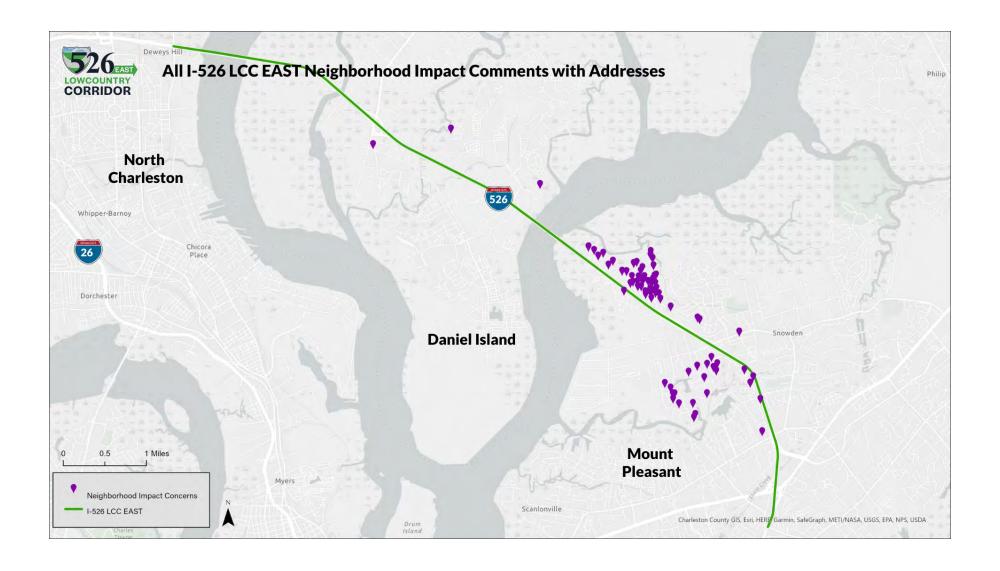

These tallies are representative of general sentiments only. Counts were applied if a specific theme or sentiment was discussed.

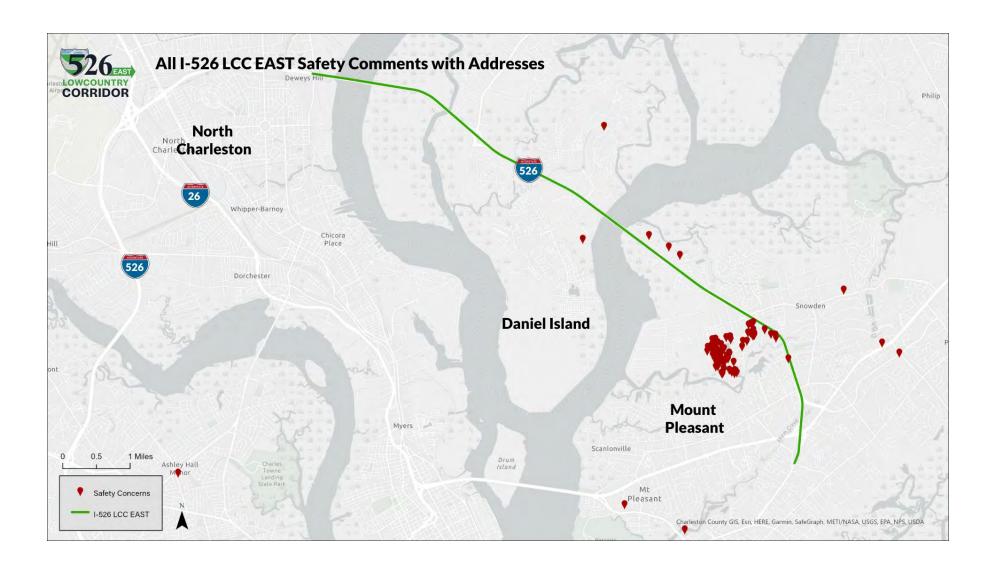

The following images are maps exported from GIS that are representative of comments received. Note, while the majority of comments did include addresses, some comments made, especially using the project email address, did not. Those are not reflected in the maps below. Additionally, a consistent map extent was chose for each of the maps so they could be better compared. This extent is representative of the majority of comments made that included addresses. It allows enough detail within the study area and surrounding region to have a sense of scale in density of comments. Comments received outside of this map extent were outliers.

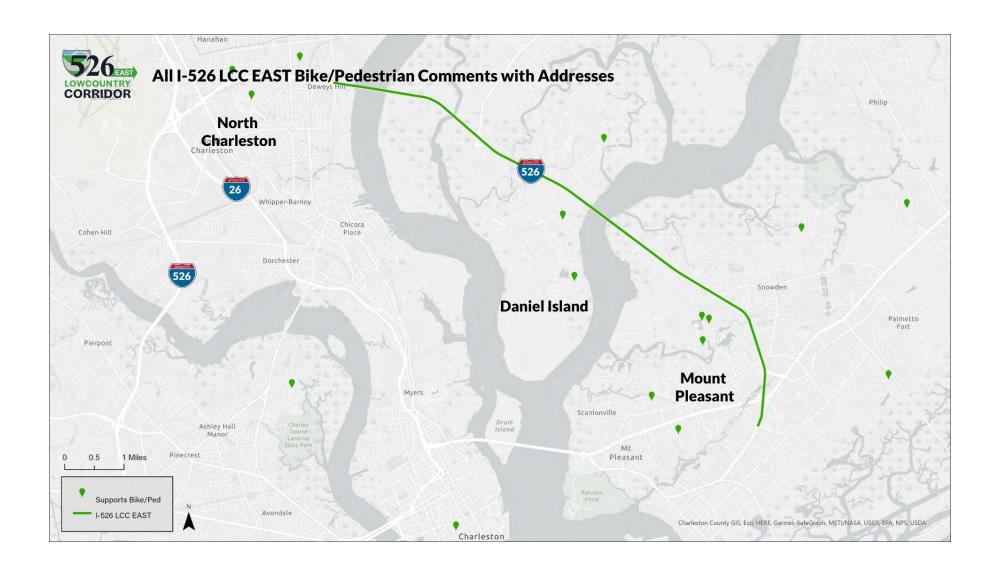

I-526 Lowcountry Corridor EAST Public Information Meeting

Official comment period October 11 - December 1, 2021

Meeting Purpose

- Explain how YOUR input has been used to inform the concepts development and screening process
- Ask for your input on the Reasonable Alternatives
- Outline the next steps in the project development process
- Gather information on historic or cultural resources and any potential impacts

Tuesday, October 26, 5-7 PM R. L. Jones Center 391 Egypt Road, Mount Pleasant, SC

Wednesday, October 27, 5-7 PM Felix C. Davis Community Center 4800 Park Circle, North Charleston, SC CARTA Routes 13 & 104

Study Overview

SCDOT is conducting a Planning & Environmental Linkages (PEL) Study for the I-526 Lowcountry Corridor EAST (I-526 LCC EAST), which extends along I-526 from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The PEL study examines existing and projected transportation issues within the corridor based on the input YOU provided during the 2020 public information meeting and survey. Your input validated the data we gathered and was used to develop the draft Purpose and Needs you see to the right.

This study will be used to establish a vision for the corridor that will guide future transportation improvement projects. Results of the PEL study will be carried forward into the next phase of the project development process, the National Environmental Policy Act (NEPA) process. After the needs are better understood in this corridor, and potential improvements identified, potential phasing and project opportunities, can be developed.

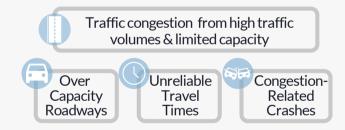

Project Purpose

The purpose for transportation improvements along this corridor is to **improve travel time reliability & reduce congestion** along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant.

Identified Needs

Mobility

This is a busy corridor supporting a large number of people, goods, and services. The key issues are:

Roadway Deficiencies

The current roads, bridges, and interchange ramps are not designed to handle the current or future traffic demands. The key issues are:

How was YOUR input used?

Your feedback is critical to the success of this Planning and Environmental Linkages (PEL) Study. Input received during this process is helping to establish the purpose, needs, and priorities for future improvements within this corridor. Insight gained from the online Survey (May - August 2020) and online public information meeting (July through August 2020) was used to:

To validate the purpose & need for transportation improvements in the corridor

To refine project goals

To develop alternatives concepts

Project Goals

A PEL study allows us to think strategically and fold in regional and community considerations. With your input, the following goals have been established. These goals provide additional guidance for creating improvement concepts and the evaluation of those alternatives concepts.

Compatibility: Align with local land use plans & projects

Demand: Accommodate increased numbers of vehicles

Seismic: Design any new roads or bridges with new earthquake standards

Connectivity: Improve connections with local ports, railway facilities, and transit

Safety: Reduce traffic-related crashes

Multimodal: Enhance movement through the corridor including through other modes such as carpool, transit, walk, or bike

Technology: Accommodate future transportation technologies for vehicles, system monitoring, driver information, and traffic operations

What did the data say about the need?

The data mirrors your concerns about growing congestion and mobility along the corridor. With the increased number of vehicles anticipated, the current traffic congestion is expected to increase and result in a failing level of service (think bumper-to-bumper traffic) throughout most of the corridor during morning and evening rush hours in 2050 if no improvements are made.

increase in AADT expected in

Annual Average Daily Traffic (AADT)

is the total number of vehicles driving through a road segment for a year divided by 365 days

increase in truck volume expected in 2050

Failing levels of congestion in 2050 if no improvements were

How and why do we measure Travel Time Reliability?

The Travel Time Index represents the additional time required to drive a certain route during rush hour, as opposed to when there is no traffic. Why would we use this measure? If roads have a lot of traffic, a slight disturbance can cause: excessive delays, have a greater impact, and take longer to recover than in a non-congested area.

Time it takes to get somewhere

How long it would take to get there if you could go the speed limit

Why use this measure? If roads have a lot of traffic, even a slight disturbance can cause:

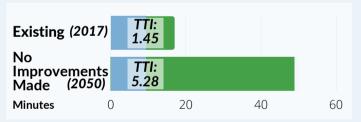

- Excessive Delays,
- Have a <u>Greater Impact</u>, and
- <u>Take longer to Recover</u> than in a non-congested area.

What would this tell me?

How long it would take to go from Virginia Avenue to US 17 in Mount Pleasant in 2050 when there is no traffic (blue) vs rush hour (green)

These graphs explain the Travel Time Index. Blue represents how long it would take to drive the corridor if there were no traffic like in the middle of the night (2050). Green represents the additional time it would take to travel the corridor during rush hour. The green bars are substantially longer under the no improvement scenario - meaning it would take that much longer to drive the corridor during rush hour in 2050 if no improvements are made during.

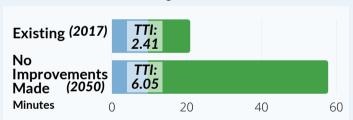

Eastbound - Going to Mount Pleasant

Legend:

Westbound - Going to North Charleston

What does this mean?

If no improvements were made, travel times are expected to increase in 2050 by:

193% traveling Eastbound Going to Mount Pleasant **104% traveling Westbound** Going to North Charleston

Reminder: with increased congestion, a slight disturbance can create unreliable travel times when driving the corridor.

What types of concepts did we look at?

Based on your input, we developed several types of concepts. These range from the "do nothing" or "no build" alternative, to those designed to alleviate the demand on the corridor, to an alternative, parallel route. After those concepts were explored, we also evaluated how many lanes might be needed.

The "No Build" Alternative

What would happen if no improvements were made? Increased travel times and congestion. Additionally, as congestion increases, congestion-related crashes typically increase.

Transportation Systems Management & Operations (TSMO)

What other options could help extend the life of I-526 and/or prevent the need for us to build anything?

TSMO strategies are used to extend the life of a highway and avoid or delay the construction of new lanes. Existing infrastructure may not always support these options without additional construction. In this case, TSMO strategies alone would not provide the level of improvement needed. Analyzed strategies are located on the next page.

Parallel Route

Why not build a new parallel road reduce traffic?

A new alternative route would only provide minimal improvements in congestion and travel speed. It also would not improve the roadway deficiencies of the existing I-526 corridor.

Adding Lanes

If we were to widen the existing road, how many lanes would we need in each direction?

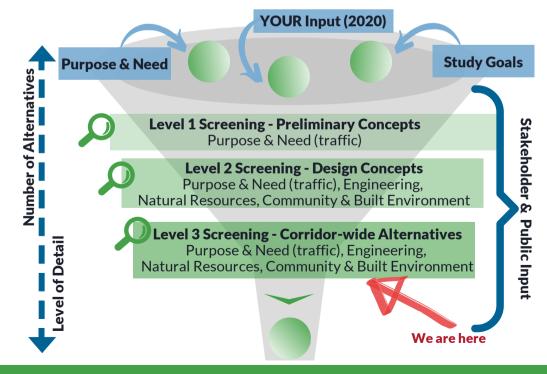

1 lane in each direction would not improve congestion or travel time enough in 2050. Adding 2 lanes in each direction would improve both congestion and the roadway deficiencies on I-526.

How were the alternative concepts evaluated?

The project team evaluated the alternatives through a threestep screening process to identify the reasonable alternatives that are presented today.

Each level of screening included a more detailed analysis of the alternatives. As the process progressed, poorly performing alternatives were removed from further review.

The resulting alternatives are proposed to be carried forward into the NEPA process.

Which TSMO options were analyzed to help prevent the need for construction?

TSMO strategies are designed to extend the performance life of infrastructure and avoid or prevent construction of new capacity. Because of the constraints of the existing bridges, it would not be possible to retrofit the corridor with enough TSMO strategies to fully address the capacity needs of the corridor. However, a planning-level analysis identified which TMSO strategies supported the project's need and should be further evaluated.

Proposed to be carried forward into NEPA

Shoulder Lane Use
i.e. "Bus" or "Car on Shoulder"
Shoulders are used as flexible
travel lanes during rush hours

Accommodate Connected & Autonomous Vehicles
Uses technology to improve safety and operations

Park and Ride
Provides parking for ride
sharing and bus use

Traveler Information
Incident Management
Road Weather Management
Work Zone Management

Variable Speed Limit
Speeds adjusted to optimize traffic flow

Enhance Lane Markings
Improves driver experience

Not reasonable for this project

Why not? These managed lanes options do not meet the Purpose & Need of the project without regional implementation. HOWEVER, any project constructed would be done in a manner not to preclude the implementation of a regional plan.

High Occupancy Vehicle Lanes i.e. Carpool Lanes

High Occupancy Toll Lanes Lane for vehicles with more than 1

passenger or those willing to pay

Dedicated Truck Lanes

Congestion Pricing

Includes a toll that changes to control the number of vehicles

Ramp Metering
Controls the number and pace
of cars entering the freeway

Truck Platooning

Uses technology to allow multiple trucks to travel in a very tight formation

Why not? Some simulation models showed merging issues for general traffic.

How do the reasonable alternatives compare based on the identified criteria?

Below include highlights of the evaluation within the Level 3 Screening of the corridor-wide alternatives. As the project progresses, interchange designs and operations will be further evaluated. As an example, options are being considered to improve truck and automobile mobility through the Long Point Road interchange.

	No Build	Alternative 1	Alternative 2	Alternative 4	Alternative 5	Alternative 7
Replace Don				NEW	NEW	NEW +
Holt Bridge?	Кеер	Кеер	Кеер	Replace + Raise	Replace + Raise	Replace + Raise
Replace Wando Bridge?	Keep	NEW + Period Replace + Lower	NEW + Replace + Lower	NEW + Replace + Lower	NEW + Replace + Lower	NEW + Replace + Lower
Impacts to Aquatic Resources (acres)	0 Acres	179 Acres	177 Acres	167 Acres	174 Acres	178 Acres
Relocations	0 0	73 48 25	73 46 27	80 68 12	64 49 15	72 46 26
Impacts to Parks & Recreational Facilities?	None	Ralph M. Hendricks Park, Governors Park, Kearns Trail	3 Ralph M. Hendricks Park, Governors Park, Kearns Trail	2 Ralph M. Hendricks Park, Governors Park	3 Ralph M. Hendricks Park, Governors Park, Kearns Trail	3 Ralph M. Hendricks Park, Governors Park, Kearns Trail
Impacts to Threatened & Endangered Species?	No	No	No	No	No	No

All reasonable alternatives, except the No Build, include a 14 ft. shared-use path along the river crossings to provide access for bicycles and pedestrians. The shared-use path along these river crossings would connect with planned and existing facilities and support regional multi-modal goals.

Costs

Cost is not a determining factor at this stage. However, variables influencing costs include whether or not a bridge would be replaced, the right-of-way needed, having to move any utilities, and any costs associated with mitigating impacts to the environment or communities.

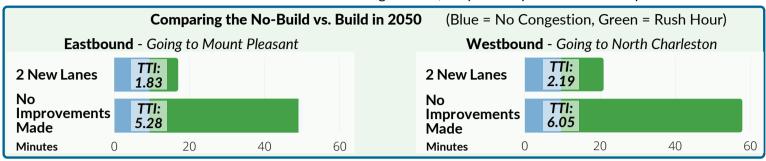

To see the reasonable alternatives, visit our website at www.526LowcountryCorridor.com/eastvpim2021

How do the reasonable alternatives improve Travel Time Reliability?

Since all reasonable alternatives have the same lane configurations, they would provide similar improvements.

In 2050...

The Travel Time Index indicates it would take less time to drive from North Charleston to Mount Pleasant (and the reverse) if any of the reasonable alternatives were constructed.

Headed eastbound, it would take **49 minutes** to drive the corridor if no improvements were made vs. **17 minutes** if any of the reasonable alternatives were constructed. Similarly, it would take approximately **58 minutes** to drive the corridor to North Charleston if no improvements were made and only **21 minutes** with the proposed improvements.

What happens next?

The PEL study provides SCDOT leadership the estimated project costs to help better plan the schedule for future improvements. Schedules for construction would be established in the next phase, NEPA, and would be based on the priorities, estimated costs, available funding, and design details. A detailed noise analysis would also be completed during this phase when designs are more refined and would allow for a more accurate analysis.

PUBLIC & AGENCY INVOLVEMENT Project Maintenance Planning & Environmental NEPA Linkages Study (PEL) Implementation Operations 1.5 - 2.5 Years 1-2 Years • Confirm/refine Planning studies **Existing conditions analysis** purpose & need **Future forecasts** Detailed Study goals environmental Purpose & need studies & noise Range of alternatives and analysis screened reasonable Refine alternatives alternatives **Explore mitigation &** Final design Cost estimates and Maintenance of commitments **Right-of-way** Implementation Plan roadway and right-**Prepare decision** Level of NEPA analysis: acquisition of-way **Permitting** Categorical Exclusion, document Mitigation **Environmental Assessment. or**

Title VI compliance: SCDOT complies with all requirements set forth by Federal regulations issued by the U.S. Department of Transportation under the Title VI of the Civil Rights Act of 1964, as amended. Any persons who believe that he or she has been discriminated against because of race, color, religion, sex, age, handicap or disability, or nation origin under a program receiving federal aid has the right to file a complaint with SCDOT. The complaint shall be filed with the Title VI Program Compliance Coordinator, at the Office of Business Development & Special programs, 955 Park Street, Suite 117, Columbia, SC 29202 or at 803.737.5095. The complaint should be submitted no later than 180 days after the date of the alleged act of discrimination. It should outline as completely as possible the facts and circumstances of the incident and should be signed by the person making the complaint.

M\	V#1	October 11, 2021 at 3:48 pm	Hello, I am writing as a resident of Hidden Cove (next to the port off Long Point) to comment on the I-526 corridor improvement. I read your recent mailings and have comments on the Long Point Interchange - Option 1 seems like a non-starter. It seems crazy to invest so much in adding more lanes then doing nothing to improve the Long Point Interchange Option 2 IS BY FAR THE BEST as it removes virtually all the truck traffic from Long Point road - Option 3 seems like a bad idea as we would be investing all that money for the truck flyover 526 and yet still not get all the truck traffic off Long Point and Hidden Cove cars and people would still be mixing with trucks at a traffic light which seems like a bad idea safety wise, but also would not help get in and out the neighborhood as much as Option 2. Still much better than Option 1 and 4 Option 4 is quite confusing I am not sure why this is better than what we have today? It also seems like it would have the most impact during construction as all the change are in roads with heavy use. Seems very disruptive and I don't see how it helps at all.	Good Morning Mr. Mirman — Thank you for participating in our Public Information Meeting and providing comments. The preliminary alternatives presented for the Long Point Interchange have not been modeled fully from a traffic operations perspective, and we anticipate that Option 1 would likely perform very poorly. At this stage of the project, we are informing the public that we have identified a need for interchange improvements at Long Point Road and get comments on the proposed interchange models to be studied in the next phase of that project's development. We are obligated to include improvements at Long Point in the range of alternatives in order to demonstrate the potential need for a partial interchange if the traffic analysis shows that this is the best performing alternative. The 4th option is a diverging diamond interchange model, which is a great interchange model for the large number of left turns we have in this interchange. However, the anticipated impacts on Long Point Road are likely significant with this impact as you have also pointed out in your comments. But it will be studied since we must demonstrate the performance and impacts for comparison to the other options during the environmental evaluations. We anticipate that the Long Point / Wando Interchange project will be the first project funded from the study and so we would likely move into the Environmental documentation phase next year with that interchange project. We would anticipate coming back next year to the public in order to show the traffic performance of the proposed interchange models and the impacts and gather public input on the recommended preferred alternative. Thank you for your input. Please let me know if you have any other questions or concerns.	Email	10/12/2021
MV	V#2	October 13, 2021 at 1:17 pm	Its the James B. Edwards Bridge, NOT the WANDO BRIDGEthe Wando bridge is the original Wando River bridge up on hwy. 41. Get it together.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/13/2021
MV	V#3		> Why isn't SCDOT using current photographic maps that include current houses/apartments, which could potentially be radically affected by some of the proposed alternatives?	Good morning, Thank you for participating in our Public Information Meeting and for your question. SCDOT's consultant flew the corridor and obtained updated photography and mapping which was then used to develop the design concepts. The GIS tool being used to display the concepts uses the latest publicly available imagery. One of the screens however, was not displaying the latest photography. That has since been corrected. Thank you for calling that to our attention. Please let us know if you have any other questions or concerns. - The I-526 LCC EAST Project Team	Email	10/15/2021

М	W#5	October 26, 2021 at 12:21 pm	Is the project still considering a truck-ferry to between the Wando Terminal and I26 to reduce cargo traffic on 526? Thanks	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. The preliminary conceptual alignments and very high level right of way impacts can be viewed in more detail here: https://cdmsmith.maps.arcgis.com/apps/MapSeries/index.html?appid=fe86d08aec6948a2a171fd3c6950b413 . We would anticipate that the right of way impacts would be minimized during the design process. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. For more information regarding the Right of Way process, please check out the links below: https://www.youtube.com/watch?v=ISDHJxjUqSw https://www.scdot.org/business/pdf/rightofway/HighwaysandYou.pdf Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	11/8/2021
М	N#6	October 26, 2021 at 12:32 pm	What is the anticipated physical impact on Daniel Island of widening the Wando River Bridge? The bridge currently passes between LPT tennis facility and Governor's Park. How will the footprint of the new bridge impact those areas and the related trails? How will expanding bridge capacity effect noise levels on Daniel Island and how will the project mitigate any increase in noise levels? Thanks	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. The preliminary conceptual alignments and very high level right of way impacts can be viewed in more detail here: https://cdmsmith.maps.arcgis.com/apps/MapSeries/index.html?appid=fe86d08aec6948a2a171fd3c6950b413 . MW#8	October 26, 2021 at 7:23 pm	Concerning the widening of I-526 in the Mount Pleasant area, I think that any plan that does not include a dedicated port access ramp would be incredibly short sighted give what we are learning about the fragility of the supply chain. Every effort must be made to ensure that containers move continuously and unobstructed from all of our state ports. This project should not go forward without a dedicated access ramp.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. You have been added to our mailing list for project updates. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	11/8/2021
MW#9	October 27, 2021 at 9:35 am	Living off of Long Point Road, there has been a vast increase of thru traffic from 17 to 526. Are considerations being made to control the amount of thru traffic on community roads as we prepare to expand our highways to support the increase in demands? As residential and commercial development continues up 17N, more drivers will seek to use Long Point Rd to get to 526 and vice versa. I would like to know more about these potential impacts and to know if this was included with the study. I would also like to propose reducing thru traffic on Long Point Rd by restricting thru traffic entirely or at least during peak hours. If residents find it easier and faster to cut through the communities on Long Point Rd from 17 to 526 instead of using the hwy system, then there are larger issues with our hwy system that need to be addressed.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. SCDOT does not typically restrict traffic on public roadways unless the restriction is requested from the local municipality and they can present a valid safety or operational concern that justifies the restriction. Restrictions for commuter traffic on a public arterial route such as Long Point Road would be nearly impossible to enforce. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	11/8/2021
MW#10	October 27, 2021 at 1:11 pm	Dear SCDOT, Regarding the 526LCCorridor project, wouldn't it be more beneficial in the long run to focus on an outer belt connector to run from Awendaw area, across the marsh to Goose Creek area? This construction would be virtually unimpeded, especially not requiring removal of homes/businesses. Environmental issues are always used to reject such a plan but consider the amount of pollution that will be generated in the longer time it takes to do any of the proposed improvements. If there is a will, there certainly is a way. The Revanell Bridge was done under budget and on time. I encourage you to consider the outer belt alternative. Thank you for your attention.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. New parallel routes to I-526 were considered in the preliminary regional traffic analysis. However, these routes did not pull enough traffic off of I-526 to relieve the congestion as a standalone regional congestion improvement. The interstate system is our lifeline route for the region and must be managed to operate efficiently and safely. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). MW#18	November 30, 2021 at 2:59 pm	My wife and I are long time residents of Mt. Pleasant. As a local business owner we are pro South Carolina, pro business and pro ports. In addition to general increase in traffic we also understand the need for a better highway system to accommodate a higher volume of container trucks entering and departing the Wando Terminal. (Long Point Rd). It appears the bulk of traffic increases are and will be related to higher volume at the Wando Terminal. As a homeowner located in Hobcaw Creek Plantation, for over 27 years, we have seen a significantly higher level of truck traffic effecting Long Point road and our neighborhood. More trucks result in excess traffic, noise, air pollution and dangerous driving conditions. We have experienced much more of these conditions as the port continues to grow. I attended the public information meeting on October 26 at the R.L. Jones Center in Mt. Pleasant. I would like to compliment your department on the meeting format and an innovative approach which made me feel as if I am being heard and my opinion mattered. During this meeting I was able to engage with key segments of the proposed corridor and was focused mostly on the I-526 / I-26 interchange and the Long Point Road / Wando Port Interchange. My recommendations are: A. Long Point Rd / Wando Port Interchange — Option #2 Rather than tying up traffic at an already congested intersection, we strongly support your Option #2 which is to create a dedicated, truck-only interchange further up I-526 entering directly into and out of the port gates. This would allow for dedicated, truck-only traffic direct access to the Port gates without round-abouts, stop lights and regular car traffic experienced at the current Long Point Road intersection. B. Alternate I-526 Truck Exit/Entrance proposal: See proposed drawing attached Direct truck-only port access road exiting off the base of the Wando Bridge directly into the port This option would allow for all Port-related truck traffic to exit and enter I-516 with no stops or roundabouts. T	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. M	N#21		Major Concerns and Ideas: 1. Overlay I-526 with Hwy 17 from Mt Pleasant to West Ashley (all as I-526 Interstate highway) 2. New Ashley River Bridge (built like Cooper River bridge) 3. Elevate the new 1-526/17 roadway above the highest expected flooding levels 4. More flyover on and off ramps in congested areas (Johns and James Island/Ashley Phosphate) 5. Redo/improve ingress/egress to I-526 connected high volume endpoints (airport) 6. Setup remote bus stops for special events (stations for bus ride to concerts/sports events) 7. Alternative and supporting roadways (Hwy 52, Hwy 78, Hwy 17A, Hwy 61, Berlin G Meyers,) 8. Address proposed ideas to reduce trash, plans to react to flooding and water runoff quality 9. Identify opportunities for median use to evaluate methods to add value (bioenergy, biocleaning) 10. Consideration of collocated human pathways (walking overpasses, cycling and running paths) My Background: From 1953 to 1969, my family lived in Kingstree SC while my dad built 2 lane paved roads all through the swamps of the lowcountry. In 1969 we moved to Summerville (6 boys playing football for John McKissick) where the family stayed until all the kids graduated college. 5 of 6 boys went to the Citadel After college, I spent 20 years in the DFW area (Dalass, Rowlett, Westlake, Lewisville), 6 years in Arkansas, 8 years in Lane SC, 9 months in Columbus GA, more than a year in Bluffton SC and the rest of my time where I live now in Moncks Corner SC. I mention details about where I have lived to help identify specifics about road designs that I believe represent Best Practices. Examples and Explanations of potential Best Practices that could be used in SC Dallas I-635 circles the city with major tangent lines of other highways (I-30 East-West, plus I-35E, and Hwy 75 North-South). Dallas also has an inner circle (Belt Line Rd) and an outer circle (Hwy 121) as well as a center trangent roadway (Mockingbird Ln). Around 2000, Dallas added road grade rail down the center of the city (This was not	evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). MW#25	December 1, 2021 at 11:13 am	My entire family (5 voters live on Long Point Road near the port) is in favor of option 2 to create a new truck only off ramp to Wando terminal. Even better is the new option to take truck traffic directly to the terminal. Either case will reduce traffic on Longpoint road, improve safety on Longpoint, eliminate the need to move the intersection of Hobcaw Bluff drive and might reduce noise from 526 negating sound barriers. Please choose one of these options	Inank you for submitting a comment for the i-526 Lowcountry Corridor EAST Public information Meeting. We neard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. MW#26		I completely agreement that improvements need to be made to I526 and interchanges. Our input is focused on the dangerous truck traffic on I526, and especially on and off Long Point Road. That intersection is the gateway to Mount Pleasant and there is much traffic getting on and off from Long Point Road. Especially dangerous is the truck traffic leaving from the port and going down Long Point Road to access I526. They run the red light at the entrance to Hobcaw Creek Plantation, block the exit, speed, back up on I526 to exit onto Long Point Road, and they go too fast up the exit ramp to North West I526 (several times truck containers have fallen off the truck, resulting in traffic back up for hour(s), not to mention how dangerous it is to smaller vehicles. Long Point Road is not the best route for these trucks to take, and a direct route from the terminal to I526 needs to be an important focus of the development improvement plan. To not plan to solve this issue now, would only mean addressing it again laterkicking the can down the road. I believe Option #2 is the best option to solve this major problem.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. MW#27	·	-Totally opposed to 8 lanes. It will carry huge amounts of traffic on Hwy 17 in major shopping areas to get to areas to the north. Six lanes on I-526 and an alternative route would provide more safety for the citizens of the area. Noise is major concerns. Property owners in our neighborhood are already seeing impact on property values. Are there reimbursements for damage to property values? Berms, walls, or densely planted spaces are essential to ALL areas impacted. I see this when traveling in nearby states, why not SC? Option 2 for port/Long Point Rd interchange is essential for safety to Mt Pleasant motorists.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. Email	12/1/2021
MW#28	December 1, 2021 at 5:16 pm	Please please provide a dedicated port road to I-526! I live in Hobcaw Creek and witness trucks running the red light on Long Point Road on a daily basis. The police sometimes sit at our intersection, but every single trucker leaving the Port KNOWS that they're there and drive at posted speed. This afternoon, I was waiting to turn left into our neighborhood. The light turned red and, thank goodness, I trusted my instincts and didn't make the turn. After several seconds of the light at full red, a truck coming from the Port barreled through because he had been going TOO fast to stop. Everyone in the neighborhoods that line Long Point Road (and those up Wando Park Blvd.) take our lives into our hands when we leave our streets. We all knew when we purchased our homes that the Port was there. We did not know that the truckers would drive so recklessly as the port grew. Someone IS going to be killed. Getting onto I-526 is almost as dangerous as leaving our neighborhood! Entering an Interstate at 20ish mph after following a line of trucks around an uphill complete circle is highly dangerous too. The planning for the trucks to get to 526 was a mishmash of very poor ideas from the beginning. Please take this new opportunity that you've been given to plan responsibly and provide a dedicated port road to I-526 instead of through our communities entrances. Thank you for accepting input.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. MW#29		Hello, In a few word, I would like to bring your attention on 2 matters. 1) Noise. Additional lanes on the 526 will increase traffic and therefore sound disturbance. This should definitely be taken into consideration for the well being of the communities. 2) Safety, specifically on Long Point Road. The Port generates a lot of truck traffic and some of the trucks often don't stop at red light on Long Point, which makes it very dangerous for cars or even bike to cross. This is a real concern. With that regards, I am supportive of option 2, possibly 3 for the Long Point Road / Wando port interchange, for a direct access Port-526. Thank you for your time and consideration.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Email	10/13/2021
PIMW#3		1 at 3:53	owering the Wando Bridge and raising the Don Holt Bridge makes sense. Because most commercial activity, including restaurants and offices on Daniel Island are on the south side, adjusting bridges to the couth might reduce noise to most residential areas, including new apartments on Clements Ferry Road and senior living centers on Daniel Island. Please adjust construction requirements to reduce noise for neighborhoods. Thank you.	Ms. Eaddy – Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. We will be studying noise abatement along the corridor during the next phase of the project development, during the environmental phase of work for the project. PIM	- 1	October 11, 2021 at 5:33 pm	The alternative that I support for the I-526 LCC East PEL Study is Alternative 4 because Alternative 4 will replace the Don Holt Bridge and the Wando Bridge and will widen I-526 to the inside and outside which will help improve safety and reduce congestion.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. РІМ		October 11, 2021 at 8:12 pm	The parallel route should've been studied for north of Mt. Pleasant on Hwy 17 all the way to South of West Ashley creating an outer route for those wanting to bypass the city. It would create alternative routes for accidents, evacuations, and make more sense for 2050 considering all the housing development going on further out in all directions! For a better understanding of the subjects for comments you would like to hear about, questions should have been put in the comment section.	Mr. Brown - Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. As part of the preliminary traffic analysis, we did study the new alignment alternative route presented on this board (https://www.526lowcountrycorridor.com/wp-content/uploads/2021/09/What-types-of-concepts-did-we-look-at.pdf). This route includes a new alignment loop which connects to SC 41 and US 17. We study the origin and destination travel data in order to model how much traffic an alternative route may pull off of the existing I-526 route. In the case of the alternative route studied, this route did not pull enough traffic off of I-526 to result in a decrease in congestion on I-526. You local transportation planning organization developed this alternative loop in their long range plans for regional transportation needs (https://www.bcdcog.com/). Creating alternative East-West routes to US 17, south of the existing corridor would be extremely challenging and costly considering the density of development in this area. While this may help local traffic operations and improve congestion on US 17, it would not reduce congestion on the segment of I-526 being studied based on the origin/destination data that we have analyzed in our study. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).		10/12/2021
РІМ		October 12, 2021 at 7:00 am	Te: Long pt road / wando terminal. Option 1 looks very similar to current traffic flow and option 4 looks like a lot of stop and start traffic which is not ideal for tractor trailer trucks. Options 2 and 3 appear to ease congestion at the cloverleaf interchange, which is where current back ups seem to predominate and "spill" onto 526	Mr. Mikola — Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. The preliminary alternatives presented for the Long Point Interchange have not been fully analyzed from a traffic operations perspective at this time. At this stage of the project, we are informing the public that we have identified a need for interchange improvements at Long Point Road and get comments on the proposed interchange models to be studied in the next phase of that project's development. We are obligated to study interchange improvements at Long Point for a falternatives in order to demonstrate the potential need for analysis shows that this is the best performing alternative. The 4th option is a diverging diamnot interchange model, which is an interchange model designed for heavy left turn volumes in an interchange which we have at Long Point Rd. We anticipate that the Long Point / Wando Interchange project will be the first project funded from the study and so we would likely move into the Environmental documentation phase next year with that interchange project. We would likely come back next year to the public in order to show the traffic performance of the studied interchange models and the associated impacts and gather public input on the recommended preferred alternative. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).		10/12/2021

PIMW#7	2021 at 11:33	This is a much needed project. SC DOT continues to lead in its performance even when the Legislature removes its funding. The urgency of this project requires the life and safety protocols for the users of the new bridges to be built and planned now. Shifting some of the truck traffic which is expected to dramatically increase in the next 7 years will save lives. I support the tallest bridge proposal over the Wando.		Email	10/12/2021
PIMW#8	October 12, 2021 at 4:02 pm	Appreciate all the info. I am in support of the project. I am not concerned with noise and I am not concerned with the height of the bridges. My main concern would be cost-effectiveness, safety and alleviation of congestion.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). Email	10/13/2021
PIMW#9	October 12, 2021 at 4:31 pm	Would like to see three dedicated lanes that extend beyond just the two bridges (entirety of 526) and prohibit freight traffic /large trucks from the left-most lane. This will help with congestion and safety. Daniel island is isolated from recreation on foot or cycle from leaving the island. Having pedestrian and cycle lanes on the Wando bridge will help give more recreation options and give access via bike and foot to Mount Pleasant. Also consider options to reduce the traffic noise heard on Daniel Island (Water front trail and nearby residences) from the Wando bridge traffic.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. All of the proposed improvement concepts include widening to 8 lanes. With this many lanes, SCDOT will be able to restrict truck traffic on the innermost lane in each direction. Traffic noise will also be studied during the next phase of work on the project, during the environmental phase and these results will be presented in future public meetings as the reasonable alternatives are advanced further in design. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/13/2021

Email	10/13/2021
PIMW#11	October 12, 2021 at 5:27 pm	It is time to finish it . The new alternative looks great.	Good morning, Craig. We have received your comment but noticed that the comment was to "Finish it." Typically, when we see this comment it is in relation to the Mark Clark Extension project (https://www.scdotmarkclark.com/) which would propose to connect West Ashley, James Island and Johns Island and is a separate and distinct project from the I-526 Lowcountry Corridor which proposes improvements to the existing I-526. The WEST portion is from Paul Cantrell Boulevard in West Ashley to Virginia Avenue in North Charleston and the EAST study is from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. I am copying the Mark Clark Extension project email address here to share your comment as this project is also in a formal comment period through October 15. If you did not intend for it to be for the Mark Clark Extension, please just let us know. Thank you again for your participation and engagement in the process. - The I-526 Lowcountry Corridor Project Team	Email	10/13/2022
PIMW#12	October 12, 2021 at 7:01 pm	Two things to keep in mind: 1) An alternative that utilizes the shoulder as additional lane space during rush hour is a bad idea because all it takes is one wreck with no emergency vehicle access because the shoulders are otherwise occupied and everything gridlocks for hours. 2) The existence, and growth, of East Cooper Baptist Church and Seacoast Church off of Long Point Road make that exit a popular destination on Sundays and Wednesday evenings, particularly during the Wednesday evening rush hour. Of the Long Point options I saw, the ones that sort of reroute truck traffic heading for the port off to the side seem the least messy in regards to vehicular flow during Wednesday evening rush hour. Just my two cents of course.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. All of the proposed reasonable alternatives include widening to 8 lanes, 4 travel lanes in each direction with 12 foot inside and outside shoulders. If shoulder use during peak travel times is incorporated in order to improve e operations and reduce congestion, an active traffic management system would be part of that system. An active traffic management system utilizes overhead signs every half mile in order to alert drivers to lanes which are open or closed for travel and can also regulate speeds and provide other important driver messaging. This video provides some demonstration of this system if you have not driven on a roadway with this type of technology: https://www.youtube.com/watch?v=kEVSpGFTgzc. The proposed wider footprint with more lanes along with the new technology of smart roads will allow traffic to continue moving without closing all lanes during incidents. The current configuration is narrow and typically does not allow enough room to process serious crashes safely without blocking all lanes. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW	Oc 14 20 pr	October 13, 021 at 8:55 m	I am opposed to the I-526 extension, I support the No Build alternative. We should be focusing our limited transportation resources on smart, equitable, and multimodal solutions that would benefit our entire region.	Good morning, Catherine. We appreciate your comment submission but believe based on your comment it was actually intended for the Mark Clark Extension project. I have included their email address in this message and the website can be found at www.SCDOTMarkClark.com. The I-526 Lowcountry Corridor project proposes improvements to existing I-526, whereas the Mark Clark Extension proposes new roadway to connect West Ashley, Johns Island and James Island. Can you please confirm this is your intent so that the Mark Clark Extension project includes your comment in their records? Thank you - The I-526 Lowcountry Corridor Project Team	Email	10/14/2021
PIMWi		021 dt 2.55	I wanted to voice my opposition to the I-526 extension. Charleston is a great place to live because of its natural beauty. Not only will the extension be an eyesore, it will harm the environment creating mor problems than it solves. I agree with those who argue that blindly expanding road infrastructure creates more traffic in the long run even if it relieves traffic in the short run. We'll end up with a giant ugly slab of concrete running across our beautiful marshland that will solve nothing while costing millions of dollars that could of been spent creating bikelanes, expanding public transit, or encouraging development of walkable communities.	Daniel, Good afternoon. We appreciate you submitting a comment for the I-526 Lowcountry Corridor EAST. However, based on your comment, it looks like you are trying to comment on the Mark Clark Extension project, a separate and distinct project, which would connect I-526 in West Ashley to James and Johns Island. More information on that project can be found here: www.SCDOTMarkClark.com. I have also CCd that project's email address to e provide it to them. However, please confirm that this is your intent. The I-526 Lowcountry Corridor projects are focused on improvements on existing I-526. The WEST project proposed improvements from Paul Cantrell Boulevard in West Ashley to Virginia Avenue in North Charleston. The EAST study proposes improvements from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. Thank you - The I-526 Lowcountry Corridor Project Team	Email	10/14/2021

PIMW#16	October 14, 2021 at 4:51 pm	Dear LowCountry Corridor :10/14/2021 These are My Points: 1. There is a Major Design Failure on I-526: Between Rivers to Mt Pleasant: if all lanes of either East or West bound are totally blocked due an Accident-Traffic can not be Re-Routed to opposite Lanes. 2. Traffic Gridlock could be immediately Reduced Now if We look at My suggestions made on 1/4/2021 3. Encouraging Work at Home 3. Flexible Work Hours-According to the Council of Government 2040 Traffic Plan If there is a 11% switching from Driving from Peak to Non-Peak Times, there would be No Gridlock 5. Encourage Car-pooling by using App "LowCountry Go" 7. Recognizing Companies and Organizations that Reduce Traffic Gridlock just as Adopt-A-Highway is For Instance, Verizon Closed Their Call Center but their Employees work At Home Recognize Verizon for Doing This. 5. Encourage Leaders of Companies And Organizations to Encourage Their Associates to Reduce Traffic Gridlock by Suggestions 2A- 2E am available to Discuss in More Detail My Suggestions	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/21/2021
PIMW#17	October 16, 2021 at 7:50 am	want to know more details about the relocation of homes. I live on Chimney Bluff Drive and any of these plans will impact my home. If relocation is done, how are home owners compensated? What's the ime line.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information being presented at this meeting is for a planning study and no actual projects have yet to be funded. Thus there are no schedules associated with these future improvements yet. More information will be available in the future regarding projects that may potentially be funded. We would anticipate that there may be an interchange improvement at Long Point Road / Wando funded first, but other widening projects would be prioritized after the improvements being developed at the I-26 / I-526 interchange which would not be completed until 2032. Your location appears to be at the Long Point Interchange. The interchange models being analyzed at this time are outlined here: https://www.526lowcountrycorridor.com/wp-content/uploads/2021/10/Long-Point-Road-and-Wando-Port-Interchange.pdf. Once an actual project is funded, we will develop more detailed design concepts and bring these back out to the public for comments. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/21/2021
PIMW#18	October 16, 2021 at 2:52 pm	Regarding the Longpoint rd interchange option two seems best for my neighborhood (hidden cove). Having the trucks avoid all of the neighborhoods and commercial and retail businesses by routing them parallel to Longpoint seems best. Then cars and trucks would not need to interact until 526	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. We will be advancing additional traffic analysis on the Long Point / Wando Interchange alternatives over the next year and will be coming back to the public for comments once the project is initiated in the environmental phase. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIMW#19		On the subject of reflective lane markers I would like some information on the true cost of these markers to the tax payer and the environment. 1. In the past 6 months I have collected a large bag of loose markers from the bike lane on my 10 mile commute to work. No fun to hit them as it can result in a pinch flat or a fall. I will bring the bag to the public information session. 2. I have heard estimates of 1 million of these being placed on SC roads every year. Please provide and accurate number of how many have been purchased over the past five years and the total cost of the product and installation. 3. I estimate there are roughly 6000 of these markers between Virginia Ave and Clements Ferry. By counting the left over epoxy where previous reflectors once were you can see they have been replaced about six times. Most of these dislodged reflectors end up in the Cooper River. 402 of plastic, each equivalent to 100 single use bags. This is plain and simple littering by SC law. We can do better. 4. On 195 there are a different type of marker, not held by adhesive , they seem to stay put. Please provide comments and accurate figures if my estimates are incorrect. Thank you	Interstate Routes Replacement cycle: Annually Mileage: 850 miles (average – varies with construction activities) Number of markers placed: Approximately 200,000 Average cost per marker: \$3.25 installed Higher Volume Primary and Secondary Routes Replacement cycle: Every 3 years with markers on 1/3 of the qualifying route replaced each year Mileage: \$700 miles (average) Number of markers placed: Approximately 700,000 Average cost per marker: \$2.75 installed Surface mounted raised markers represent of the most cost effective traffic control devices at our disposal. The average cost to install yellow bi-directions markers on a two lane road (80' centerline spacing) is around \$200. Of	Email	10/22/2021
PIMW#20	October 19, 2021 at 7:49 am	I have some comments and would like some information on the reflective lane markers that are placed on the roadway with adhesive. To help the public understand the true financial and environmental costs of these markers. 1. Please provide the total number of these plastic reflectors that have been purchased by the state in the past five years along with the total cost of contracts to place them. 2. In just the last 6 months I have collected a large bag of these reflectors from the bike lanes on my 10 mile commute to work. They are a hazard that can result in a pinch flat or fall if your hit them on a bicycle with narrow high pressure tires. I will be bringing this bag of markers to the public information session. 3. I estimate there are 6000 of these markers on 526 between Virginia ave and Clements Ferry rd. Looking at the circles of adhesive left from markers that have come lose you can see most them have been replaced 5-6 times. Most of these markers end up in the Cooper River. Each marker is 4 oz of plastic, equal to 100 single use bags. This is plain and simply littering by SC law. Even the markers that don't directly fall in the water will eventually break down and end up there in the form of micro-plastics. 4. On 195 the markers are a different design that seem to stay attached. Why are these not used on all roads rather the markers that keep coming lose?	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Our Traffic Engineering Department manages the reflective raised marker program, so I have reached out and secured the following additional information for you in order to answer your questions: Raised markers are systematically replaced on South Carolina roads under two programs, one for interstate routes and one for higher volume primary and secondary routers. On the interstate routes, raised markers are replaced on an annual basis. On the higher volume primary and secondary routes, they are replaced about every 3 years with approximately 1/3 of the markers replaced each year by annual contracts. The cost of a raised marker installed averages about \$3.00 each. It is typically a little higher for interstate routes due to the increased exposure risk to the contractor. That includes removal and disposal of the existing markers and placement of the new markers. The same markers, adhesives and placement methods are specified on all the contracts, although the quality of the installation can vary with contractor and the condition of the road surface. Following is some general information about each program: Interstate Routes Replacement cycle: Annually Mileage: 850 miles (average — varies with construction activities) Number of markers placed: Approximately 200,000 Average cost per marker: \$3.25 installed	Email	10/22/2021
PIMW#21	October 19, 2021 at 11:40 am	As a resident in the Belle Hall neighborhood whose house is on Historic Dr, we have followed this project closely. Our biggest concern from the beginning is "What will be done about the noise?" The surging levels of traffic and trucks to the port terminal have created such a detriment to the quality of life for residents along this portion of 526, and it will only get worse. From the houses shaking when trucks blow tires coming off the down slope of the bridge to the motorcycles that love to race up the bridge late at night, all this leads to a horrible situation for homeowners in this neighborhood. While the material above says that NOISE was the #1 complaint heard from residents during the survey period, there isn't any information contained above that tells what is going to done about it. Please communicate this!	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. The information being presented at this stage is a planning study to identify the traffic issues on the corridor and evaluate which improvements may improve the traffic operations on the corridor. The planning study will recommend potential projects with cost estimates that may be funded out of this study. We do not know when projects will be funded yet. Once the projects are funded, then the Environmental phase of work will initiate which will further detail designs and include a noise study at that time. The design being presented now are conceptual level designs and we would have to have more detailed design in order to conduct the noise study. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/21/2021

PIMW#22	2021 at 5:06 pm	It appears that Option 1 would be the least disruptive to private property and Homes I'm not in favor of Option 2,3 or4 as this would seem to disrupt neighborhoods, homes and add tremendous noise and disruption of current neighborhoods. Also, please include details about a NOISE WALL along 526 as you increase the number of lanes or choose to implement one of these options please consider a Noise wall all along the section of 526 and Seacoast Parkway if you plan to do any of these options	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. We will be studying noise abatement along the corridor during the next phase of the project development, during the environmental phase of work for the project. In future public meetings we will present this information for public comment. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/21/2021
PIMW#23	October 24, 200	As a commuter who uses 526 to travel from West Ashley to Daniel Island, this is a welcome change that is needed. However, I would like you to consider adding a bike/walk/alternate transportation path a part of the Don Holt replacement. Once (if) the Northbridge is replaced and if there is a bike access across the Cooper River, then West Ashley to Daniel Island would be connected for bicyclists.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. All of the preliminary alternatives being considered in the I-526 LCC East study include a 14 foot wide shared use pathway across the major rivers. For the Cooper River/Don Holt, the pathway would start at the North Rhett is interchange and be connected to the pathways under construction on Clements Ferry Road. This pathway is also included across the Wando River on the John Edwards Bridge making connections between existing pathways in Daniel Island and Mount Pleasant. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/25/2021
PIMW#24	October 24, 2021 at 10:43 am	Is induced demand not considered?	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Regional traffic models, as well as rush-hour observations, indicate that because of congestion, commute times have increased. The primary result of adding more lanes would be reduced travel times for those currently using I-526. Those currently using other, longer routes for their commutes, because of the congestion and frequency of crashes on I-526, may choose to use I-526 in the future. This hidden or built up traffic demand consists of trips that are not new, but will be attracted to I-526 with added capacity. This is accounted for in the project's future traffic forecasts. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIMW#27	2021 at 8:38	Traffic on Long Point Road due to the terminal is already a problem for those of us who live in the neighborhoods on that side of 526 (Hobcaw Creek and Hidden Cove). I think a dedicated port access road for port traffic, as shown in option 2 for the Long Point/Wando Port Interchange is the best option for both the residence in the area and the port traffic which will have an easier time getting in and out of the port.		Email	10/25/2021

ID	Entry Date	Comment	Response	Response Format	Date of Response
PIMW#28		Since I live inside Hobcaw Creek Plantation, I vote for option 2 for the Longpoint Road/Wando Terminal interchange. To have a dedicated ramp just for trucks coming and leaving the Terminal will alleviate the congestion at the traffic signal at the entrance to Hobcaw Creek/Wando Park Blvd. and Longpoint Road. I hope you will consider and implement Option 2.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. We do believe that the options that create a new partial interchange at Long Point (such as option 2) will perform the best once we do more detailed traffic modeling in the next phase of work. We are required to study a range of alternatives (some that just improve the existing Long Point Interchange) in order to provide a comparison of alternatives to demonstrate which one operates best while balancing the local impacts. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/25/2021
PIMW#29		Highly in favor of Option#2 for Longpoint intersection. We need dedicated truck access to the port that does not impact neighborhoods built over 2 decades ago when the port was much smaller. Noise: a) Need a sound barrier on the South side in Mount Pleasant to protect neighborhoods of Hobcaw and Wacendaw b) Propose that the town of Mount Pleasant ban the use of air brakes / Jack brakes to further reduce noise impacts.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).		10/17/2022
PIMW#30	2021 at 11:12	I am in favor of the following: * Long Point Road / Wando Port Interchange - Option 2 which is a truck bypass lane from the Port to 526, which will dramatically reduce the truck traffic on Long Point Road * A sound barrier wall along 526 where the highway is adjacent to neighboring sub-divisions.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. We will be studying noise abatement along the corridor during the next phase of the project development, during the environmental phase of work for the project. In future public meetings we will present this information for public comment. PIMW#31	October 25, 2021 at 12:22 pm	and from 1526 is pushed closed to the port on Long Point Road, there is no longer a need to modify the Hobraw Bluff lanes or signalling. Saves money and makes residents hanny a win win. Our entire	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. SCDOT did a study in 2019 on restriping the interstate to 3 lanes on the Don Holt to the I-26 interchange and/or the N Rhett Interchange. The safety analysis indicated an increase in serious crashes due to the loss of shoulder in this area so this interim improvement option was eliminated. With coordination with the SC Ports Authority, there are no plans to significantly decrease truck traffic from the Wando Port to the new ports. The new ports are to expand the ports container capacity in the state. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/28/2021
PIMW#32	October 25, 2021 at 5:05 pm	Truck traffic from SC's busiest port (Wando) seems to be the driving factor behind many design decisions. Truck is one of the most inefficient ways to transport containers. Has rail access to the Wando Terminal been examined? It would seem incredibly shortsighted to leave the most efficient means of moving goods on land out of the conversation.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. SCDOT conducts ongoing coordination with the SC Ports Authority and your local transportation planning organization in order to ensure that these projects will work towards a larger regional transportation plan. https://www.bcdcog.com/. Port improvements including rail access improvements and/or inland ports are not typically funded through SCDOT. The legislature provides funding for improvements directly to the SC Ports Authority. We will look into additional modeling and coordination on this effort as a result of these comments in order to provide a more detailed response to this question as we move forward in this study. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountryCorridor.com/east), or by visiting our Community Office,		11/8/2021
PIMW#33	October 25, 2021 at 5:25 pm	1.) For Section 2 there is no description as to why adding a new 4 lane bridge (North or South) along with the existing bridge (which is 6 lanes) does not handle as much traffic as 2 new 4 lane bridges. 2.) In Section 3 why move the East bound exit lanes to Long Point Road and increase the radius of the East bound on ramp from Long Point South bound? I understand the increasing the radius will allow faster traffic flow, but that ramp is rarely used by Tractor Trailers which would be the primary beneficiary of the increased radius.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Additional traffic studies will be performed in the next phase of work. The I-526 Bridge over the Wando River was evaluated during the planning study based on whether widening of the structure was feasible and whether there was enough remaining useful life to utilize the existing bridge into the future alongside a new structure. The results of that evaluation indicated that the most feasible option, given the potential timelines for project completion in the future, would be to replace the I-526 Bridge over Wando in all alternatives. The Long Point Road interchange was identified as an interchange on the necorridor that needs operational improvements. A number of improvement alternatives would be studied as a part of that future project. We are required to study a range of alternatives including making improvements to the current interchange model to meet today's standards. More detailed traffic analysis to evaluate and compare	Email	11/8/2021
PIMW#34	October 25, 2021 at 5:29 pm		Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#35	Octobe 2021 a pm	at 5:45	think both need work on them but I don't see how lowering the Wando is helpful for future development that may happen past that bridge. If anything maybe lower to 100 feet high but not the bare inimum of 65 feet.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. When bridges are replaced, widened or altered in a project over a navigable waterway, then a navigational study is performed as a part of the project development. This study helps to identify the navigational uses and needs of the region in this particular waterway. Once a project is funded for this bridge, then the study will be performed and provided to the US Coast Guard for review. We will coordinate with the US Coast Guard to determine the minimum bridge height requirements for this waterway. Additional information will be presented to the public on this proposed height during future public information meetings. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located	Email	11/8/2021
PIMW#36	1	ber 25, at 7:18 l I	think a parallel route along with 1-2 additional lanes to each direction of 526 should be seriously considered.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. New parallel routes to I-526 were considered in the preliminary regional traffic analysis. However, these routes did not pull enough traffic off of I-526 to relieve the congestion as a standalone regional congestion improvement. The interstate system is our lifeline route for the region and must be managed to operate efficiently and safely. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	11/8/2021
PIMW#37	Octobe 2021 a am	at 12:25 C	an these changes include moving the N Rhett on-ramp to 526 east to the opposite side of N Rhett from where it is now? Having eastbound and westbound on ramps on the same side of N Rhett is a ightmare every morning. People race up on the middle lane and expect to be let in by the people that legally got in the correct lane. Please consider this change. Thank you!	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will burn so scDOT will burn to maintain impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The I-526 Lowcountry Corridor WEST Project includes interchange modifications at the North Rhett Interchange which is in the project development phase for construction in 2027. For more details on the proposed improvements at this interchange visit: https://www.526lowcountrycorridor.com/west/#Alternatives Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW#38	2021 at 6:22	Once again using huge amounts of taxpayers money for a temporary fix. By the time it's finished it would be inadequate. Deal with the REAL problem, container trucks and 18 wheelers. Build a highway in and out of town (allowing trucks access to i26 well out past Summerville. Take the trucks off off 526 and I 26 close in	Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details or potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Planning for the future is a part of the process with any highway project. For more information on how this fits within the planning process, please check out our educational video: https://www.youtube.com/watch?v=hCCi3xquf-o&t=6s. The existing 1-526 infrastructure does not currently support enhancements such as bus lanes or other strategies which would enhance transit in the region. However, all of the proposed alternatives would be planned with the future of Traffic Systems Management & Operations in mind. For some of the preliminary strategies evaluated in this planning that will carry forward if projects are funded are available here: https://www.526iowcountrycorridor.com/wp-content/uploads/2021/10/Transportation-Systems-Management-and-Operations-Options-2.pdf. In order to create a better public transportation system, many of our roadways will need some improvements in order to support these accommodations. The proposed Lowcountry Rapid Transit project is a key first step toward this plan: https://www.bcdcog.com/	Email	11/8/2021
PIMW#39	October 26, 2021 at 6:33 am	None of these plans address the problem of trucks from the port traveling on 526. The posit is responsible for much of the congestion in 526 and the damage to the roads. We must get the trucks off this road!! The trucks also need their own entrance/exit to the port and this needs to be paid by the port.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#41	October 26, 2021 at 7:31 am	Why would you not complete the 526 over into Johns Island first? Savannah Hwy from West Ashley to Main Road is a nightmare constantly. All the traffic getting onto Main Road daily ties up Savannah Hwy for miles and miles, which is a nightmare for all the residential areas on Savannah Hwy, not to mention the horrific pain it is to travel north and south on Savannah Hwy (one of the main arteries) with this constant traffic and grows daily from all the new comers moving into the area. This was to be done years ago and our funds raised for it was not utilized for the project! Johns Island will continue to grow regardless of what you think, so it's time to have a better infrastructure to accommodate all the traffic problems	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#44		I 100% agree highway 526 needs to be expanded and both bridges need to be replaced. My biggest concern is the Long Point Rd. / Wando Terminal Interchange, it's hard to determine which alternative wi reduce the backup caused by trucks exiting today. I've spent a lot of time at that exit when 526 has only 1 lane available because all the trucks are backed up onto 526 trying to exit. It appears to me like option 2 for that interchange may help the most, but can a study be done to see at peak truck exit times to see how each option performs?	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. You have been added to our mailing list for project updates. If the information being presented in this meeting is part of a planning study and the recommended projects are not yet funded. Once the projects are funded, then additional traffic analysis and design will be performed to compare the alternatives in more detail. That information will be presented in future project information meetings. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW#45	2021 at 8:12	This will be a much needed improvement to traffic control through this corridor. If 3 lanes are being proposed, then I hope there would be a mandatory requirement that all multi-axel trucks must stay in the far right lane only. Enforce with camera generated fines if necessary. Fire and medical rescue can be highly impacted by clogged lanes generated by slow moving trucks using all lanes as they currently do. This contributes to the accidents that shut down the current road and poses risks to all citizens.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. PIMW#51	October 26, 2021 at 9:14 am	Though this section of road is a terrible chokepoint for all drivers, we need to extend the 526 on to Johns island before upgrading the current roads! That debacle is more than 20 years in the making as it is and needs to be finished first! I do agree that merging the 526 from 3 lanes to two lanes on the don holt bridge is a major bottleneck just before the papermill. Merging trucks and increased port traffic will only make matters worse. Is there an opportunity to have containers loaded on to rail cars and then sent to a distribution center outside of Charleston? perhaps Orangeburg; an area 60 miles to the west. Barely any trucks are leaving our port and heading north on hwy 17; I'd bet that 90% head up 126 to inland locations.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The Mark Clark Extension is a locally funded roadway, SCDOT does not have funding for new alignment roadways currently. SCDOT and your local Transportation Planning organization conducts ongoing coordination with the Ports Authority to identify alternative transportation plans for freight movement in the state of SC including inland ports and rail. Funding for port improvements, such as inland ports, do not typically flow through SCDOT but flow from the legislature directly to the SC Ports Authority. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW#52	October 26, 2021 at 9:31 am	We need two things on 526: resurfacing and more police/patrol presence to slow down speeders. We need these two things desperately.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. SCDOT is managing the pavements with consideration of the future widening projects. If you can provide more information about the sections of the roadway that you are concerned are in need of some repairs, then I can check with maintenance and let you know if we have planned improvements. We typically would implement short term improvements at this time, while planning for larger reconstruction of the pavements in the widening project. SCDOT does not have authority over the highway patrol presence on SC roadways. We would encourage you to contact the SC Department of Public Safety with any concerns over patrols. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/26/2021
PIMW#53	October 26 2021 at 9:44 an	I have lived in Hobcaw Creek Plantation off Long Point Road since I was 4 years old. A location that is near and dear to my heart. I love the area and neighborhood so much that my husband and I decided to buy our own home in the neighborhood to raise our 3 children. I am now almost 37 years old so I have been a first-hand witness to the growth of the area around 526 and the Port. While I understand the economic importance of the Port, there has to be a harmonious relationship. The sheer volume and throughput of the Wando Port has grown by leaps and bounds and continues to. Long Point Road was not built to withstand this. The neighborhoods West of 526 at Long Point Road have to deal with day in and day out the dangerous and downright infuriating actions of the truckers leaving the Wando Port. The high rate of speeds and disregard of basic traffic laws seen from these truckers is a blatant disrespect to the surrounding neighborhoods and frankly a disregard for human life. It is an ABSOLUTE mirround that the surrounding neighborhood is an advantage of the neighborhood entrance intersections because of this. And sadly I feel it is only a matter of time before a serious accident involving one of these truckers occurs. It is my wish and request that a dedicated exit or access to the Wando Port be created to let these maniacs (truckers) play "chicken" with each other and not the lives of our families, children and neighbors. Option 2 for Long Point Road/Wando Port Interchange appears to be the best option giving the Port an exit dedicated to them diverting the masses away from the residential areas. A noise barrier is also much needed to dampen the sounds created from the mass of trucks and vehicles converging on the Long Point Road/526 corridor area. There are only so many plants, trees and fences with makeshift sound absorbing materials that can be put up before enough is enough. I appreciate your time and consideration in helping make this project as meaningful and impactful as possible. Thank you! A Concerned		Email	10/26/2021

PIMW#54	Octo 2021 a	ober 26, at 10:08 am	All the proposals call for lowering the Wando River bridge. Lowering the bridge would increase noise levels to nearby properties and disturb the views of properties along the river. Was an option considered that maintains the current height of the bridge? If not, would you consider an option like that.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Bridge height is something that is determined in coordination with the US Coast Guard based on navigational River uses and needs in the region. The Wando bridge height will not be determined until additional navigational studies are performed in the next phase of work. The results of those studies will be provided to the US Coast Guard for a determination of the bridge height. Noise studies will also be conducted in the next phase of work which will provide a measuring the noise levels on the current corridor (and associated bridge height) as well as modeling how those noise levels may be impacted by the new roadway and bridge construction and travel patterns. The results of all of these studies will be presented to the public for public input at that time. If the noise levels are undesirable, then a range of noise mitigation options would be explored and modeled to determine which is the best option. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/26/2021
PIMW#5	Octo 2021 a	ober 26, at 10:09 am	A Cheap easy way to make short term improvements is to get rid of the 3rd lane on the 526 bridge over the cooper river. The use of it by trucks going slower is negligible compared to people trying to go faster. The back up from merging from 3 lanes back to 2 lanes causes a delay every day.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. SCDOT performed a safety and operational analysis for implementing interim improvements on the I-526 EAST corridor in 2019 which did include an option for removing the truck lane over the Cooper River. All of the interim improvement options resulted in a decrease in safety and operations on the corridor so these options were not pursued by SCDOT. The I-526 WEST Project which will go to construction in 2027, does include improvements at the North Rhet interchange which will include connecting the truck lanes to the widening associated with the I-526 WEST Project. While it will take some time to get this project open to traffic, it should provide some incremental improvement in operations on the EAST corridor. Please let us know if you have any further questions or concerns by sending us an email (info@526i.owcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/26/2021
PIMW#5(at 10:10	Thank you for this information. I fully support replacing both bridges as recommended. I would however suggest trying to limit the impact of the longpoint road interchange changes, particularly avoiding needing to relocate homes. In particular, Option 4 should be set aside as impractical in my opinion. No one in that area is going to want the highway or ramps closer to their homes, but that appears to have the most impact. Thank you for your hard work on this - I am glad to see this project hopefully move forward.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. The interchange alternatives for Long Point Road are preliminary alternatives and in the next phase of work will be further developed and traffic performance and impacts analyzed. We must include alternatives for improvements at the actual Long Point interchange in order to provide a comparison to the creation of a new adjacent partial interchange (options 2 and 3). In the next phase of work, we will be able to show comparisons of the performance and impacts of each alternative in more detail for alternatives analysis. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). Email	10/26/2021
PIMW#58	2021 at 11:16	Before fixing Longpoint/526 interchange, there needs to be improvements at North Rhett exit. The exit backs up onto the interstate daily going west. There are a minimum of 2 schools with students from around the tricounty area descending on this exit, along with trucks. Because there are two lanes off the exit, both lanes accomodate left turns, leaving cars who need to go right to school, on the interstate. It is a mess daily and there is no comparison to this exit and Longpoint Road. I take Longpoint daily and it is not an issue. But North Rhett is a daily mess.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Improvements at the North Rhett Interchange are included in the I-526 WEST Project which will go to construction prior to the I-526 EAST projects. The North Rhett interchange is connected to the elevated section of interstate connected to the I-526 and I-26 interchange so it will take some time to complete the construction on this section of roadway. The WEST project will go to construction in 2027. We do anticipate that the Long Point Interchange would be the EAST project, since it is a project that could provide some operational improvements before the widening can be implemented. The widening on the EAST segment would not be able to go to construction until the widening on I-526 between I-26 and Virginia avenue is completed on the WEST project. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).		10/26/2021
PIMW#59	2021 at 1:47 pm	From the get-go, I want to emphasize that I stand firmly opposed to this project in its current form. Anyone with a web browser could easily learn that building urban highways does but destroy homes and businesses, divide communities, and create greater volumes of traffic over time. Yet, this department runs gleefully towards any proposal that sees miles of asphalt as the solution to our problems. I want to live in a community where cars are not the only feasible way to travel. I want a metro area where walking, binking, and transit are considered the default modes of transportation. Why should we spend what essentially amounts to the cost of the ENTIRE Lowcountry Rapid Transit project per MILE when we know that widening highways will only commit us further to a broken system? Keep the bike/ped bridges and build a rapid transit line along the route. Save our money and fix our traffic; that's what you're here for.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. With the growth and future travel demands in this region, SCDOT knows that simply adding capacity is not going to be the sole, long-term solution for congestion in this corridor. However, there are many basic infrastructure needs that must be addressed in order to implement new technologies known as "Active Traffic Management" and other technologies which enhance transit and alternative travel choices. These strategies, such as variable speed limits, ramp metering, managed lanes, bus lanes, and opening up shoulders during peak times, not only require additional lane capacity, but also other new infrastructure such as upgraded electrical systems and internet capabilities. The current alternatives presented "pave the way," quite literally, for these types of future alternative traffic management strategies. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIMW#60	Octol 2021 :	ober 26, L at 2:30 pm	The problem is not the size of the roads, it's the trucks from the Wando terminal. The Leatherman port was made intelligently - with rail and I-26 access. 1) TODAY Restrict truck traffic to the outside lanes only. 2) Restripe and widen the route to 3 lanes each direction. Both bridges are already sized for 3 lanes. 3) Enlarge 526 from Cooper river to I-26. 4) Move the port to the Cooper River with access to I-26. 5) Build a 4 mile tunnel from the Wando terminal due west under both rivers to I-26. That is only \$300M/mile and no disruptions.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Truck traffic cannot be restricted on a facility with only 2 travel lanes in each direction, as this would limit passing operations for these vehicles. In the proposed improvements, the additional lanes would allow more operational flexibility and trucks would be restricted on the inside lanes of the interstate. An interim improvements study was performed in 2019 to determine whether a restriping of I-526 between I-26 and Clements Ferry Road was feasible. The safety analysis indicated that this proposed change would result in an increase number of serious crashes on this roadway, and thus this proposed improvement was eliminated as an option. The I-526 Lowcountry Corridor WEST Project is underdevelopment currently and proposes to widen I-526 from the Virginia Avenue interchange to Paul Cantrell Blvd, including interchange improvements at the I-526 & I-26 interchange and North Rhett Interchange. For more information on this proje	Email	11/8/2021
PIMW#61	Octol 2021 :	ober 26, Lat 4:41	Unfortunately, I have to miss the in person meeting on 10/26/21. As a homeowner and resident of Etiwan Pointe off of Wando Park Blvd., the alternatives for Lowcountry Corridor East are not favorable. Aside from cutting off parts of the neighborhood and certain homes, what would be left is too close to the homes that would remain and would most likely significantly diminish property values and re-sale in the future. I know these are concepts and this is only if funding happens one day. Regardless, if some homes are bought for the project, why not all? What you would leave people with would not be useful. Thank you and I look forward to future meetings.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW#66		My family moved to Mt. Pleasant in 2019. Due to the pandemic, we are just beginning to make friends in our neighborhood and feel at home. This community has now helped us through the birth of our second child, the death of a loved one, and the young growth of my 3 year old son. This sentimental value, coupled with the sharp increase in property values in our are leaves us with the belief that if we are relocated we might have to leave Mt. Pleasant altogether. How do those behind this project plan to mitigate this tragic situation for my family? Comparable homes in the area may be close to 1M\$. What can be done here?	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#75	2021 at 6:58	ust a couple comments based on my experience driving on I526 East between Daniel Island and Mount Pleasant and other local roadways: 1) Is it possible to create a separate off ramp for semi traffic exiting IS26 East onto Long Point Rd? (I couldn't tell from the diagrams if that was an option being considered.) 2) I like the diagrams of the proposed new Wando bridges, one in each direction. Please be sure to include a lane for disabled vehicles to be able to pull off the road; this is missing on the Ravenel Bridge.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Two of the Long Point Interchange alternatives include 2 alternatives which include a new partial interchange flyover ramp which would create access to the Wando Port and the Western end of Long Point Road prior to the Long Point Interchange. All of the widening and bridge alternatives include 12 foot inside and outside shoulders which are required for the heavy truck volumes on this corridor. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/28/2021
PIMW#76	2021 at 10:06	support full bridge replacement, adding 2 lanes each way to I-526 and redesign of the Long Point interchange. However, I also believe that a quick feasibility assessment of bringing rail to the Wando Port ihould be conducted. It would require a separate bridge across the upper Wando or it could be integrated into the I-526 design. This would take the truck pressure from I-526 and provide much greater container transport capability than the use of trucks. Adding rail would also decrease pollution and congestion by getting trucks off the road (although using electric powered trucks would also help).	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. SCDOT will further coordinate with the SC Ports Authority as the projects move forward to determine the feasibility of shifting some container traffic to rail and how this would potentially impact the truck volumes on the corridor. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/28/2021
PIMW#77	2021 at 12:40	The Don Holt and Wando bridges are already 6 lane. By adjusting the lane striping on the approaches and adding a center lane into the median where necessary there would be an immediate improvemen traffic by eliminating the bottleneck areas. This could be done immediately and for a much smaller price tag. The larger expansion might be postponed or eliminated with this improvement, especially if he Wando Terminal shifts truck traffic to Leatherman or Jasper terminals on the west side of the Cooper and Wando rivers.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. SCDOT did a study in 2019 on restriping the interstate to 3 lanes on the Don Holt to the I-26 interchange and/or the N Rhett Interchange. The safety analysis indicated an increase in serious crashes due to the loss of shoulder in this area so this interim improvement option was eliminated. With coordination with the SC Ports Authority, there are no plans to significantly decrease truck traffic from the Wando Port to the new ports. The new ports are to expand the ports container capacity in the state. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIMW#78	2021 at 2:	Im strongly supportive of this plan to rebuild a new Don Holt (best change the name too) and Wando bridges with more east and westbound lanes. Probably like the Ravenel Bridge as it was much needed with more lanes when built those years back to replace the narrow Cooper River Bridge to accommodate the increased traffic flow. By doing so, this will prevent traffic delays from disabled vehicles and so many daily wrecks on Don Holt. Now Wando dosen't have many wrecks as Don Holt to say the least, but Don Holt bridge is undoubtedly cursed in my opinion with constant traffic tie-ups from blocked lanes anytime during the day.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/28/2021
PIMW#79	2021 at 5:	Would like to learn more about the No Build Alternative and what the specific congestion and congestion-related crashes would be in comparison to the proposed alternatives. Was a multi-modal transportation alternatives were considered? If so, what were the results? If not, why? Is there an alternative that creates a dedicated, divided lane (and possibly a bridge span) each way (with safety shoulder) dedicated ONLY to trucks going to and from the port? If this two-lane dedicated (a built in would relieve congestion on I-526 and eliminate the need to build an additional 2 new bridge spans. Has a dedicated rail system been considered strictly for moving containers from the Port to an off-on loading facility near River Road, removing port trucks entirely from I-526? This would substantially increase the capacity and longevity of the existing bridges and highway? Is there an alternative that keeps both bridges and builds only one additional span (rather than two new ones), turning the existing bridges into one-way and the new spans into the other direction? What are the specific wetland and forest impacts. Which alternative minimizes these impacts?	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting, We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Once the projects are funded and enter the project development phase, additional more detailed traffic studies will be performed including Safety Analysis which would provide more information about the safety or crash related projections for each alternative including the no build. Lane assignments for better management of specific traffic volumes (such as trucks, buses or High Occupancy Vehicles) would be studied further in the next phase of work on the project. The initial traffic analysis shows that there is a need for additional lanes, and further analysis and modeling of various lane usages would be considered in the next phase of work in order to maximize the congestion relief. Any truck isnes would be integral to the intersate facilities. There is one in the project development phase in Dorchester County for this purpose. SCDOT will continue to coordinate with the Ports on these expansion of these expansion confirmation w		11/8/2021
PIMW#80	October 2 2021 at 9: F	3, 8 I support a dedicated access road to the port from 526 and option 2. PIMW#81		A mober 29, Pl 1 at 5:21 pm Ri ke	isood day, Ilthough I can acknowledge the need for improvement of the Lowcountry corridor, widening or adding lanes to absorb the increasing traffic will inevitably increase NOISE pollution. What is considered to inimize the impact? There needs to be some solutions implemented to preserve the quietness of the surrounding residential areas (Noise barrier walls, low-noise road surface or even lowering speed). lease seriously take that aspect into consideration. egarding the long Point / Wando Port interchange, with no doubt, the container traffic will keep growing, and LongPoint road is already close to saturation. Option 1 is unlikely to be sufficient and will eep adding traffic, option 4 would just add more traffic and nuisance to the neighborhoods. Option 2 represents the best option and the most efficient solution as it would allow the trucks to have direct coess to the Wando terminal from 526, while preserving the neighborhoods on Long Point. hank you for giving the opportunity to give my input.		Email	11/8/2021
PIMW#82	Octo 2021	ober 31, 1 at 4:10 pm	option 2 for the Long Point/Wanda interchange looks like the best option. Directing the truck traffic off before the normal long point exit around residential areas would seem to help both the shipping ompanies as well as residents like my self.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. You have been added to our mailing list for project updates. PIMW#88		ovember 1, 021 at 1:47 pm	The where, when and how of the project for I-526 is not my knowledge level. But the NOISE has got to be controlled! Whether it is 1 lane added or 4 lanes added noise levels are going to increase. Currently, the noise levels during normal work hours and work days in the Cameron Terrace area is unbelievably loud! There is nothing to mitigate current noise. A few oak trees and scrub brush. But mostly weeds that die off in colder weather allows more noise to filter out into the neighborhoods. So a concrete sound barrier/deflector is severely needed now and in the future of this highway. At nightfall traffic thins down and the noise level decreases to a more livable level until the next work day. I will say that who ever left the vacancy sign out had to be playing a joke! There is no vacancy in the metropolitan Charleston area! Thank you for allowing me to comment.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. Email	11/8/2021
PIMW#97	Novemb 2021 at	Option 2 seems to be the only option that would allow for the increase in traffic from the port. Option 1 is what we have today and clearly does not work, option 4 yes is a high flow intersection but it does not work with slow heavy trucks to that need time to get up to speed. Option 3 just compounds the issues with long point today and creates and even more bottle neck into wando park drive. The port needs direct access to the port just like they did in north Charleston at Hugh Leatherman port. Keep our roads safe.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#99	2021 at 9:57	As a resident of Mount Pleasant, the importance of the port goes without saying. That being said, minimizing the impact the port has on the city and surrounding neighborhoods is paramount. If done incorrectly, the new long point exit/interchange could have a serious negative impact on local businesses and property values. Option 2 is the only logical option as truck traffic will only increase with the continually evolving digital economy. PIMW#107			oregards to the Long Point Road/ Wando Port Interchange, Option 2 is the best option. The truck traffic increases every year, and is expected to continue increasing. The port needs a dedicated on/off amp. The other options would just be bandaids and not provide a long term solution.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW#114	Novemb 2021 at	I'm particularly concerned with the options for the Long Point Road interchange. All of them would greatly impact our area roads in/around Tidal Walk and Belle Hall, increase noise, and likely require homes to be removed. Noise levels are already above healthy levels in the Tidal Walk neighborhood, with afternoon noise levels typically above 90dB. Has there been any consideration for a rail option from Wando Port? This would dramatically cut down on truck traffic, which accounts for at least 30-40% of the daytime traffic, as well as noise. It seems this option would also mean a much less aggressive plan to increase lanes, raise bridges, etc. Also, I know it was mentioned on this web page, but I would like to see a much more aggressive public transportation option/plan. I know I would gladly take a bus to work, if I could. In the end, we will never be able to keep up with the increase in population by increasing road size. Just look at every other major city in the U.S. that has 8 lanes. They now just have 8 lanes of clogged traffic! More lanes will likely encourage faster growth, more people to drive, leading to more congestion. Thanks for the opportunity to provide feedback. PIMW#117		021 at 5:05	Was any consideration given to building a dedicated "trucks only" lane on I-526 East from I-26 to Hwy 17 in Mt. Pleasant? Trucks would have their own entry and exit ramps at Long Pt. Rd., both toward and away from the Wando Terminal. Trucks would be required to use only this lane except in police designated emergencies. This would open up the existing lanes to cars and smaller trucks only. More policing of the Wando Bridge to require trucks to use the truck lanes would also be helpful.		Email	11/10/2021

PII	/W#121	2021 at 9:41	Option 2 for truck route is needed badly. I understand the importance of the trucks/ports, and I knew it could get messy on Long Point when I moved to the area, but it can be greatly improved. The congestion, paired with drivers' impatience and lack of awareness, creates a very dangerous, and sometimes stressful, area at the end of Long Point. Nothing can be done to fix the attitudes of some driver but the truck route can be fixed. The intersection at Hidden Blvd. and Long Point, with Shipping Lane adding heavy congestion at certain times during the day, is a complete mess. PIMW#127	2021 at 10:53	I prefer option #2. Thanks you for the comprehensive review package.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW#131	2021 at 12:44	Hello, I think that option #2 for Long Point Rd would be the best alternative for the communities that are along Long Point (I live in Hidden Cove). We all understand that the port will continue to grow and increased truck traffic is a safety concern for neighbors. This alternative appears to be also beneficial for truckers themselves. I would also be interested to see more details on how option #3 would be completed. Thank you.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#132	November 10 2021 at 1:0 pr	I would like to strongly endorse Option Two for the Long Point Road Port Access Road. The other proposed "solutions" would either do nothing to reduce or eliminate the truck traffic hasard — or even could make it worse. Option Two will have the least effect on the residential enclaves nearby and will significantly improve quality of life.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#134	2021 at 1:4	Hello, With the ever increasing truck traffic from the Wando Port, the road noise has become unacceptable for the homes located near I-526 in Mt Pleasant. This problem will only get worse as more and more trucks and cars travel along I-526. There needs to be a sound barrier built along the interstate to reduce road noise coming into nearby homes. This will greatly increase property values, and therefore tax revenue generated by these homes, as well as improve the quality of life near the interstate. Thank you! V/r, Henry Delay	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#138	November 1 2021 at 9: p	0. I think option 2 is a good idea. I have live at my current address 30 years. When 526 was built my husband argued for the port to have its own exit. This improves safety and efficiency. Also a direct way to rail would be of value as we now see on the west coast. I hope you are really considering community input and not just box checking. PIMW#150		21 at 10:53	The PEL has proceeded beyond Step 3 with insufficient public outreach. The process was initiated with less than 90 comments received from a metro population of over 800,000 people (0.001% participation). The PEL process should consider the comments received from the OCT 2021 meeting as the starting point for the level 1 processes. The current alternatives were developed and alternatives discarded without sufficient public input.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Thank you for providing more information about the conservation easement. We will look into this protected area and ensure it is documented in the planning study. If any potential projects are funded from this study, this will be evaluated in more detail during the environmental phase of work for the projects. PIMW#153	2021 at 9:59 am	The alternative to build a replacement Wando Bridge on the south side of the existing bridge was capriciously discarded. The replacement bridge could be constructed with open spans over any grave sites without disturbing them. Memorial parks honoring the cultural and historical significance of graveyards could be constructed in a similar manner to the Memorial Waterfront Park under the Ravenel Bridge Construction on the south side would greatly reduce adverse impact to residential areas as it would eliminate the need to demolish dozens of owner occupied homes in Mount Pleasant and would greatly mitigate noise pollution to remaining homes in Etiwan Point, Marsh Walk and Belle Hall subdivisions. Also, it should be noted that graves were relocated to accommodate the construction of the exiting bridge. Eliminating alternatives due to existence of graves would be hypocrisy on the part of the State.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#155	2021 at 3:59 pm	I live off of Long Point Rd and constantly have to deal with the port traffic coming into and leaving the neighborhood. I'm in favor of Option 2 where there is a more direct path for the port traffic instead of funneling it past neighborhoods and businesses off of Long Point Rd. I see on a regular basis very aggressive driving behaviors on Long Point Rd as people are turning onto and off of it. Depending on the time of day, there could be long lines of trucks resulting in people waiting for a while to make their turn. So when they see a small opportunity, they are likely to go for it and zoom infront of trucks and other cars in a very risky way and causing people to slam on their brakes at times. Option 2 would help alleviate a lot of this concern since the port traffic would circumnavigate all of this. PIMW#157	November 15 2021 at 5:3: pn	I vote for option #2	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIMW#	162 N	2021 at 8:36	I live in Hidden Cove and must carefully leave and enter my subdivsion with great care because of all the truck traffic hazards on Long Point Rd. I often have to take chances around blind spots created by truck traffic, trucks parked in turn lanes, and trucks pushing through stop lights. Its also dangerous for foot traffic. I walk to/from my doctor, dermatologist, breweries, and eateries. Besides traffic dangers, there is also fine dust particles that infiltrates our house, cars and bodies. The only acceptable option for me would be one that minimizes the number of trucks on Longpoint Road. Therefore, option number two is my preference.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#	163 z	November 15, 2021 at 10:34 pm	Option #2 is the safest option for all those traveling in and among the truck congestion at 526 and Longpoint and Longpoint rd. The infrastructure can no longer safely support the volume (and potential volume) without catastrophic consequences. This is a major opportunity to support the port with direct— to and from—accesses.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#168	pm	Option 2 for The Long Point/Wando Welch Interchange is the best option for all parties. Option 2, with the dedicated on/off ramp for trucks onto I526, would decrease the bottleneck of car/truck traffic on Long Point Rd., as well as address the safety hazards and quality of life issues for SPA neighbors along this route. The SCSPA accounts for about 10% of SC's economy, providing 1 in 10 jobs and 1.1 billion in tax revenue and is slated to increase these totals as more/larger container ships arrive with the deepening of the harbor. If Volvo warrants its own interchange, certainly the SPA does, too. Option 2 allows easier access to the Wando Welch Terminal for movement of containers, but also gives the option of using Long Point Road if necessary. I am opposed to Options 1 and 4 as these 2 options would not alleviate the gridlock or give SCSPA the extra option for container movement. PIMW	#177	November 18, 2021 at 3:17 pm	Option 2, clearly. The trucks are a massive safety hazard and most of the drivers have zero regard for the passenger vehicles sharing Long Point Road with them. Hidden Cove subdivision residents, especially, are forced to deal with speeding, carless driving truckers on the way into and out of the neighborhood. Please move forward with Option 2.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIMW#181	November 18, 2021 at 3:36 pm	Long Point Rd Option 2 is the only viable solution that addresses the ever increasing danger of having more and more trucks driving through our neighborhoods. Sometimes we can't even get in or out of Hidden Cove because of the trucks either at a standstill blocking the entrance, or speeding one after the other. It is not safe, especially for our kids and young drivers.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#182	2021 at 3:52	I vote for Option 2. I live and work off Longpoint Road. While I just go from Hidden Cove to Wando Park Boulevard every day, you never know what to expect. It is dangerous at times to try and turn left onto Wando Park in the mornings and feels equally as dangerous coming from lunch and trying to fight to get in the right turn lane with the trucks getting off 526 merging on to Longpoint. There is no way to expand Longpoint Road in the future, although it needs it now at times and repave it with concrete like we did in the past with everyone sharing half of Longpoint Road. I had to go home and meet someone at my house around 10 and there was no problem. Leaving 35 minutes later it was crazy backed up to the port. Please build Option 2 and please do something soon! Thanks	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#186		As a resident in the Hidden Cove neighborhood, I strongly support the Long Point Road/Wando Port Interchange OPTION 2. As an original Charlestonian and long time resident of Hidden Cove, the truck traffic was not much of an issue in the past but it has now come to be not only a major issue but a legitimate concern. The Port is a vital operation for our area so it goes without saying that resolution for the Port and the residents on the Southern stretch of Long Point Road is critical. There is only one blatantly clear resolution which is getting the trucks off Long Point Road. It has reached a point where safety, tempers and traffic levels have reached their breaking point. Any option other than Option 2 is a waste of time and money which would be extremely frustrating to see that happen. Easier access for the trucks with reduced traffic stress on long point would be enjoyed not only by the truck divers/shipping and logistic companies but also by the residents and businesses in the Southern Stretch of Long Point Road. Thank you for the strong consideration and hopeful implementation of Option 2 for this much needed improvement. PiMW#187	2021 at 4:5	It is clear that option 2 provides the least disruption for residents on Longpoint Road south. It will also assist businesses along longpoint road before the spa wando direct access. I would like to see planner ramp elevations for options 2 and 3. I would laso like to see estimated 5 and what current sites / buildings would have to be relocated to complete 2 and 3. Estimated truck noise should be taken into account on elevations of plans. 2 and 3 would give options on widening long point road to 17.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#189	2021 at 8:07 pm	I have lived in Hidden Cove Subdivision for over 21 years, and throughout that time I have witnessed many dangerous situations involving the interaction between trucks going to the port and car traffic on Longpoint Road. It has worsened every year. Just this morning, when on my way to a dental appointment I was almost rear-ended by a tractor-trailer when I stopped for a red light (not a sudden stop). Fortunately, the truck swerved around me (thereby running the red light). It was also fortunate that no one was in the next lane. On the way back from my appointment, truck traffic was backed up in both lanes, which caused weblices travelling in both directions to use the median to get around the truck traffic, creating a dangerous situation. Option 2 is the only alternative that would eliminate these dangerous conditions, and would likely create a more efficient entry to the port for the important truck traffic. PIMW#196	2021 at 1:41	Please consider completing on land projects first-such as connecting across James Island to Riverland Drive . This will alleviate some crowding and many accidents on Folly Road as it will end a left turn across dual lanes . It will also help traffic on Camp Road beside the new middle school as many who do not want to make the left turn across Folly Rd without a light now take the round-about at Riverland and Camp and Polly. Such a short distance and such impact should be done first	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will be used padjects. SCDOT will bring additional design details out for public comments at that time. SCDOT will be used and padjects homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).		11/19/2021
PIMW#197	November 19, 2021 at 5:01 pm	I think option 2 is the best option to keep the nearby neighborhoods safe for both family vehicle and pedestrian traffic. Fortunately, there is the perfect space for a new road, close to the shipping terminal to put a separate 526 access for the truck traffic. Thanks! PIMW#199	2021 at 9:47	Despite expense and hurdles, I think option 2 for the Longpoint Wando terminal is the alternative that will provide lo term benefits. As a Mt P resident working in Goose Creek I am directly impacted by these changes. I have family and friends who live in Hidden Cove, right near the port. It is extremely difficult and dangerous at times to maneuver turns and general driving into the neighborhood. Thank you for this platform to respond. PIMW#200	2021 at 3:05	Thank you for the opportunity to comment on the proposed improvements to the I-526 east corridor. Regarding the Long Point Rd/Wando Terminal (Port) Interchange: I believe Option 2, a dedicated Port access/egress road, is by far the best option for all users of the west end of Long Point Rd, including the truck drivers; the business owners, their employees and their customers; and the local residents). The Port is continuously upgrading their facilities to accommodate more, and larger, ships, which equates to moving more containers and putting more trucks on Long Point Rd. Unfortunately, the infrastructure (road system) is lagging behind, and safety along the west end of Long Point Rd is now a major concern due to the truck congestion. Now is the time to correct this deficiency by building a dedicated road to and from the Port.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT will the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. PIMW#2		ovember 21, 2021 at 4:51 pm	I feel Option 2 is, by far, the most favorable option for relocating the truck traffic coming into and egressing Wando Terminal. The truck traffic has increased to the point of becoming a serious safety issue. Option 2 appears to be the least intrusive option for all concerned. It would also speed up the arrival / departure times of truck traffic therefore increasing productivity for the terminal.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. PIMW#2		2021 at 5:08	After carefully reviewing the various options I am in favor of option 2. There are no easy solutions but it makes the most sense and also would provide more safety for surrounding neighbors and a direct shot for trucks without having to stop for two traffic lights. OPTION 2	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. PIMW#2	No	21 at 9:25	All of the proposals for section 2 that are still under consideration either add 4 lanes on only one side of the existing 526 footprint, or expand the footprint symmetrically by adding 2 lanes to each side. I'm wondering whether expanding the footprint asymmetrically by adding 1 lane to one side and 3 lanes to the other side could reduce the number of residences along this section that the other proposals put at risk of demolition. PIMW#.		lovember 22, 2021 at 10:14 am	I would like to voice my support for option 2. Traffic continues to back up In Front of Hidden Cove. It is difficult to get in and out of our neighborhood when traffic backs up. If traffic increases this will get worse. Option 2 would alleviate a lot of traffic in front of the neighborhoods and businesses.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#2	November	I would vote for Alternate #2 since the container and other truck traffic on Long Point Road is at a very dangerous state especially with trucks lined up on the exits to Long Point Road which sometimes ends 2, up with truck and other traffic backing up onto 1-526. The traffic conditions on Long Point Road are bad enough now creating significant safety issues. An exit off of I-526 which bypasses the exit ramp for Long Point Road and is only used by the trucks going to the container terminals would alleviate a great of this problem. This needs to happen sooner than later especially with the Port expanding and handling larger and larger container ships. This bypass should have taken place probably 5 years ago at least.	funded for development. РІМ			Hill As a resident of Park Circle in North Charleston who frequently shops and recreates in Mount Pleasant, I understand the traffic concerns. However, given the resulting induced demand this will generate, I encourage you to pursue a no-build option with increased funding and support for buses and multimodal options in place of widening the I-526 corridor. For the Longpoint interchange, option 3 could potentially alleviate the congestion and conflicts that occur with the current interchange by allowing trucks to bypass the current exchange and get up to speed before merging with Northbound traffic. Please stop subsidizing single-occupant vehicle traffic by spending billions widening lanes. We both know these additional lanes will only drive more development that further encourage more single-occupant driving. It is a losing recursive downward spiral.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. РІМУ			I believe the most pragmatic approach is a combination of: -investing in "robust express bus service" and park-and-rides for Corridor G, as recommended by the BCDCOG's Regional Transit Framework Plan; -investing in bike/ped linkages to facilitate safe connections to destinations (employment hubs, retail centers and neighborhoods) from the 526 corridor; -incorporating Transit Systems Management and Operations (TSMO) options including managed lanes, enhanced lane markings and traveler information postings, and reserving shoulders for buses-only during rush hour; -and retaining SCDOT's commitment to provide a multi-use path over all river crossings in this project. PIMW#218	November 24, 2021 at 6:11 pm	Every day I risk my life trying to get out of and back into my neighborhood, hidden cove. Trucks use the straight away coming out of the port to ramp up speed, making a left turn into the neighborhood very dangerous. Mersk employees will drive on the wrong side of the road to get into center lane, again dangerous. I support and endorse Option 2.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. PIMW#219	November 26, 2021 at 9:40 am	Dear sir or madame, As a resident in of Turnstone street in the Tidal Walk neighborhood my home and property are sure to be affected by the expansion of I-526. We understand the need for the expansion due to the congestion on the roadway due to population increases and the growth of the Long Point port terminal. We feel very strongly that the SCDOT should select reasonable alternatives that do not result in loss of residences. Valuable community members such as nurses, construction workers, and financial service providers could lose their homes and would likely be unable to remain in Mount Pleasant due to the scarcity and dramatic rise of the cost of housing. We strongly advocate for Option 2-I for section 2 of the expansion of I-526 and for Option 1 for the redesign of the Long Point road interchange of I-526. We appreciate your consideration of our comments and concerns and their incorporation into the planning of the expansion of I-526.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. PIMW#220	2021 at 7:14	Adding lanes to existing roadways does not mitigate long-term traffic issues. Lane additions always take years longer and billions of dollars more than anticipated which only breeds hostility among residents. Making public transportation a legitimate option in this city is a reasonable solution that would likely cost less and cause fewer headaches in the long run. Connecting West Ashley with Mount Pleasant via safe, quick, and affordable public transit would be an effort we would all benefit from!	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. PIMW#222	November 27,	and the Transportation Investment The Post and Courier article, New study shows Charleston businesses' frustrations over yearly hurricane disruptions, (December 9, 2019) develops important considerations for all of us, not just the business community. I write to raise the interacting issues of flooding and transportation investment that calls for greater leadership should you choose. Our economic resilience is conditioned on the volume and intensity of a high-water inundation that lacks any metrics in this evaluation to judge the veracity of our nonexistent flood plans and responses. SC DOT repeats the highway outline adding errors to the regional design that is knowable in this planning. Do Nothing About Flooding It is obvious we have done too little to address the flood risks in our region despite the foreseeable risks. Clearly the do-nothing choice is not our preferred option. Doing nothing will also be the costliest one. I encourage you to take up this question by requesting our county and local flood strategy of our municipal and county officials. Likewise, the developed flood control plans now lacking funding. The economy cannot grow if accommodations are not made to store the excess water. Impact Scenarios Quantifying climate risks under different scenarios is an essential yet challenging part of understanding our vulnerabilities and preparing adaptations for the physical climate risks locally; principally flooding. Physical climate impacts such as sea level rise, itial flooding and increased downpours are locked in for the coming decades awaiting expression. Developing flood risk scenarios addressing future uncertainty in the coming decades are a necessary step for holders of risky assets, including our local municipal entities supporting governmental services through	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#223	November 27, 2021 at 6:41 pm	complicated, but don't forget that the 526 East project is already pretty ambitious, so I hope that doesn't deter the project from considering the idea. Second, when I was at the in-person meeting in October, I noticed a lot of the focus was on the bridges and the sheer number of lanes. That's obviously important and I respect the focus given to that, but we have to make sure the interchanges that just as much attention. The road is only as good as its choke points, especially at rush hour. When they showed the rush hour LOS visuals for 2017, the traffic mostly seemed to emanate from interchanges. As this is a project meant to reduce congestion, it should give a special amount of focus to these very interchanges which often are a source of congestion, yet the only interchange given special focus was the one at Long Point Rd. Building off of that, I don't want to see these interchanges become all complicated and confusing. When I saw the visual for the North Rhett-Virginia interchange, I thought it was a joke because of just how convoluted it was. We have to remember that South Carolina has a lot of bad drivers, and those numbers are reflected in our road statistics compared to the rest of the nation (e.g. higher than average road fatality rate). Putting some focus on simpler roadways will help to reduce confusion at the roadways (especially for people unfamiliar with the area e.g. truck drivers going to the port), make it less a mental burden to navigate an already high-capacity road, and possibly even reduce accidents.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. The existing I-526 corridor will eventually require updating in order to support advanced technologies to manage congestion and allow efficient operations. The current configuration limits SCDOT's ability to effectively manage traffic operations and would limit the facility's use for enhanced transit operations without significant upgrades. A regional interstate congestion management plan was conducted and indicated that a managed lane system will notice that we have proposed 12 ft inside and outside shoulders throughout). A toll lane would require a legislative action in order to allow tolling on an interstate in SC. All of the interchanges on the I-526 corridor were evaluated as part of the planning study. Long Point Road was the only interchange in the EAST segment that was identified as needing major improvements due to operational issues. All the other interchanges on the I-526 corridor were evaluated as part of the plannin	Email	11/29/2021
PIMW#224		The PEL Needs Analysis does not appear to take into consideration any of the dramatic changes expected within transportation industry by 2050. The study does not explicitly address the impacts of game changers such as zero carbon emissions, self-driving vehicles, automated freight transport, hyperloops, and increasing remote work scenarios. The analysis appears to be a straight line extrapolation of the last few years. Furthermore it does it take into consideration the possibility that the Charleston area growth may significantly slow or reverse due to factors such as global warming, economic downturns, and ability to work remotely. The PEL needs to be revised to provide alternative traffic projections based on possible scenarios driven by technological, environmental, economic and workforce commuter changes.	Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. PIMW#22	November 2:	The current 526 East bridges were designed to provide service until at least year 2065. Prior demolition would represent government waste. The current bridges could be widened to three lanes and b, blike/pedestrian lanes added underneath. However, major sources of congestion will remain at the chokepoints of Hwy 17N, Longpoint Road, Clements Ferry Road, Virginia Avenue and 1-26. Doubling the capacity of the existing bridges by replacing them will only further overload the limited number of exit/entrance routes available. SCDOT should give significantly more consideration to building alternate routes rather than relying on a single east/west mega-expressway for a metro population that may soon exceed one million. PIMW#23i	Nove	ember 28, n 1 at 9:30 v	think it's great that the 526 corridor will potentially be expanded. It will hopefully cut down on traffic, allow traffic to flow if there is an accident/lane closure. I live near the Wando bridge section (at the new Waterfront development) and wonder: if the newer bridge is built lower, will it be noisier on the island? Right now, I don't really hear the traffic on the bridge from my home but if the span over the vater is lower, how much louder will it be? I do need to mention that I play tennis at LTP and it is already quite loud when playing tennis on the courts that are closest to the current bridge. (courts 1-4). If he bridge is lowered, it is going to be more difficult to play. We can barely hear each other yell out the scores when playing a game now. PIMW#232		There seems to be a lot of information missing that is important for this decision. What is the age and the state of the current don holt bridge. Should it be updated or rebuilt? Cost is important and there is NO cost information provided. With that said, I do not think the bridge should be lowered. Keep it so that maritime commerce is not impacted. Keep it at current level or higher. I hope that walking and bike lanes are added to the design as well. Why are only north charleston and Mt P areas being considered for improvement? West Ashley has considerable congestion and traffic issues. I-26 also needs to be expanded to deal with the volume of traffic both daily and for emergency evacuations.		Email	11/29/2021
PIMW#233	2021 at 10:1	For the past ten years nearly every road enhancement or improvement has taken place in an effort to improve the quality of life for the residents of the Mount Pleasant and Daniel Island areas at the sacrifice of all other Charleston areas. It is time for SCDOT to face the fact that there are other areas that are growing and expanding in the region that equally deserve the attention and development. The supposed repaving of 17A and USS2 both were no more than slurry coats that were no more than 1/2 inch and both of which are already peeling from the undercoat. It may be true that the wealth resides in the Mount Pleasant area but the majority of the workforce resides on the other side of the Cooper and Ashley Rivers. It is time that you do your due diligence and serve the entire area not just the areas represented by money and political power.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#234	November 29	Thank you so much for considering improvements to the 526 corridor. Your designs have definitely addressed the common trouble spots. I love the replacement design of the Wando Bridge. I assume the existing bridges would be kept in place during construction. I especially like the lower bridge height, 4 lanes, full size emergency lanes on each side, and the separate pedestrian lane. I also like how the Don Holt replacement has similar features of 4 lanes, emergency lanes on each side, and the pedestrian path. Bridges can be a wonderful, iconic design element for any city. I might suggest that instead of the outdated, trestle style bridge we have now, perhaps a more sculptural design could be considered? The Ravenel Bridge is a wonderful example of form and function at it's best. Cable structures can span long distances, as needed to replace the Don Holt, while also being a beautiful asset to our city. Of course, the Don Holt replacement needs an incredible amount of structural redundancy, as the cargo ships pass beneath it. One note on the higher steeper bridges, is that they can slow down the semi truck traffic. The sight lines should also be considered on the bridges, as both the current Don Holt and Wando bridges are so steep at the highest peak, that a driver cannot see what traffic is just ahead on the downhill side of the bridge. More gradual inclines might help with the sight lines to prevent accidents. All bridges should have nice, high guardrails (higher than now). Thank you also for addressing the Long Point interchange! A port should really have it's own dedicated exit. Long Point options 2 and 3 do a wonderful job of separating truck traffic from car traffic. I realize these options are more invasive to the neighboring homes and businesses, but a dedicated exit and truck friendly on-ramp are critical for a successful port and the safety of other drivers. I also like how option 4 removes the current cloverleaf on and off ramps. The existing tight uphill curves make it hard to get up to speed when enter	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Additional details such as proposed grades for bridge approaches, barrier details and aesthetic designs for the major bridges would be part of the future public involvement as the projects are funded and move into the Environmental phase of work. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). PIMW#237	2021 at 9:26	We are paying for the road. We should not be held back by truckers blocking the road going to and from the port. They really do that, I don't use 526 because of them. The truckers are using every available route to get into and out of the port, which clogs the roads going into and out of the ports. If there was a road tax collected coming out of the port which would go to making new roads and fixing the existing one, adding lanes. That might help. For sure the truckers are not from SC for the most part. They pay no road tax to SC 9 of every 10 trucks have out of state tags. I have to give up my right to drive because of the truck traffic while I am paying the taxes that built the road.	funded for development	Email	11/30/2021
PIMW#238	2021 at 9:38	I am concerned about the impact on the environment and believe the most pragmatic approach is a combination of: investing in "robust express bus service" and park-and-rides for Corridor G, as recommended by the BCDCOG's Regional Transit Framework Plan; investing in bike/ped linkages to facilitate safe connections to destinations (employment hubs, retail centers and neighborhoods) from the 526 corridor; incorporating Transit Systems Management and Operations (TSMO) options including managed lanes, enhanced lane markings and traveler information postings, and reserving shoulders for buses-only during rush hour; Please ensure that there is also a commitment to provide a multi-use path over all river crossings in this project.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#239	November 30, 2021 at 10:12 am	Ultimately I do not believe widening the East segment of I-526 is an affordable or viable long-term solution, since it will induce more demand and eventually put us back where we started but \$4B more in debt. However, I do appreciate the addition of multi-use paths on all the bridges; that will be a big benefit for multi-modal connectivity. I tend to support the recommendations outlined by Charleston Moves, who state that the most pragmatic approach is a combination of: (1.) investing in "bioust express bus service" and park-and-rides for Corridor G, as recommended by the BCDCOG's Regional Transit Framework Plan; (2.) investing in bike/pdel linkages to facilitate safe connections to destinations (employment hubs, retail centers and neighborhoods) from the \$26 corridor; (3.) incorporating Transit Systems Management and Operations (TSMO) options including managed lanes, enhanced lane markings and traveler information postings, and reserving shoulders for buses-only during rush hour; and (4.) retaining SCDOT's commitment to provide a multi-use path over all river crossings in this project. Thanks for listening.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#245	2021 at 11:42	There needs to be a significant improvement in the design or phasing of the new interstate to better utilize the existing right of way. Taking additional right of way on either side of the existing 526 ROW corridor, especially in Mt Pleasant, is overly burdensome on the existing homeowners and should be avoided at all costs. There is plenty of land available in the existing ROW for additional lanes of traffic, including a large grassed median. Using the existing median to add lanes would be more effective and less detrimental to our community. Our neighborhood, Grassy Creek, is vehemently opposed to the condemnation of any home, HOA property or street that provides access to our subdivision. We are also strongly opposed to any fly over bridge for port traffic that would be outside the existing ROW. We absolutely do not want port traffic being rerouted so that it merges onto the interstate directly outside of our neighborhood and encroaches into our community. PIMW#249	2021 at 12:05	I live in Hobcaw Creek Plantation and am very concerned with the lack of safe bicycle access/lanes from my neighborhood down along Longpoint to the shopping center. There are bike lanes starting at the shopping center, which can safely get me to the senior center and other areas around town. But it is dangerous riding to the other neighborhoods (Hidden Cove and Oak Park), the apartment complexes along Wando Way and to the shopping centers and Bell Hall neighborhoods. Neighborhoods and The Port should coexist and it would be awesome to have bike lanes on the upper Longpoint road, traffic lights that recognize when a bicycle is waiting for the light to turn, and a bike lane along Wando Way. Thank you.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#253		21 at 1:03 sl	The on-ramp to I-526 to Mt. Pleasant on N. Rhett Ave. should be on the opposite side of N. Rhett Ave than the westbound on-ramp. There are huge issues every day with traffic trying to merge into that hort, single lane to enter I-526 east. Until a fix can be made, this area should be monitored by police as people continuously change lanes illegally and cut off other people who are in the correct lane already. Please consider addressing this issue. Thank you	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#255		ember 30, 21 at 1:45 pm	Dur neighborhood, Grassy Creek, is vehemently opposed to the condemnation of any home, HOA property or street that provides access to our subdivision. We are also strongly opposed to any fly-over pridge for port traffic that would be outside the existing ROW. We absolutely do not want port traffic being rerouted so that it merges onto the interstate directly outside of our neighborhood and increases into our community. There needs to be a significant improvement in the design or phasing of the new interstate project. Taking additional right of way on either side of the existing 526 ROW corridor, especially in Mt Pleasant, so everly burdensome on the existing homeowners and should be avoided at all costs. There is plenty of land available in the existing ROW for additional lanes of traffic, including a large grassed median. Using the existing median to add lanes would be more effective and less detrimental to our community, even if that means phasing the project for a longer construction period. Pif	W#256	November 30, 2021 at 1:45 pm	I live in Grassy Creek, and feel that several of the Long Point road interchanges significantly alter the character of our neighborhood. We recently purchased our home in Grassh Creek largely due to the family friendly nature of the neighborhood. Several of the proposed changes significantly affect the safety of children in our community as routing truck traffic directly at our neighborhood entrance would be dangerous. I am opposed to the condemnation of HOA property or street that provides access to our subdivision, and to any fly-over bridge for port traffic. Rerouting port traffic to merge directly at our community entrance creates a noise burden, a safety burden, and a decrease in property value as it negatively impacts the neighborhood environment. There needs to be a significant improvement in the design or phasing of the new interstate project. Taking additional right of way on either side of the existing 526 ROW corridor, especially in Mt Pleasant, is overly burdensome on the existing homeowners and should be avoided at all costs. There is plenty of land available in the existing ROW for additional lanes of traffic, including a large grassed median. Using the existing median to add lanes would be more effective and less detrimental to our community, even if that means phasing the project for a longer construction period.	will provide SCDOT with the potential scope and cost information they need to pian funding and schedules for future projects on this corridor. PIMW#260	2021 at 2:2	Thank you for the opportunity to provide input on the proposed project. I have provided my thoughts on preferred alternatives below. Long Point Rd / Wando Port Interchange — Option #2 Rather than tying up traffic at an already congested intersection, we strongly support your Option #2 which is to create a dedicated, truck-only interchange further up i-526 entering directly into and out of the port gates. This would allow for dedicated, truck-only traffic direct access to the Port gates without round-abouts, stop lights and regular car traffic experienced at the current Long Point Road intersection. I-526 Lane Widening — Section 3 (At Long Point Road) I support the I-526 "1-Lane widening to westbound exterior and interior" and "1-lane widening to eastbound exterior and interior". Barrier Sound Walls along Section 3 of I-526 Expansion Due to the current and future noise problems coming from the bridge which crosses Hobcaw Creek, I highly recommend the installation of noise barriers/walls. Due to the extremely close proximity to no homes and businesses these sound walls should be installed all along the I-526 corridor in Section 3, to include the Hobcaw Creek bridge. (Mt. Pleasant). I-526 Lane Widening — Section 2 I prefer Option 21 as it appears to have the least amount of impact on the existing businesses and residences along this section of the project. However it seems that the multi-use path connection on the southwest side of the bridges (eastbound I-526) would be preferred given the opportunity for viewshed corridors of the port, Ravenel bridge, and downtown as well as being able to more easily tie-in to the commercial business district on Daniel Island. I-526 Lane Widening — Section 1 I believe the Don Holt will ultimately need to be replaced to allow for the higher clearance access to the port terminal. Maybe there is an option to phase the bridge construction to do a new 4 lane bridge at the higher elevation and then replace the Don Holt with a higher bridge sometime later on when more funding becom	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#261	2021 at 2:3), it appears that the current plan is extremely detailed. I am interested as to what kinds of consideration the leadership of this project has given the population that lives along I-526 that will reduce 0 disruption and displacement. Both my Grassy Creek neighborhood as well as the Tidal Walk subdivision stand to sacrifice much in the plan's implementation. I am unclear as to why, for an example, the center median where the highway passes these communities could not be utilized for additional lanes. At the very minimum, that would reduce the spread of the highway into these neighborhoods.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#263	Novemb 2021 a	at 2:37	s a resident off Longpoint Road O woyld very much like to see the trucks have their own entrance and exit off 526. This is a safety issue as the trucks speed on Longpoint Road past the entrance to our esidential neighborhood and run lights constantly in order to make time. It is only a matter of time with the continually increasing volume through the port that a deadly accident could occur. Also the oise from the traffic is very high and again has only increased due to population growth and port business. Our neighborhood has been in place since before 526 was built and I strongly request that with is extension sound walls are erected to mimize the noise level impacts to residential homes. PIMW#266	2021 at 2:47	As a resident of the Hidden Cove neighborhood on Long Point Road, I believe that Option 2 for the Long Point/Wando Port Interchange is the only viable option to alleviate the congestion between commercial truck traffic coming in and out of the port and residential/business traffic by the rest of the residents and businesses in Mt. Pleasant. The Port has shown time and again that they have no desire to work with the community to address and alleviate traffic concerns, so Option 2 gives them their own dedicated route from IS26 to the Port. PIMW#27	November 3 2021 at 3:: p	For the Longpoint Road/526 interchange, we strongly prefer options 2 and 3. Options 1 & 4 do not address the very dangerous intersection at Longpoint and Wando Park Boulevard. The port truck traffic lgoing both ways) creates a very dangerous situation at this intersection, with trucks consistently speeding and running the red light as they enter and exit the interstate.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIMW#278	2021 at 3:32 pm	Our neighborhood, Grassy Creek, is vehemently opposed to the condemnation of any home, HOA property or street that provides access to our subdivision. We are also strongly opposed to any fly-over bridge for port traffic that would be outside the existing ROW. We absolutely do not want port traffic being rerouted so that it merges onto the interstate directly outside of our neighborhood and encroaches into our community. There needs to be a significant improvement in the design or phasing of the new interstate project. Taking additional right of way on either side of the existing 526 ROW corridor, especially in Mt Pleasant, is overly burdensome on the existing homeowners and should be avoided at all costs. There is plenty of land available in the existing ROW for additional lanes of traffic, including a large grassed median. Using the existing median to add lanes would be more effective and less detrimental to our community, even if that means phasing the project for a longer construction period. PIMW#285		I am in favor of widening 526 by two lanes in each direction. The truck traffic has significantly increased on Long Point road and an option 2 which provides an alternative exit/entrance near the base of the Wando bridge should be strongly considered. This would give trucks direct access to the port and keep the local traffic separate from all the trucks. This could also allow the trucks to move without dealing with stop lights. With the widening of 526 and the thinning of the trees along the highway, a sound barrier wall needs to be part of the solution up to and beyond the Hobcaw bridge to the hwy 17 exit.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#286	2021 at 4:36	Much discussion about 526 overall for years and years - especially extending it to Johns Island. I think the overall track has been woefully neglected as far as road surfaces are involved. Anyone who drives 526 (and pays attention!) will see how the road surface itself is delaminating and falling apart. Any plans to improve intersections and/or extend the roadway should first include steps to repair the presently pitiful condition of the hardtop - especially at the intersections of bridges/under/overpasses and the road surface. I see no justification to extending to Johns Island if we can't maintain what's there already. Disagree? Go ride the road! Thank you. SCDOT will have a defining a schedule of the projects of the designs of the projects of the project	Email	12/1/2021
PIMW#294		I am writing to express my support for OPTION 2 (and only that option) for the Long Point Road and Wando Port Interchange. I have lived with my family in the Hidden Cove neighborhood (entrance across from Shipping Lane on Long Point) for 13 years now. Over that time I've observed the tremendous increase in port traffic along Long Point Road between 526 and the port, to levels that can now be fairly described as unreasonable and dangerous, with significant negative impacts to the hundreds of homes and businesses along that stretch of Long Point Road. Simply entering and exiting the neighborhood is generally a hazardous situation, and left-shand turns in and out of neighborhoods and businesses in the area are particularly dangerous. When port operational failures create a backup along Long Point Road, it's total gridlock for extended periods of time. Even when things are running "normally", trucks regularly park in the center turn lane and I have never observed any traffic enforcement or ticketing of those vehicles. Removing as much port traffic as possible from Long Point Road is the only long term solution to the problem. Residents and business owners should not have to live with the unreasonable impact that ever increasing port traffic has imposed on them, now or in the future. Sincerely	Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and not information they need to plan funding and schedules for future projects on this provider. Additional information and details of potential impacts would be developed in the	Email	12/1/2021
PIMW#295	November 30 2021 at 5:35 pm	Please complete I-526. I am now in my 60's. This has been talked about since I was 14 years old.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. PIMW#297	November 30 2021 at 5:45 pm	I am in favor of option #2 for the Long Point road/ Wando port interchange. Removing the 12,000+ trucks everyday on long point road would make for a safer environment for the residents and small businesses on Long Point Rd. PIMW#301	2021 at 6	30, As residents of the Grassy Creek neighborhood, we are 100% opposed to the condemnation of any home, HOA property or street that provides access to our subdivision. We are also strongly opposed to 5:22 any fly over bridge for port traffic that would be outside of the existing ROW. There should be a significant improvement in the design or phasing of the new interstate project without being overly pm burdensome on the existing homeowners in the path. Please reconsider this project as it currently stands.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#308	2021 at 7:28	I am in support of the No Build plan. We need to move away form expanding roadways only to bring more traffic. If we are looking to the future, we need to plan for public transportation options that would meet transportation need such that they do in larger cities. I would love to see us move away from private vehicles to reduce our carbon footprint. We need think of a future with more options for biking and other methods of transportation that are sustainable. PIMW#309	2021 at 7:28	As a resident of Hidden Cove for over 23 years I have witnessed the huge changes of Longpoint Rd. I really think option 2 would be the best option for all parties involved. Shifting heavy port traffic away from residential neighborhoods is a win win for both the truckers and local residents. I also think adding at least 1 lane to both sides of I-526 Wando bridge and adjoining highways Is an absolute must. The sooner the better. Thank you. PIMW#315	November 30, 2021 at 8:22 pm	Option 2 looks best for all parties concerned	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	12/1/2021
PIMW#316	2021 at 8:30	I'm a current home owner in Grassy Creek and am very concerned about the current proposals. I'm strongly opposed to the creation of flyover bridges or removal of homes/access to our community. I'd like to see expansion into the median rather than out and extending beyond the current footprint. I also would like to see sound barriers included in the planning.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#318.	2021 at 8:32 pm	I am a resident of Grassy Creek neighborhood. I have lived here for 16 years and raised my children here. We are so upset to hear that our neighborhood and community are being threatened by the new interstate project. We strongly stand against the destruction of any homes, properties, or streets which would, in turn, provide areas of access to our subdivision. We do not want any bridges for port traffic that would be outside the existing ROW and rerouted from directly outside of our neighborhood. This would be devastating to our children, properties, and subdivision as a whole. There needs to be more time spent trying to find ways to improve the design and/or phasing of these proposals. The land is there and needs to be used without affecting the current communities and natural resources that are already present. Please help us protect our neighborhood, homes, families, wildlife, and ocean rivers.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#319	November 30, 2021 at 8:35 pm	The only option that will solve all of the issues is option #2 The only way to relieve the truck pressure on LongPoint Road is to redirect that traffic away from the 526/ LongPoint intersection.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#3:		ember 30, 1 21 at 8:35 pm 3	have reviewed the project documents and recommend the following:) Lower the Wando Bridge to 65 feet; the excessive height is not warranted;) Add a dedicated access road for the SPA terminal to accommodate the heavy truck traffic and include a sound barrier wall;) Although it's not included in this project, I strongly support the completion of I-526 to link with the James Island Expressway (30). It should have been completed years ago, and it is now needed more han ever.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#3:		21 at 8:36	all of the options are good. Do something soon. Unfortunately, some people own property too close to 526 but most those folks in Moun Pleasant bought after 526 was already constructed. Buyer leware!!! The I-26 and I-526 interchange is deadly and should be fixed first. The SPA needs to do their part to get the trucks off the roads and get rail constructed. What is Palmetto Rail doing about that? PIMW#326	pm	I'm writing to express my sincere concern for the potentially significant and detrimental impact these options pose to my neighborhood, Grassy Creek. First of all I am extremely opposed to the condemnation of any home/HOA property/street that provides access to our neighborhood. Please reconsider the design to prevent the encroachment on our community. More consideration should be given to the existing ROW for additional lanes of traffic. This may add to the timeline but would be less detrimental. Thank you in advance for your consideration for my strong concerns about potential negative impacts to my neighborhood and surrounding area.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#329	2021 at 9:22	Option 2 is the only option that will alleviate the traffic issues and dangers for my neighborhood. Hidden Cove (Indy neighborhood) is a dream come true for kids to grow up. Kids bike to each others house and it reminds me of the neighborhood I grew up in. The one scary challenge that I dread is my kids learning to drive with all of the big trucks on longpoint. There is no room for error. As a parent and experienced driver I've had close calls with fast trucks changing lanes. I'm terrified for the kids of our neighborhood to have to learn driving with these huge trucks dominating our neighborhood entrance. Option 2 for longpoint and port development would be the only option to provide safe passage for our future drivers.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#332	2021 at 9:44	Please take action on improving the safety of Longpoint Road. As a neighbor of the port, I routinely witness trucks running traffic lights, speeding and erratic driving which places our families at risk. A dedicated entrance with direct port access is the best option (option 2) for all parties resulting in safer roads and less traffic congestion for all. Additionally, we request a sound barrier wall be constructed to diminish noise between 526 and the Hobcaw Creek neighborhood. PIMW#345		Option 2 in these scenarios/plans is by far the best to relieve the traffic, trucks, and potential danger from SPA Wando Terminal trucks disobeying the traffic light at Wando Park and Longpoint Road. Direct access to the SPA Wando Terminal would alleviate the back ups on Longpoint West of 526, that occur on a daily basis as well. Longoint Road was not designed to handle over 100,000 18 wheelers each year. Interaction between businesses, neighborhoods, multiple apartment complexes and truckers West of 526 are an ever increasing issue. Thank you	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#346	2021 at 6:06	Of the choices given, I strongly support the no build option. Adding this much auto and truck capacity will only further incentivize the very behaviors that increase traffic. These are, sprawl and one person per 4000lb vehicle. Aside from longer commute times, these behaviors have serious economic and environmental impacts. The focus should be on alternatives that will remove cars and trucks from the roads. Barges, buses and bicycles are three of these alternatives. There are many more. Investing an equal amount in these alternatives will set us on a path for long term solutions.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIMW#347	2021 at 7:42 am	I think road improvements on Johns Island should be investigated first. 1) pitchfork when arriving from James Island 2) flyover interchange at Main Road/Hwy 17 3) widening existing roads, e.g. Maybank Hwy, River Road, Main Road/Bohicket Road. It won't matter how fast you get to Johns Island if you can't improve conditions ON Johns Island. 4) Re-stripe the existing bridges to make more lanes. There are no emergency lanes on North Bridge or the Cooper River Bridge, with cars immediately adjacent to the barrier wall, why do the bridges to Johns Island need such large emergency lanes. Between Charleston and Mt. Pleasant there are two bridges, between West Ashley and North Charleston, there are two bridges. Those appear to handle a lot of traffic. Why does Charleston to Johns Island require four? It doesn't, and reinforces the premise that the congestion issue is causes by the roads ON Johns Island, not getting to Johns Island. With the challenges facing the area with flooding and the costs of the Charleston sea wall increasing quickly, I think the money could be more well spent in these endeavors. PIMW#349	December 1, 2021 at 8:06 am	Our neighborhoods, Grassy Creek and Belle Hall, are vehemently opposed to the condemnation of any home, HOA property or street that provides access to our subdivision. We are also strongly opposed to any fly-over bridge for port traffic that would be outside the existing ROW. We absolutely do not want port traffic being rerouted so that it merges onto the interstate directly outside of our neighborhood and encroaches into our community. There needs to be a significant improvement in the design or phasing of the new interstate project. Taking additional right of way on either side of the existing 526 ROW corridor, especially in Mt Pleasant, is overly burdensome on the existing homeowners and should be avoided at all costs. There is plenty of land available in the existing ROW for additional lanes of traffic, including a large grassed median. Using the existing median to add lanes would be more effective and less detrimental to our community, even if that means phasing the project for a longer construction period. PIMW#353		We desperately need a dedicated truck route directly to the Port to keep the trucks off of Long Point Road. It should have been created originally, but now we have an opportunity to rectify this problem. Long Point Road is about neighborhoods, families, and cars full of children and older drivers, and daily it is a complicated and even dangerous proposition just to get in and out of our neighborhoods while fighting the trucks filling both lanes, speeding, running red lights, etc. This has been well documented and discussed with the port, and the port has made efforts to deal with their drivers, but this has continued to be a problem daily and it will be an issue until there is another route for the trucks. This is the #1 issue for Long Point Road and the port; we are lucky there hasn't been a major wreck with los of life as of yet. Please make this a part of the 526 renovation/expansion without fail. There seems to be an opportunity to run a dedicated lane immediately off the bridge to the back of the port without much of an issue for businesses and homes. But apparently there are 2 or 3 workable options. Also, when 526 is renovated/widened, please include sound barrier walls on both sides of the highway. These neighborhoods which are immediately next to the highway, like Hobcaw Creek Plantation and Grassy Creek, are exposed and need the protection.	Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526) overcuntry/Corridor com) or calling/festing our project hotling (843-258-1135). PIMW#363	December 1, 2021 at 11:21 am	We strongly support Long Point Road/Wando Port Interchange OPTION 2! This would eliminate the heavy truck traffic along Long Point Road where several neighborhoods exist. Option 1 seems to be what we currently have. Option 3 would hurt the entrance to our neighborhood, Hidden Cove. Option 4 looks like a total mess.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The height of the proposed bridges would be established with coordination with the US Coast Guard which includes a navigational study on the channel. If there are users on the waterway with a need for a higher vertical clearance then that will be taken into consideration during the navigational study. The proposed height of 65' is the minimum height proposed, but the actual proposed height that the bridge design is based on will be determined by US Coast Guard once we start design on the actual project in the future. Part of the feedback from the public was to get feedback from those who regularly use the waterway. Additional feedback will be secured in the future from marinas to ascertain a more holistic picture of the actual uses during the navigational study. Please let us know if you have any further questions or concerns by sending us an email (info@5256LowcountryCorridor.com) or calling/texting our project holline (843-25	Email	12/1/2021

PIMW#365	2021 at 11:39	My comment is focused specifically on the Wando Port truck traffic. With the deepening of the port and more focus on shipping in Charleston, the traffic on Long Point will only get more congested. The mix of trucking, residential, and small business is at a tipping point and dangerous. Regarding the Long Point Interchange options, I would prefer to see Option #2 or #3 with the truck traffic rerouted starting close to the Wando Port gate going directly onto 526 and relieving the pressure on Long Point Rd.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. PIMW#367	2021 at 11:45	Construct sound barriers at sections adjoining residential areas. Construct these FIRST to mitigate construction noise. Eliminate "pinch point" on Highway 17 North at the Bowman Road overpass. Maintain three northbound lanes through this area. Provide a way for trucks to get up to full speed before merging onto the highway. Onramp loops slow traffic down and a long merging lane is needed to keep traffic moving. PIMW#370	2021 at 12:05	Since I live in the Hobcaw Creek Plantation subdivision, I am most interested in the section with SPA and Long Point Road. By constructing a direct truck connection from near the SPA to IS26, traffic volumes would decrease at the intersection of Wando Blvd. and Long Point Road. Every day when I wait for a turn light, one or more trucks will drive through the intersection on a red light. It is not unusua to see trucks backed up onto the freeway. This danger would be eliminated with option 2; a direct truck only link to IS26. Also, this is better for the trucks since they can move easily onto IS26 without passing through the neighborhoods, traffic lights, or making a sharp turn to get onto I S26. PIMW#374	2021 at 12:37	 We must have a dedicated port access road to and from 526 for trucks, to get them off of Long Point Road There must be sound barrier walls from the Wando bridge to Hwy 17 to protect the neighborhoods along 526. 	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. РΙМΊ	V#379		I live in the Tidal Walk subdivision which will likely be in the impacted area of any Long Point Road/i526 interchange upgrades. Having viewed each of the options presented, I simply want to make certain that sound barriers along 1526 are included in the construction planning stages. As more property is slated for encroachment of these widening and expansive projects, those of us that border and remain near this busy interstate will definitely need sound barriers to alleviate some of the growing noise. Please make this a priority going forward. Thanks	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PI	√W#380	December 1, 2021 at 5:17 pm	We just recently moved from another part of Mt. Pleasant to the Hidden Cove subdivision and have found out that there is an almost constant stream of large tractor trailers and other port support personnel in cars coming and going to the port on Long Point Rd. It is often very congested making it difficult to pull out of or into the subdivision and when you actually get on Long Point Rd, there are long waits while waiting for the large trucks that occupy both lanes on the road. It is nearly impossible to maneuver around them when trying to drive to my son's elementary school or to 526. To say that the traffic on Long Point Rd near 526 is dangerous would be a gross understatement. In my relatively short time in our new house, I have seen three close calls and was cut off by a tractor trailer who pulled into me so he could turn onto 526. Someone is going to be killed with all this truck traffic. It is not if, it is when. Please make the smart and only safe decision and choose option #2. Furthermore, there needs to be a continuation of the sidewalk under 526 to the shopping center so that children and adults can walk or ride their bikes. Right now, I wouldn't even attempt to do so. Thank you for reading this and helping to protect our families!	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIM3	10/26/2021	Trucks are a major reason for the need. Is the port contributing to the cost? Who determines market value if your house is taken? How much time are you given to move? Option 1 for Long Point Road exit is the only one for Mount Pleasant residents. All other only benefit the port. Wando Bridge should be lowered Alternate routes to North Mount Pleasant need to be addressed. Long Point and Hwy 17 cannot meet the need. Don Holt does not need to be raised Take into consideration the development of North Mount Pleasant and Awendaw. This is temporary fix. PIM5	10/26/2021	Option 2 interchange to get truck traffic to I-526 is certainly preferable. Does this removal of truck traffic from I-526/Long Point Road interchange help the traffic enough on I-526 to Hwy 17 to eliminate adding a lane and would this eliminate the need for a sound wall along Chimney Bluff Road? A sound wall would greatly diminish the current 50' barrier (natural) that our neighborhood (Hobcaw Bluff Plantation) is deeded. It will greatly diminish our property values. If necessary Long Point option 3A is preferable so as not to use natural buffer on Chimney Bluff. РІМ7	10/26/2021	Looking at the different plans, Options 2-I and 2-J appeared to have the least impact on the Mt. Pleasant neighborhoods on Daniel Island's, including the tennis facility. These 2 also utilize the current footprint of the existing Wando Bridge. However, the drastic lowering of the Wando does not consider future development. Perhaps the lower level could be between the existing and proposed heights. As far the entrance and exit ramps at Long Point, option #3 seems to be a good choice & alleviates congestion with the port traffic. The changes to the Don Holt appear necessary and a more time effective solution that addresses traffic and access to the ports. It also appears to have less impact on area residential communities.	Thank you for responding during the I-526 Lowcountry Corridor EAST (I-526 LCC EAST) Planning and Environmental Linkages (PEL) Study comment period open from October 11, 2021 to December 1, 2021. We greatly appreciate your interest in this study. As you know, the South Carolina Department of Transportation (SCDOT) is conducting a PEL Study to identify transportation issues and environmental concerns, from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The purpose of the study is to better define the needs along this corridor and to identify alternatives that would improve travel time reliability and reduce congestion along the corridor. This PEL study is intended to streamline the implementation of recommended transportation improvements for the I-526 LCC EAST by facilitating early consideration of environmental constraints and public feedback. The results of the PEL study identifies possible projects and estimated costs for consideration as part of SCDOT's future statewide transportation plans. As funding becomes available, projects would advance to the environmental phase under guidance of the National Environmental Policy Act (NEPA). During that process, the range of alternatives would be refined and narrowed down to a preferred alternative based on additional studies, design, and public input. Your interest in the I-526 LCC EAST study is valued, and SCDOT assures you that all suggestions, objections, and concerns are carefully considered. Your comments have been made part of the official record. Throughout the public comment period, we received 558 comments. As a result, we have compiled a list of Frequently Asked Questions. We encourage you to review the attached document and share these with your friends, neighbors, and colleagues. If you should have any further questions, please contact me directly at info@526LowcountryCorridor.com, call or text the project hotiline (843.258.1135), or visit our Community Office (5627 Rivers Avenue, North Charleston – Gas Lite Square; CART	Written	3/21/2022
PIM8	10/26/2021	We are very concerned about the amount of noise that has INCREASED in the last 2 years - also the soot and dust/debris from the road. The environmental impact of this and our quality of life is and will be affected for the worst. PIM11	10/26/2021	I do not understand how any option that destroys 3 neighborhoods can be considered. I recognize that traffic is forecast to get worse, but the majority of the options for widening near Long Point ruins Etiwan, Tidal Walk, and Grassy Creek neighborhoods through condemned houses, increased noise, and reduced property values. I strongly urge you to go back to the drawing board and re-evaluate moving the lanes south where the impact is to more commercial properties. Any option that ruins our neighborhoods will be fought against by the entirety of Mount Pleasant. PI	M12		I know the planning (and starting) of 526 is a long way off, so please please please get someone out to re-paint the lines for lanes, shoulder, and exits with white (yellow) reflective paint. It is very dangerous at night, especially if it is raining to see my exit, merge from I-526 Eastbound to Long Point Road	The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year.	Email	3/17/2022
				We will submit you maintenance request concerning the lane marking to our maintenance unit. Feel free to contact 855-Go-SCDOT in the future whenever you have a maintenance concern or question for existing SCDOT roadways.

PIM13	10/26/2021	I am supportive of Option #2 for the Port Access road. There is a very serious safety problem mixing trucks from the Port with vehicles going to and from neighborhoods on Long Point Road. Removing the trucks from most of Long Point Road and routing them on a new road straight to HW 526 makes sense and will improve safety on Long Point Road dramatically. It is currently a very dangerous situation!!	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. PIM14	10/26/2021	While I understand the need for 526 widening, I believe the option(s) that use the median and therefore don't require as much easement use should be selected (+ 2F). My home currently backs up to 526 and the noise is horrible; preventing me usage of my backyard. A sound wall should be erected prior to the widening. I imagine construction noise will be very impactful. Also, what are you doing to my property value? Who will compensate me for that? It's bad enough now and I can't imagine how much worse it will be. I think SCDOT should buy out the houses on Turnstone & Red Knot Street as part of the cost of construction. The houses are only 5-6 years old and someone needs to accept the responsibility for allowing the Tidal Walk subdivision to be constructed in its current configuration.		Email	3/17/2022

PIM15	10/26/2021	A dedicated 'Truck Lane Only' to exit 526 from Eastbound to Long Point that overpasses all other roads to the terminal entrance. Similarly, trucks leaving terminal have dedicated roadway that overpasses residential streets to reach 526 Westbound. Trucks leaving terminal going east to 17 across Revenel Bridge remain the same. (included graphic)	Requested no response	None required	
PIM16	10/26/2021	I would be interested in Alternative #2. It would keep the existing Don Holt bridge and would require less relocations.	Requested no response	None required	
PIM17	10/26/2021	I am totally in favor of Option Two proposal for direct access for trucks to the SPA Wando Terminal. The 1 1/2 mile stretch of Long Point Road from 526 to the Wando Terminal was not built, nor equipped to handle 100,000+ 18 wheelers per year	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. PIM18	10/26/2021	Re: Long Point Road/526 interchange - I'm certain you are aware that the stop lights entering and just prior to existing LP Rd to 526 are a main location for truck and car traffic 'back up" - To widen 526 w/out creating a bypass route for the trucks will be disastrous - increasing the # of trucks moving (and cars) up & down 526 w/out improving the flow on & off 526 will create MORE congestion on Long Point Road. Options 2 & 3 seem to make the most sense (to a 'Layperson") Re: improving flow from 526 to the terminal which will facilitate flow on Long Point Road for cars, emergency vehicles, etc.	Requested no response	None required

PI	M19	10/26/2021	I live off Long Point Road and have been in an accident with a truck. (They ran into the back of me.) We desperately need a separate interchange for trucks - with <u>Option 2</u> - keeping cars and trucks from being together. There also needs to be a way to manage truck traffic on 526 - perhaps their own lane that they actually have to use.	Thank you for responding during the I-526 Lowcountry Corridor EAST (I-526 LCC EAST) Planning and Environmental Linkages (PEL) Study comment period open from October 11, 2021 to December 1, 2021. We greatly appreciate your interest in this study. As you know, the South Carolina Department of Transportation (SCDOT) is conducting a PEL Study to identify transportation issues and environmental concerns, from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The purpose of the study is to better define the needs along this corridor and to identify alternatives that would improve travel time reliability and reduce congestion along the corridor. This PEL study is intended to streamline the implementation of recommended transportation improvements for the I-526 LCC EAST by facilitating early consideration of environmental constraints and public feedback. The results of the PEL study identifies possible projects and estimated costs for consideration as part of SCDOT's future statewide transportation plans. As funding becomes available, projects would advance to the environmental phase under guidance of the National Environmental Policy Act (NEPA). During that process, the range of alternatives would be refined and narrowed down to a preferred alternative based on additional studies, design, and public input. Your interest in the I-526 LCC EAST study is valued, and SCDOT assures you that all suggestions, objections, and concerns are carefully considered. Your comments have been made part of the official record. Throughout the public comment period, we received 558 comments. As a result, we have compiled a list of Frequently Asked Questions. We encourage you to review the attached document and share these with your friends, neighbors, and colleagues. If you should have any further questions, please contact me directly at info@526LowcountryCorridor.com, call or text the project hotiline (843.258.1135), or visit our Community Office (5627 Rivers Avenue, North Charleston – Gas Lite Square; CART	Written	3/21/2022
PI	M20	10/26/2021	Option 2. Best option for sustained current and future growth of the port. Second - Option 3. Options 1 & 4 are not worth the investment as it does not remove the traffic off Long Point Road.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. PIM2:	. 10/26/2021	* Sound barriers have to be included. Can't hold a conversation in my yard as it is. * There really isn't a problem with traffic. I am there everyday 7 & 4 not that big a deal. * The rational for not building a parallel road out by 41 to Grouse Cut is not sound. Most of Mt. Pleasant would be able to access this. No one could provide stats to prove otherwise. * Bottom line the only real problem is when there is a wreck or port shuts down, and that happens everywhere	The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year.	Email	10/17/2022
			As SCDOT updates infrastructure, we must take into consideration all users of the roadways and their needs including the Port facilities. In addition, we must consider other forms of transportation such as navigational users of the waterway in determining the heights of the new or improved bridge structures over those navigational waterways such as the Cooper and Wando Rivers.

PIM2S	10/26/2021	* I agree the Don Holt is a bottleneck & needs modification/replacement. * Wando w/ 4 lanes is a problem; with 6 lanes, not so much. * Expanding 526 from Wando Bridge to 17 will destroy several neighborhoods & negatively impact others * Have you looked at stacked decks? It works in Europe and increased construction costs off-set by not having to buy-ou whole neighborhoods. * Based on what I see here currently, I'm likely going to have to move. * A wall to block noise would be required.	Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. PIM25	10/26/2021	Obviously we must widen I-526. I have the following two concerns: 1. The construction phase must not cause current existing traffic flow to be worse than it is now. That must be addressed. 2. I recognize the important roll large trucks play in supplying our everyday needs and our economy. But some restrictions must be placed on them for safety and for of other traffic concerns. Perhaps some type of lane use restrictions??	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. PIMS	30 10/26/	6/2021 p	Vando Port/Long Point interchange - Option 2 would significantly decrease traffic in front of neighborhoods and risk to edestrians. Suggest adding an 8th alternative - add 4 Iane highway off 526 directly onto Terminal Lane.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	3/17/2022

PIM	10/26/	* tl	Please take a hard look @ noise issues. It's already terrible in the LP & 526 area from the truck traffic. Walls are needed, ven if this project doesn't happen. The flyover in Option 2 would increase not only for neighboring properties, but create an unbelievable eye sore for hose close to the development area, but not close enough to be part of a buy out. The Port really should take a look at a dedicated truck on/off road that stretches to the r/w "old" entrance to the Port nd leave LP intersection as is. Must remove truck traffic eastbound and more than 1/2 westbound.	Requested no response	None required

PIM35	10/26/2021	As someone who lives in Hobcaw Creek Plantation of Long Point, we would very much like Option (Interchange) 2 where all trucks exit the Port directly to I-526. Any of the other options create problems for the neighborhoods off Long Point Rd. So I would scratch options 1, 3 & 4. Also, I would not like truck traffic to cross into Shipping Lane where Hidden Cove residents exit their neighborhood. Also, we would like to lodge a complaint about the proposed widening of Hobcaw Creek's entrance. We see very little benefit to the traffic flow, and it messes with our entrance for very little gain. (A few seconds at most.) Our neighbors on Chimney Bluff would also be extremely upset with any disturbing of their 50' buffer to I-526. I'm sure there is another option!	Thank you for responding during the I-526 Lowcountry Corridor EAST (I-526 LCC EAST) Planning and Environmental Linkages (PEL) Study comment period open from October 11, 2021 to December 1, 2021. We greatly appreciate your interest in this study. As you know, the South Carolina Department of Transportation (SCDOT) is conducting a PEL Study to identify transportation issues and environmental concerns, from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The purpose of the study is to better define the needs along this corridor and to identify alternatives that would improve travel time reliability and reduce congestion along the corridor. This PEL study is intended to streamline the implementation of recommended transportation improvements for the I-526 LCC EAST by facilitating early consideration of environmental constraints and public feedback. The results of the PEL study identifies possible projects and estimated costs for consideration as part of SCDOT's future statewide transportation plans. As funding becomes available, projects would advance to the environmental phase under guidance of the National Environmental Policy Act (NEPA). During that process, the range of alternatives would be refined and narrowed down to a preferred alternative based on additional studies, design, and public input. Your interest in the I-526 LCC EAST study is valued, and SCDOT assures you that all suggestions, objections, and concerns are carefully considered. Your comments have been made part of the official record. Throughout the public comment period, we received 558 comments. As a result, we have compiled a list of Frequently Asked Questions. We encourage you to review the attached document and share these with your friends, neighbors, and colleagues. If you should have any further questions, please contact me directly at info@526LowcountryCorridor.com, call or text the project hottline (843.258.1135), or visit our Community Office (5627 Rivers Avenue, North Charleston – Gas Lite Square; CAR	Written	3/21/2022

PIM37	10/26/2021	I've been told that alternative routes have been studies and do not have the impact that doubling 526 achieves. However, it doesn't make sense that the increase in traffic should be concentrated on one artery. Trucks need a dedicated access to the Wando Terminal to the Leatherman Terminal. Residential growth is on the north side of Clements Ferry and Hwy 17. A northern 526 caliber road is needed to move this traffic to I-26 rather than have this growth backtrack to 526. Where the growth is occurring is where a road needs to be built.		Email	3/17/2022
PIM38	10/26/2021	While all the studies are going on, can we look @ ways to â noise? Hate to wait 2+ more years. Suggestions: â Speed limit to 55 through the area of 526 B+W Daniel Island & the 555 @ 17 South. Since we were allowed to build neighborhoods in this area, why are they, in <5 years, thinking of moving homes? My understanding is that this part of 526 has been an issue for quite a while. Can truck traffic be rerouted to clean up the main issue @ Long Point?	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. РІМ39		I am extremely concerned with the impact to homes (mine included) & businesses along the widening. There must be another option versus only widening. A combination of mass transit, bus lanes, bike/pedestrian crossing must be considered. We will be in the same situation with continued growth in 20+ years after completion. I am extremely concerned with the noise impact as well. Widening this interstate cannot be the only viable option especially with a \$4 billion dollar price tag.	The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year. The draft purpose and need for transportation improvements along this corridor is to reduce congestion and improve travel time reliability along I-526 from Virginia Avenue in North Charleston to U.S. 17 in Mount Pleasant as well as address design deficiencies and mobility challenges in the corridor. The study does include multimodal supporting goals to enhance mobility for people and goods through the corridor, including modes other than single occupancy vehicles, such as carpool, mass transit, walk, bike or truck. While a goal is not a need that will substantially reduce congestion, it does provide guidance for alternatives development and evaluation throughout the PEL process. It is important to recognize that the existing infrastructure will not safely support incorporation of alternative congestion management solutions in its existing condition.	Email	3/17/2022

PIM	140	10/26/2021	After reviewing the plans in-depth, I am disappointed in the response by SCDOT. Specifically, this is not a math equation of how to build a better road. Our neighborhood would essentially be destroyed & relocated if some of these plans move forward. On the left side of the highway, the relocations would include businesses & apartment developers rather than primary residences. It is completely unconscionable that the State would consider these plans. We are not afraid to pursue any and all means necessary to prevent our neighborhoods & community from being destroyed.	The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year.	Email	3/17/2022
				When properties are purchased for Rights of Way, an appraisal is performed by a licensed appraiser in order to determine the current value of your property just before the offer is made to purchase. If you disagree with the appraisal prepared by the appraiser hired by SCDOT, you can also have your own appraisal prepared for comparison. The first offer is always based on appraised property value. For more information about the right of way process, please check out our ROW video here: https://www.youtube.com/watch?v=ISDHJxjUqSw

PIM42		It is unconscionable that our neighborhood would have homes removed and the highway encroach into the neighborhood. It would disrupt the entire look of the neighborhood, would impact the health and quality of life. Our entire neighborhood was just built in 2016-2018. Why was out neighborhood even allowed to be built if this was even a thought? Our property values of remaining homes will also be greatly impacted.	The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. PIM43	10/26/2021	I am a primary residence owner in Etiwan Points, which will be significantly adversely impacted by most if not all of the design concepts. We are very concerned about our safety during the construction process and our home value if our residence is retained. The relative value of our home has already been negatively impacted and well remain so until construction is complete. Construction projects similar to this proposal have notoriously taken significant amounts of time. We will proactively and continually contact our public officials regarding the negative repercussions of these plans to our community.	Thank you for responding during the I-526 Lowcountry Corridor EAST (I-526 LCC EAST) Planning and Environmental Linkages (PEL) Study comment period open from October 11, 2021 to December 1, 2021. We greatly appreciate your interest in this study. As you know, the South Carolina Department of Transportation (SCDOT) is conducting a PEL Study to Identify transportation issues and environmental concerns, from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The purpose of the study is to better define the needs along this corridor and to identify alternatives that would improve travel time reliability and reduce congestion along the corridor. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development.		
	PIM44		been increased dramatically. I now have trash that comes into my yard from the Interstate. I've had friends call & text that they can see me playing with my dog in the yard or standing in my kitchen as they drive on 526. Our valuables such as boats & yard equipment are now visible to those looking to steal & vandalize. This is a major concern & why has the DOT not addresses this? When will a retaining privacy wall become a conc4rn and be addressed?	The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year.	Email	3/17/2022
				Safety is our number one priority, and keeping the clear zone / interstate right of way clear of trees is necessary in order to reduce the number of fatal and serious injury crashes on this high speed roadway. Clearing of vegetation is also important to ensuring proper drainage in storm events. As we develop projects on this corridor, we will evaluate the noise and dust impacts and develop mitigation strategies for those impacts, such as noise barriers and dust screens. If you have concerns regarding trash or drainage issues on any SCDOT roadway, please contact our customer call center to report these issues which may require a maintenance action at 855-Go-SCDOT.		
				Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). As funding becomes available, projects would advance to the environmental phase under guidance of the National Environmental Policy Act (NEPA). During that process, the range of alternatives would be refined and narrowed down to a preferred alternative based on additional studies, design, and public input. Your interest in the I-526 LCC EAST study is valued, and SCDOT assures you that all suggestions, objections, and concerns are carefully considered. Your comments have been made part of the official record. Throughout the public comment period, we received 558 comments. As a result, we have compiled a list of Frequently Asked Questions. We encourage you to review the attached document and share these with your friends, neighbors, and colleagues. If you should have any further questions, please contact me directly at info@526LowcountryCorridor.com, call or text the project hotline (843.258.1135), or visit our Community Office (5627 Rivers Avenue, North Charleston – Gas Lite Square; CART	Written	3/21/2022

PIM48	10/26/2021	Please consider an alternative on I-526 expansion for the area off Wando Park Blvd & Etiwan Point Community. Wando Park Blvd is our only entrance & exit for the entire community. Each of the alternatives has this same problem. An alternate entrance/exit would have to be provided & all possible would involve going over or under I-526.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The Long Point Road / Wando Port Interchange project has been recently funded to become the first project to be developed out of the I-526 East Study. We will have additional public information meetings to show more details on the reasonable improvement alternatives later this year. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). PIM50	10/26/2021	* Glad to see there are some considerations for self-driving cars in the future. * DO NOT recommend using shoulders during high traffic hours - for trucks and rescue vehicles are most called out during these times and need passage. * To get people UNMARRIED to their cars - build in bike lanes, walk trails, on all options - health and wellness depend on the ability to user alternatives SAFELY. * Lastly, build or leave room for a train project - study 'the MAX" in Portland, OR MARTA in ATL trains help so many ways and would relieve downtown roadways. E#2		10/14/2021	Good morning, Wy husband and I are homeowners on Red Knot Lane in the Tidal Walk neighborhood of Mount Pleasant. Unfortunately we will not be able to attend the meeting on the 26th which is why I am reaching out now. My questions: L. Is there still a likelihood that no changes will be made, or is this project definitely moving forward with one of the proposed options? 2. How likely is it that the Tidal Walk neighborhood will be substantially impacted? (i.e have to relocate) 3. What is the timeframe we are looking at for when homeowners will be notified if relocation is necessary? 4. Is the team taking into consideration the current housing market and the low number of comparable houses available on the market? 5. Is there currently a proposed option (2E, 2F, 2H, 2I, 2I) that seems to be the most favorable when taking environmental and community impacts into consideration? My husband and I are very concerned by this change and want to be prepared/know timelines so we can make the best decision for our family. Thank you for your time and consideration. It is greatly appreciated.	Good Afternoon — The information being presented for I-526 LCC EAST corridor is a planning study. The study is really an effort to identify the traffic problems on the corridor and identify potential solutions that might actually solve the traffic problems. These are not funded projects yet, and do not have schedules for more detailed designs. The information that will be published in this planning study would give SCDOT leadership the information they need to determine when potential future projects might be funded. I am glad to set up a time to meet with your family to discuss the study and the potential likely timelines going forward. Most of your questions below are things that would not be studied in more detail until the next phase of work (the Environmental Phase) which would not be initiated until funded projects on this corridor are committed to by SCDOT. It may be easier for us to talk on the phone so I can explain the process. Ican be reached at 803-521-6751 (cell number) if you want to discuss in more detail. Or if you want to provide your availability, I can set up a time to meet virtually and walk you through the information since you will not be able to attend the in person meetings. I am on vacation Oct 15-20th but can schedule something on other dates in October or November. Let me know your preference. Thank you for reaching out.	Email	10/14/2021
E#5		10/24/2021	Both of these meetings begin on a weekday at 5pm. Precisely when the majority of interested parties will be stuck on I-526 trying to get home. If you are seriously nterested in encouraging public participation in person you would hold at least one of the meetings on a Saturday. Some parties would still be unable to attend for work-related or religious observation reasons but it would allow those of us who work and travel the route each a day, a chance to attend in person.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. We appreciate suggestions and input on the best time for meetings. We will take this in consideration for planning future meetings. All of our meeting materials are available online in the virtual meeting as well as in our Project Community office located at 5627 Rivers Avenue. If you have any questions then please give me a call at 803-737-1346 or I can set up a time to meet with you virtually to discuss. Or you can come by the community office and view the materials and talk with our project liaisons. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). E#	2	10/25/2021	To whom it may concern, It is imperative that Option 2 or Option 3 be utilized for the Long Point Road/Wando Terminal interchange. A dedicated truck exit/lane directly to the port is the best option for all parties. Trucks would more easily & quickly gain access to/from the port, but most importantly the safety of residents would drastically improve. Neighborhoods and businesses along Long Point Road suffer tremendously from the truck traffic, speeding and noise. Separately, it is overdue for a sound barrier to be built along 526 for the Mount Pleasant residents. The noise is made worse by the water, but it is unfair for the residents to suffer for the poor planning of the original project, and not to protect their property values or way of life. It is my sincere hope that both a separate truck exit and a sound barrier along 526 East in Mt. Pleasant be included in the project. Thank you,	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. We will be studying noise abatement along the corridor during the next phase of the project development, during the environmental phase of work for the project. In future public meetings we will present this information for public comment. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). E##	.4	10/25/2021	Hi Joy, Can we focus on removing the dependency of citizens on automobiles instead? Are there any studies within SCDOT on the traffic result that non-automobile infrastructure would ease congestion? Rail, busses with their own right of way, bicycles, etc. This kind of proposed automobile infrastructure is a never ending money pit that only ends us back in the same situation we started with. Widening the highway may alleviate traffic short term but studies show that it doesn't take long for it to get back to where it is today. Additionally, the only thing keeping crash statistics and vehicle deaths from going higher is the slower speeds that the congestion creates. Trying to increase speeds is equivalent to increasing vehicle fatality likelihood. Vehicle fatalities went up when COVID-19 hit because all the sudden those congested roads now allowed for speeding. Infrastructure on a fare system that can at least partially pay for itself rather than relying 100% on taxes to keep pouring money into infrastructure that can only be used by those that own cars. The area's infrastructure is already 99% focused towards cars. If you're not in a car, you feel like a second class citizen. Let's focus on getting people out of cars. Bicycle infrastructure that would allow people to cross and not take up a parking space where they are going. Any type of rail system Busses with their own right of way If we're trying to alleviate congestion, why not focus on reducing the number of cars and car dependency of the area, especially on that highway? Reducing the need for cars is much more friendly to taxpayers and the state budget rather than creating infrastructure for more cars. Besides downtown Charleston, the area is a car infested environment and widening the highway will only exasperate the infestation. Downs—Thomson paradox states that the equilibrium speed of car traffic on a road network is determined by the average door-to-door speed of equivalent journeys taken by other forms of transport. It is a paradox in that imp	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Regional traffic models, as well as rush-hour observations, indicate that because of congestion, commute times have increased. The primary result of adding more lanes would be reduced travel times for those currently using I-526. Those currently using other, longer routes for their commutes, because of the congestion and frequency of crashes on I-526, may choose to use I-526 in the future. This hidden or built up traffic demand consists of trips that are not new, but will be attracted to I-526 with added capacity. This is accounted for in the project's future traffic forecasts. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).	Email	10/25/2021
E#	1.5	10/25/2021	SC Ports Authority SHOULD pay a huge portion of the project. It's true: a truck has the same amount of road damage as 9600 cars. The Wando Welch facility should not allow cargo ships/trucks UNTIL they began using the Hugh Leatherman terminal. What a huge waste of money.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts, including noise and noise mitigation, would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. When project are funded, then information regarding the funding sources will be provided for the public's input. E#18	10/26/2021	I 100% agree highway 526 needs to be expanded and both bridges need to be replaced. My biggest concern is the Long Point Rd. / Wando Terminal Interchange, it's hard to determine which alternative will reduce the backup caused by trucks exiting today. I've spent a lot of time at that exit when 526 has only 1 lane available because all the trucks are backed up onto 526 trying to exit. It appears to me like option 2 for that interchange may help the most, but can a study be done to see at peak truck exit times to see how each option performs?	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. You have been added to our mailing list for project updates. The information being presented in this meeting is part of a planning study and the recommended projects are not yet funded. Once the projects are funded, then additional traffic analysis and design will be performed to compare the alternatives in more detail. That information will be presented in future project information meetings. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). E#21	10/26/2021	Thank you. We live in Daniel Island Park on the water. Over the past 5 years we have experienced an increase in the road noise. Sometimes it's deafening. Please thank the team for keeping this in mind as they plan.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. SCDOT understands that Noise is the #1 concern of the community. Noise will be studied in detail in the next phase of work for the projects. When we move to the Environmental phase of work, the designs are developed further and will be presented to the public for comments. These more developed designs will include more detail on impacts including noise. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).		10/26/2021

	ID	Entry Date	Comment	Response	Response Format	: Date of Response
E#22	2	10/27/2021 / t 10/27/2021 /	Hello, I have been a resident of Hobcaw Creek Plantation for the past 7 years and hope to remain a resident for many years to come. As you know, our subdivision is on Long Point road and we see a significant amount of container truck traffic going to and from the port. There have been concerns as port traffic has increased, that the increased traffic on Long Point Rd. has caused some difficulties for residents entering and exiting our subdivision. There have also been safety concerns over reports of red lights being run through and a few instances over the past few years of port back ups causing an ability to access the neighborhood for several hours at a time. As you consider the best way to expand 526 going forward I sincerely ask that you consider the quality of life and safety of the residents in the neighborhoods surrounding the port. After reviewing the proposed options I believe that option 2 with a separate ramp dedicated to port traffic would be the best option for all involved. Would also ask you to consider a noise barrier protection wall in the coming proposals since the noise level has dramatically increased over the past few years ever since the natural green barrier was significantly thinned a couple of years ago. Thank you for listening to our concerns while you consider the options and I look forward to more discussion in the future.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). E#23	3	10/27/2021 a t	As a Charleston native, parent, homeowner and business owner in the Belle Hall/ Seacoast Parkway area of Mount Pleasant - residing here since 1997 after graduating College of Charleston - I specifically chose to live in South Mount Pleasant (as it's now referred) for a plethora of reasons including the days when rent for a two-bedroom townhouse off Chuck Dawley went for \$695.00 per month. We (my family) have experienced concerns, changes and adjustments while living close to 526 and the port which include but aren't limited to: Irraffic disasters over periods when the port transferred over to a new computer system, leaving 18-wheelers backed up for miles which not only affected I-526 traffic, it affected all inbound roads to Mount Pleasant such as the Ravenel Bridge making all routes clogged. Diverwhelming flooding in the area of Tidal Walk/Belle Hall when SCDOT clears the brush/tree lined area against \$26W —as a former Belle Hall Plantation resident, when elearing happened, flooding increased there as well. A tricked down effect in its full definition. When the trees/buffer/shrubs are removed, the wildlife that is "evicted" begin showing up in more populated areas; causing dangerous driving conditions as these animals live a true-life or FROGGER - often injuring drivers and sadly, resulting in a roadkill animal cafe. Let's not forget all the trash that floats to the top and eventually into our rivers. During the construction and road closures of the Ravenel Bridge, Mount Pleasant residents & those traveling to East of the Cooper only had one option to go back and forth—256 to 1-26. A commute that still resonates with residents even to this day and proof it was a spawn of poor infrastructure and planning. Even back then, when our population was half of what it is today, this detour caused huge traffic issues for the interstate and I-26/526 interchange giving residents only one way around — adding to the commute at all times. Not to mention all the broken down vehicles strewn along 526 near the Don Holt.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. Ε	25	10/27/2021	Please provide additional information on the Long Point/526 Interchange. As of now there is not enough information on flyover height, Iane width, acceleration lanes, and most importantly ROW land use. The land, environmental and noise pollution impact for this type of project needs to be fully understood by the general public and most importantly the affected communities.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. E	26		The Wed meeting at Park Circle was well presented and informative. Lots of folks willing and able to answer questions and talk about the project. The issue I have is not including the I-26, I-526 interchange in this project. With the port truck traffic not improving it would seem to create a bottleneck for traffic. I was told the the work on the I-26 I-526 interchange will be part of the West I-526 project but I still have to think that the East project needs to include it.	Mr. Jackson — Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. SCDOT is developing interstate improvements along the entire existing I-526 corridor. The projects are broken up into 2 separate segments, WEST which extends from Paul Cantrell Blvd in West Ashley to North Rhett Blvd in North Charleston, and the EAST which picks up at N Rhett Blvd and extend to the terminus at US 17 in Mount Pleasant. These future improvements consist of \$7 Billion worth of infrastructure projects that SCDOT will work to execute over the next 10-15 years. We would not be able to accomplish all this work in one big project, as that is not feasible from a construction contracting standpoint. The WEST project is further along in development and we are currently finalizing our Environmental Impact Statement for a Record of Decision on the project. Once we obtain these environmental approvals, then we will proceed with acquisition of Right of Way and Construction for the project. More details on the WEST improvements can be found at the links below: https://www.526iow.country.corridor.com/west/ https://www.526iow.country.corridor.com/west/#Alternatives Please let us know if you have any further questions or concerns by sending us an email (info@526Low.country.Corridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526iow.country.corridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square).		10/29/2021
Ε	27	10/29/2021	I am scrolling through the information about the 526 lane expansion and would like more information regarding the width of 526 past Long Point Rd, down to Hwy 17. Is there a rendering of how close the road widening will come to the existing homes? Has there been a study on how the neighborhood will be impacted along with property values? https://www.526lowcountrycorridor.com/eastvpim2021/#mobility-needs	Good Morning Ms. Myers — Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. The conceptual alignments for potential future improvements can be viewed on this mapping link: https://cdmsmith.maps.arcgis.com/apps/MapSeries/index.html?appid=fe86d08aec6948a2a171fd3c6950b413. If you zoom into the area you are most interested on the map, then you can toggle the different reasonable alternatives on and off by clicking on the alternative number in the middle column of the page. Let me know if you have difficulties with viewing the alternatives on this page and we can try and send you a PDF of the maps. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). Е	28	11/1/2021	Hello, My name is Ryan Mazalatis, and I'm a resident of Summerville, SC. I was wondering how much, if any, of the funding for the I-526 expasion is coming from the federal government as opposed to State funds.	Good Morning Mr. Mazalatis - The I-526 Lowcountry Corridor WEST which improves the existing I-526 corridor between Virginia Avenue and Paul Cantrell Blvd is funded with federal interstate upgrade funding primarily with some state funds that provide the required match funding to the federal funds. The I-526 Lowcountry Corridor EAST is a planning study and thus the projects that may be recommended out of that study are not yet funded projects. If you are referring to the Mark Clark Extension project, then that project is funded with local funds and only being administered by SCDOT. Please let me know if you have any other questions or concerns. Joy Riley, PE, PMP, CPM, DBIA 803-737-1346 rileyj@scdot.org

E#29	11/8/20	Good Morning, I am writing to let you know that I am one of the residents that WILL be impacted by the 526 expansion plan that is being planned, no matter which version is completed. I want to ask you to please choose the option that will least impact the homes on the west bound side. Of The options presented at the town meeting in the Jones Center, 2-I seems to be that option. I am very concerned because when I bought my house in 2016 I was told they might expand one lane in the east bound direction for the truck traffic and if that happened we would get a sound barrier. These plans are much not intrusive in all directions. I travel 526 several times a week from Long Point to Glen McConnell and back. No matter the time, the only problem seems to be at the 58/26 exits, unless the trucks are backed up on Long Point. Then I may have a 5 min Delay. Without accidents on the road, I can make that trip in 20 min. Please consider an option that just takes the truck traffic off and on the bridge without having to impact all the homes and businesses. I was told at the meeting in October that decreasing the speed limit from Daniel Island to the 17 exit in Mount Pleasant was not an option. It is the only place on 526 that it is 65mph and only for about 2 miles. Can you explain why we can't make it 55mph in that stretch, where big slow trucks are entering and exiting? It may even help with noise! (https://www.nonoise.org/resource/trans/highway/spnoise.htm) Please let me know that you have read this and I would appreciate some answers and to continue this discussion as the project moves forward. Thank you for hearing my voice.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. E#30	11/8/20	Ms. Riley, after attending the community meeting on October 26 in Mount Pleasant, I, as many others, came away very concerned and somewhat perplexed. I spent quite a bit of time at one of the stations and asked many questions (most of which could not be answered) about the proposals offered. I am a resident in the Etiwan Pointe community, which like many others, will be directly impacted by this project. My home will not be one that will be completely destroyed physically by the project, but one that will become basically unsellable because of it. We, as many others I am sure, love our neighborhood and fear it will be all but destroyed by the project. The second point, and maybe even the most valid, is the intended or maybe unintended consequence of the project, is the dumping of even more traffic on an already congested HWY 17. As I am sure you are aware, HWY 17 traffic is already at max capacity during peak hours. I do not know what the projected traffic count will be if this project goes forward, but I do know it will only further exacerbate an already problematic situation. I do not believe your intention is to just kick the can down the road (no pun intended) and just move the problem from one area to another, but I fear this will be another serious consequence. Yes, it may make it easier for the truck to get into and out of the port area but at what cost. The port in North Charleston is underutilized and it seems to me that should be the area which receives most of the attention. By removing 50% of the trucks that come to the Port in Mount Pleasant you have basically solved the congestion problem for phase 2 of the project, not worsened the problem on HWY 17 and saved money on the process. I realize that as areas grow, infrastructure must accommodate. However, each area reaches a saturation level with housing, traffic and population. As we have seen this area place moratorium on some building already, I fear we are nearing that phase in our community. There is only so much land that can be used without	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. Noise will also be evaluated in the design phase and information regarding potential noise mitigation	Email	11/10/2021
E#31	11/10/20	Please choose option 2. The dedicated port access to I526 would speed up traffic for the port while freeing up dangerous truck traffic on Long Point Rd. I have personally witnessed trucks running red lights and driving in both lanes speeding up to get in front of another truck. There is a lot of residential traffic on Long Point that includes young 1 drivers. Please help keep our children safe with a dedicated ramp from the port to 526. I really appreciate your attention	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. E#41	11/30/2021	It seems to me that the bulk of the traffic issues are at North Rhett and the i-26 merge that back up to Wando area. Otherwise, I'm not sure how creating a larger/wider wando bridge is really going to resolve inbound traffic congestion to Mt. Pleasant, when the interchanges and exits are somewhat maxed out now at Johnnie Dodds and Chuck Dawley. I also think the finalization of the widening of Clements Ferry will help if traffic can flow more rapidly to North Mount Pleasant via that corridor. Perhaps the most likely compromise is to do the Cooper River 526 bridge first and expand the 526 and i-26 interchanges from Daniel Island to I-26 so that traffic can better get off the interstate. Perhaps then you could consider, if needed, building another four+ lane bridge on the eastbound side of 526 leaving Mt. Pleasant that could initially and temporarily serve as a functional two-way bridge while the old bridge is torn down and another built in it's place to eventually add the needed lanes. I also think it's a shame to take the height of the Wando down to 65' since that basically eliminates half the sailboats that can travel up the river. I understand why there doesn't need to be a bridge of 135' in the wando, but it would seem to me that a 90' span would be more viable since there is already a much higher span.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The height of the proposed bridges would be established with coordination with the US Coast Guard which includes a navigational study on the channel. If there are users on the waterway with a need for a higher vertical clearance then that will be taken into consideration during the navigational study. The proposed height of 65' is the minimum height proposed, but the actual proposed height that the bridge design is based on will be determined by US Coast Guard once we start design on the actual project in the future. Part of the feedback from the public was to get feedback from those who regularly use the waterway. Additional feedback will be secured in the future from marinas to ascertain a more holistic picture of the actual uses during the navigational study. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258	Email	11/30/2021
E#42	11/30/2021	Our Charleston traffic is bad and its going to get unbearable as we continue to grow. This is my proposed map and an editorial the Post & Courier ran a couple of years ago. This solution is comprehensive and I've included a simple/fair way to pay for it. I wish our state government would have the courage to make this work. The basis for any traffic modeling include the regional travel demand model which takes into account local land uses, growth projections and any anticipated major changes in travel demand. This model is built and maintained by the Berkeley – Charleston - Dorchester Council of Governments or BCDCOG. This planning organization also develops the regional long range transportation plan which looks at potential alternative parallel routes in the area and models these proposed routes to evaluate their effectiveness in reducing congestion on the region's existing primary routes. If you would like to get more involved in your area's regional transportation planning efforts, then visit https://www.bcdcog.com/ and get more involved in this process. All of the preliminary traffic analysis for this project utilizes the regional travel model and local planning recommendations as the foundation for a project's traffic analysis. E#44	11/30/2021	Ms. Joy Riley, Re: I-526 Corridor EAST Thank you for allowing myself and family to comment via the comment portal provided. I have uploaded comments, but it would not allow for me to upload a document. I attended the In-person Public Meeting held on Oct. 26 in Mt. Pleasant and many compliments to your team for such a friendly, interactive environment. Nice job!! I wanted to send the satellite map /drawing of my proposed Port Trucking by-pass route which could start at the base of the Wando bridge and enters and exits directly to and from the Wando Port. This would provide easy, non-stop access for trucks and have minimal impact to homes and businesses in the area. Please add the attached to my comments provided on Nov. 30th. E#45		11/30/2021	Options 2 looks like a viable plan for removing most of the truck traffic on Long Point Rd, south of I526. Like most road planning in the Charleston Area future growth is grossly under estimated or totally ignored. I526 is a prime example. The truck lanes on the Don Holt & Wando Bridges are nothing more than traffic jams waiting to happen. As the right hand lanes always try to move over to the left lane(s), causing traffic to slow or stop. And then there's the jack rabbits that use it for a passing lane. Why didn't we build the entire length 6 lanes? Now we have to pay for the purchase of Millions of dollars worth of fairly newly constructed buildings on property that has skyrocketed in value. Please, over build to accommodate future growth.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. E#47			Ms. Riley, The alternatives associated with Lowcountry Corridor East Design Options in Sections 2 & 3 do not appear to consider the potential intersection options proposed for Long Point Road/Wando Port interchange. As a result, I cannot tell how the Long Point/Wando Terminal interchange options will affect the ROW or proposed roadway associated with the 526 alternatives in Sections 2 and 3. It appears that several of the options for the interchange may affect the 526 alternatives in the vicinity of my neighborhood. Can the SCDOT please send me the estimated ROW associated with the Long Point/Wando Terminal interchange options (preferably in KMZ or shapefile format) so that my neighbors and myself (who may be subject to relocation) may meaningfully comment on this? Thank you,	funded for development	Email	11/30/2021

E#49	11/30/2021	My name is Amy Carr and I live in Hobcaw Creek Plantation off of Long Point Road. Long Pokt Road near the port has become extremely dangerous. We've lived in HCP for 6 years and my family has almost been hot multiple times by a truck speeding trough the red light or going over the speed limit. The volume of trucks is outrageous. These are family neighbors and Long Point Road is becoming a truck highway. I worry EVERY single day that a family member or friend will be seriously injured or killed by one of the port trucks that travel to and from the Wando terminal. The volume of trucks is increasing and becoming a bigger problem daily. Someone will eventually lose their life and it just feels like the perfect opportunity to route these hard-working folks directly to the port off of \$26\$. I am also assuming this would save them time and help the port run more efficiently. I have two kids, 5 and 8 years old. I love them more than anything in the world and want to see them grow up just like every parent does. I don't want to lose one of them due to this issue. PLEASE ROUTE THE TRUCKS DIRECTLY TO THE WANDO TERMINAL FROM \$26\$. Here are the specifics that I support. Long Point Rd / Wando Port Interchange —Option #2 Rather than Tying up traffic at an already congested intersection, we strongly support your Option #2 which is to create a dedicated, truck-only interchange further up I-\$26 entering directly into and out of the port gates. This would allow for dedicated, truck-only traffic direct access to the Port gates without round-abouts, stop lights and regular car traffic experienced at the current Long Point Road intersection. Alternate I-\$26 Truck Exit/Entrance proposal: Direct truck-only port access road exiting off the base of the Wando Bridge directly into the port. This option would allow for all Port-related truck traffic to exit and enter I-\$16 with no stops or roundabouts. This option will also provide for minimal impact to businesses and residents. I-\$26 Lane Widening — Section 3 (At Long Point Road) I	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. The height of the proposed bridges would be established with coordination with the US Coast Guard which includes a navigational study on the channel. If there are users on the waterway with a need for a higher vertical clearance then that will be taken into consideration during the navigational study. The proposed height of 65' is the minimum height proposed, but the actual proposed height that the bridge design is based on will be determined by US Coast Guard once we start design on the actual project in the future. Part of the feedback from the public was to get feedback from those who regularly use the waterway. Additional feedback will be secured in the future from all marinas to ascertain a more holistic picture of the actual uses during the navigational study. Thank you for providing the detailed information in your letter. Please let us know if you have any further questions or concerns by sending us an email (info@526Lo	Email	12/1/2021
E#57	11/30/	0/2021 e	as a Hidden Cove resident for 29 years, the SC Ports tremendous growth has come at a price to the local homeowners. Primarily, the price is much higher truck traffic and even higher noise from operations at the Port. While it has been stated numerous times at Port communication events that the leadership at the Port are unapologetic about he growth. Hopefully, the SCDOT can offer some relief and reassure the community that our government does care for its citizens. Of the options presented, Long Point Road/Wando Port Interchange OPTION 2 appears to be the best option for our neighborhood and residents. E#58	12/1/		We live in Tidal Walk Community that will be impacted by this work. We are vehemently opposed to any solution that requires displacement of any homes/amenities in the process in our community and surrounding communities. We urge the team to look at solutions that minimally obstruct families/individuals lives.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Additional information and details of potential impacts would be developed in the next phase of work when these ideas are funded projects. SCDOT will bring additional design details out for public comments at that time. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development. Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). E#6	0	12/1/2021	Hi there We can already hear traffic from 526 in our neighborhood. Adding an extension to 526 closer to Belle Hall will be so detrimental to the hundreds of homeowners here. Please keep expansion away from here. Thank you	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting last fall. We heard your voice and will include your comment in our official project records. Please note that the information presented in this public information meeting is a Planning Study and the alternatives are early conceptual alignments that have not been designed yet. The information from this planning study will provide SCDOT with the potential scope and cost information they need to plan funding and schedules for future projects on this corridor. Email	3/17/2022
E#6	1	12/1/2021	I am writing to voice opinion in favor of Option#2. The portr traffic at times backs up to the Wando bridge. The only reasonable option is to have a direct path to the port for truck traffic.	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. E#6	2	12/1/2021	My name is Hollie Hines. I live in Hobcaw Creek Plantation with my husband, Russ, and our two sons, ages 11 and 8. The number of trucks going to and from the Wando terminal seems to increase every day. I see drivers run the red light at the entrance to our neighborhood multiple times per day, most of them going too fast. That is why I am asking for you to PLEASE ROUTE THE TRUCKS DIRECTLY TO THE WANDO TERMINAL FROM 526. Here are the specifics I support: Long Point Rd / Wando Port Interchange — Option #2 Rather than tying up traffic at an already congested intersection, we strongly support your Option #2 which is to create a dedicated, truck-only interchange further up I-526 entering directly into and out of the port gates. This would allow for dedicated, truck-only traffic direct access to the Port gates without round-abouts, stop lights and regular car traffic experienced at the current Long Point Road intersection. Alternate I-526 Truck Exit/Entrance proposal: Direct truck-only port access road exiting off the base of the Wando Bridge directly into the port. This option would allow for all Port-related truck traffic to exit and enter I-516 with no stops or roundabouts. This option will also provide for minimal impact to businesses and residents. I-526 Lane Widening — Section 3. (At Long Point Road) I support the I-526 "1-Lane widening to westbound exterior and interior". Barrier Sound Walls along Section 3 of I-526 Expansion Due to the current and future noise problems coming from the bridge which crosses Hobcaw Creek, I highly recommend the installation of noise barriers/walls. Due to the extremely close proximity to homes and businesses these sound walls should be installed all along the I-526 corridor in Section 3, to include the Hobcaw Creek bridge. (Mt. Pleasant).	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. E#	3	12/1/2021	My name is Eric Leineweber and I live in Hobcaw Creek Plantation off Longpoint Road. Over the years I have watched the port grow and grow and and personally I'm glad for it and the jobs it creates. Unfortunately the growth has filled Longpoint Road inside 526 with a steady stream of tractor trailers that fail to adhere to the speed limit or traffic lights. I have three children 8,13,15 the latter of which is now driving. I've almost been hit at the intersection by trucks running the red light and can only pray that none of my family or neighbors ever get hit. I've spoken to some of semi drivers and asked why the big hurry and apparently they get paid on delivered loads. Waiting for a traffic light cost them money and therefore they take the risk to speed and run lights at our potential expense. Additionally, over the years Long Point road industrial space has morphed into flex, retail, restaurant, office and sports centers. Long Point is not the sleepy road of the 1980's anymore. The amount of soccer moms will cars full of kids having to play frogger everyday to get out of almost each of the commercial driveways is scary. The solution seems pretty clear - Please route the trucks directly to 526. The drivers make more loads, the port makes more money and the people of Mount Pleasant are safer on this stretch of roadway. I support Option 2 for the interchange. Direct dedicated truck only traffic directly to the port. In regards to the widening of 526 in any scenario we need sound buffers along all residential property. E#	8		"Our neighborhood, Grassy Creek, is vehemently opposed to the condemnation of any home, HOA property or street that provides access to our subdivision. We are also strongly opposed to any fly-over bridge for port traffic that would be outside the existing ROW. We absolutely do not want port traffic being rerouted so that it merges onto the interstate directly outside of our neighborhood and encroaches into our community. There needs to be a significant improvement in the design or phasing of the new interstate project. Taking additional right of way on either side of the existing 526 ROW corridor, especially in Mt Pleasant, is overly burdensome on the existing homeowners and should be avoided at all costs. There is plenty of land available in the existing ROW for additional lanes of traffic, including a large grassed median. Using the existing median to add lanes would be more effective and less detrimental to our community, even if that means phasing the project for a longer construction period." E#6	59	12/1/2021	In order to protect tax-paying residents directly affected by the 526 projects, we require the following: 1. We must have a dedicated port access road to and from 526 for trucks, to get them off of Long Point Road 2. There must be sound barrier walls from the Wando bridge to Hwy 17 to protect the neighborhoods along 526, like Grassy Creek and Tidal Walk. E#78	12/1/202:	Our neighborhood, Grassy Creek, is vehemently opposed to the condemnation of any home, HOA property or street that provides access to our subdivision. We are also strongly opposed to any fly-over bridge for port traffic that would be outside the existing ROW. We absolutely do not want port traffic being rerouted so that it merges onto the interstate directly outside of our neighborhood and encroaches into our community. There needs to be a significant improvement in the design or phasing of the new interstate project. Taking additional right of way on either side of the existing 526 ROW corridor, especially in Mt Pleasant, is overly burdensome on the existing homeowners and should be avoided at all costs. There is plenty of land available in the existing ROW for additional lanes of traffic, including a large grassed median. Using the existing median to add lanes would be more effective and less detrimental to our community, even that means phasing the project for a longer construction period. Paige Newton	are developed. Noise will also be evaluated in the design phase and information regarding potential noise mitigation would be presented in future public information meetings once the projects from this planning study are funded for development.		12/2/2021
E#79	12/1/202:	My name is Lance Harris and I live in Hobcaw Creek Plantation off of Longmont Road in Mt Pleasant SC. Please construct a dedicated on/off ramp for the trucks leaving and entering the Spa Wando Terminal. These trucks need faster access to and from 526. They also need to be gotten off of Longpoint Road as they are very hazardous to cars entering and exiting neighborhoods off of LongPoint Road. We also need a a sound barrier wall constructed from the Wando Bridge to Hwy !7 to protect these neighborhoods from ever increasing noise pollution coming from 526 in the way of Jake brakes on trucks and cars with horribly loud mufflers. This noise pollution is lasting later into the night and earlier in the morning. Thank you for your consideration. E#83		12/1/2021	am a business owner with our office in the Long Point Center complex at the intersection of Long Point Road and I-526 in Mt. Pleasant. I am also a property owner living in lobcaw Creek Plantation for over 30 years. We have seen traffic increase dramatically in the years I have worked and lived in the area. I know improvements must be made, ut strongly recommend that Option 2 for the interchange be implemented to keep truck traffic out of the existing interchange. I am also aware of an option that includes a lirect truck-only access to the port. This would be ideal and should be pursued. In all cases, sound walls should be incorporated to protect existing houses and businesses rom the increased noise from the increased traffic and reduced buffers. E#86		: 12/1/2021 :	Hello - As a resident of belle hall, and we have lived in the Mount Pleasant area for about 10 years, it is imperative the following items are addressed: 1. We must have a dedicated port access road to and from 526 for trucks, to get them off of Long Point Road 2. There must be sound barrier walls from the Wando bridge to Hwy 17 to protect the neighborhoods along 526. It has become so LOUD at all times of the day and night, especially since trees have been cut down/removed and truck traffic has increased significantly. Please, please consider these two items. Thanks,	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records. E#87		12/1/2021 i	Hello, am writing to provide comments regarding the 526 East plans: strongly support the Long Point Road Option 2 to create a dedicated truck-only interchange further up I-526 entering directly into and out of the port gates. I live mmediately off of Long Point road and witness the extreme congestion and danger caused by this traffic every day. I do not let my kids leave our neighborhood on their bikes is this traffic is way too dangerous and will only get worse. PLEASE create this option to alleviate the terrible and worsening truck traffic. strongly support installation of sound barrier walls all along the I-526 corridor in Section 3, to include the Hobcaw Creek bridge in Mt. Pleasant. The noise continues to worsen and I worry about the future livability of our neighborhood as the traffic continues to increase. 'hank you! E#88		12/1/2021	We are 100% against the expedited linkage of I-526 from Virginia Avenue to Mt.Pleasant. Until the project that was approved 40 years ago is completed from Savannah dighway to Johns Island and James Island to Johns Island this is insane and completely unfair and discriminatory to the citizens of Johns Island. We have been being rapidly overdeveloped and have received zero infrastructure support from the DOT, City of Charleston and Charleston County. We have been paying taxes for over 45 years and get ero return. Mt. Pleasant's roads and infrastructure have always been top priority and it is extremely discriminatory against Johns Island's citizens. The Coastal Conservation league has fought this extension for over a decade claiming it would promote development. Well the development has doubled our population during those ten years and we are suffering from ridiculous traffic and deadly car accidents. Just because the median income of Johns Island is less than Mt. Pleasant is no excuse for this complete disregard of our much more needed infrastructure improvement with I-526 extension from the original 40 year old plan. VM#2		Option 2 on the project is obviously the correct choice to make. It also allows you to delete the project by modifying the entrance to Hobcaw Creek Plantation and save some money there that you could spend on a safer alternative which would be to give the trucks access from Long Point Road directly to 526. The access road will remove some of the truck traffic that is driving the decision of Hobcaw Bluff's entrance. Nobody but the Port needs the modification done and that's money we could save on that that we could spend on the safer alternative for the trucks to go directly on to 526. Thank you for your time. I hope someone will listen to this and considers my viewpoint. Thank you.			
		Hello this is Mark Schuler. I live at 557 Hidden Boulevard in Mount Pleasant, South Carolina. And I wanted to leave a comment about the Long Point Road/Wando Port interchange. I'm voting for Option 2 because that	Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records.		
VM#4		going to be a problem especially when the truck traffic increases due to higher demand. That bottleneck would slow down the supply chain. Also, Options 1 and 4 don't make any sense at all. They look like a big mess. VM#5	19-Nov-21	Hello my name is Kevin Newman. I live at 358 Stringer Alley in the Hidden Cove subdivision. I'm calling regarding the I-526 corridor in relation to Long Point Road and I just wanted to express my concerns. My in-laws were trying to get down here yesterday during the middle of the day and truck traffic was just impossible and they had to turn around and come back and I'd like to recommend that Option 2 to help alleviate some of the traffic here along Long Point Road would be very helpful. They were trying to deliver a birthday card to my daughter-in-law and unfortunately they couldn't make it down here to get it. So any consideration for this would be appreciated but the Option 2 would be my choice as it seems to be the one that would provide the larger percentage of truck traffic be alleviated from Long Point Road and give it better access to the I-526 corridor. Thank you very much.	No Response for Voicemail Comments			
VM#6	19-Nov-21	Good afternoon my name is Roman Pekar. The address is 3034 Shadow Lane in Charleston, South Carolina. The callback number is 843-813-7945. I have a concern about the proposed alternate at the intersection of North Rhett Avenue crossing the Norfolk Southern railroad. As of today, traffic is built up when the train is passing and it doesn't seem that the map includes this solution to go over it. My question is would it be more feasible to build an overpass than to once the changes are being planned and the budget was made, maybe it does make sense to build an overpass to escape the traffic buildup situations. Kids get late to school, us are getting late to work and all of that. If you consider the cost of the lost wages with kids missing school and all this over the given time it does seem feasible to build an overpass and include it into the project. I'm hoping to get feedback from you on that and my phone number is 843-813-7945. Thank you, have a good weekend.	No Response for Voicemail Comments			
VM#8		Good morning this is Connnie Turner at 610 Hidden Boulevard in the Hidden Cove subdivision in Mount Pleasant. My telephone number is 843-856-8529. I support the Long Point Road/Wando Port Interchange Option 2. Thank you.	No Response for Voicemail Comments			
VM#9		My name is John Simsar and I support Option 2. It alleviates safety hazards that we reguaraly face, taking a large percent of the truck traffic off Long Point Road by giving the port direct access to I526 without using Long Point Road. I live at 353 Anchor Circle off long point road in hidden cove neighborhood. My phone number is 843-991-4868. thank you, bye.	No Response for Voicemail Comments

			Thank you for submitting a comment for the I-526 Lowcountry Corridor EAST Public Information Meeting. We heard your voice and will include your comment in our official project records.		
VM#10		Hi, this is Mark Shuler. The address is 557 Hidden Boulevard, mount pleasant 29464 and I'm calling to comment on the longpoint road wando port interchange, I'm voting for option two, cause that is the best solution for truck traffic, as well as car traffic and I'm voting down options one and four because they do not look very good at all. Anyway, thank you so much and have a great day. Bye-bye	Please let us know if you have any further questions or concerns by sending us an email (info@526LowcountryCorridor.com) or calling/texting our project hotline (843-258-1135). You can also find more information on our project website (www.526lowcountrycorridor.com/east), or by visiting our Community Office, located at 5627 Rivers Avenue in North Charleston (Gas Lite Square). VM#13	30-Nov-21	Hi, this is Nancy Carmody. I live at 614 Palisades Drive, Mt Pleasant, SC. I am calling in regards to the I-526 corridor project and specifically want to leave a comment about the proposed expansion for EAST and improving the access to the port for the trucks, the Long Point Road/Wando Port interchange. I believe that Option 2 to create a dedicated truck-only interchange is important for multiple reasons safety being the key one and all the other itemized benefits that I can see in regards to improving traffic flow, preventing the times exchange that happens at Long Point currently. The other thing that I would like to say is that I don't believe that the noise barriers are worth much and are necessary. I think they are more of a sight barrier in terms of the barrier soundwalls but I do think that perhaps over time there could be better noise sound walls built. It just doesn't seem that effective. Thank you so much. This is Patricia Sanders. 661 Hobcaw Bluff Drive in Hobcaw Creek Plantation off Long Point Road. My phone number is 843-	No Response for Voicemail Comments			
VM#14		469-3773. I support Option 2 to divert truck traffic away from Long Point Road and making Long Point Road a safer place to drive. Thank you.	No Response for Voicemail Comments			
VM#15		This is Lauretta Pinckin and I'm at 510 South Columbia Drive in Decatur, Georgia 30030 and my phone is 770-355-4205 and I'm calling specifically to reference to the east side part of the 526 project. For new build it will further, in my opinion, degrade and diminish the African-American population on St. Thomas Island. I grew up there. I return at least four times a year. Unfortunately, because of COVID-19, I did not travel at all last year and only found out about the project a couple of months ago. And I'm concerned about two things. First of all when I-526 before it came, we were reassured that there would be sidewalks installed for the area. Well in the portion of Clements Ferry Road where the bridges or the proposed bridges and even the existing bridges there are no sidewalks. So are there plans to have sidewalks along Clements Ferry Road? And the other thing is that your project does not indicate how many individuals will be displaced by either the new build. Well, it sounds like everything is going to be a new bridge as opposed to adding onto the existing one but how may people do those building those numbers that you include represent? And, can you parse out to some degree, I'm assuming a significant number of them, an overwhelming number of them occupants African American. And I think, that's probably it. I personally am not in favor of having any extension of the bridges or newer. Oh, because the area has changed so much and there's so much traffic and so much trash along Clements Ferry Road since 526 came into existence, especially on the east of I guess the southbound side of Clements Ferry Road. So that's it, that's my comment or whatever it's for. Thanks,	No Response for Voicemail Comments

V	M#16 1-Dec-2	Hello my name is Jamie Meyer. I live at 1508 Winston Court in Mount Pleasant. I'm calling about I-526 Lowcountry Corridor East impact and wanted to make my recommendation specifically for the Long Point Road/Wando Port Interchange option number 2 with the direct access off I-526. Also, there was an alternative truck accident entrance, that's a direct truck only port access road exiting off the base of the Wando bridge directly into the port. This option would allow all port related truck traffic to exit to enter 526 but no stops or roundabouts. This option will also provide for minimal impact to businesses and residents. And then I also wanted to support the I-526 lane widening section 3 at Long Point Road. I support 526 one lane widening to the westbound exterior and interior and one lane widening to the eastbound exterior and interior. And then most importantly, I want to express my concern and support for barrier sound walls along section 3 of I-526 expansion due to the current and future noise problems coming from the bridge that crosses Hobcaw Creek. I highly recommend the installation of noise barriers and noise walls due to the extremely close proximity to homes and businesses these sound walls should be installed all along the I-526 corridor in section 3 to include the Hobcaw Creek bridge. And I can be called back at 843-991-3548. Thank you.	No Response for Voicemail Comments

> I-526 East Lowcountry Corridor Improvements Project Re:

Dear Ms. Riley,

On behalf of the South Carolina Coastal Conservation League and Charleston Moves, the Southern Environmental Law Center submits these comments on the Planning and Environmental Linkages Study ("PEL") materials for the I-526 East Lowcountry Corridor Project ("LCC EAST project"). Through PEL, SCDOT has defined the LCC EAST purpose to "improve travel time reliability & reduce congestion along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant."1

Our groups have also been engaging in the Draft Environmental Impact Statement ("EIS") for the I-526 West Lowcountry Corridor Project² ("LCC WEST") and the Draft Supplemental EIS for the I-526 Mark Clark Extension³ ("Mark Clark Extension"). We look forward to continued engagement on the LCC EAST project as it advances into the NEPA scoping phase.

¹ LCC EAST Public Information Meeting Handout, SCDOT (October 2021),

https://www.526lowcountrycorridor.com/wp-content/uploads/2021/10/526-EAST-PIM2-Handout_2021-10-11.pdf ² As part of the LCC WEST project, SCDOT has recommended widening I-526 from four to eight lanes from Paul Cantrell Boulevard to I-26 and to make improvements at the I-26/I-526 interchange as well as other interchanges along I-526 from West Ashley through North Charleston.

³ The Mark Clark Extension is a proposed four-lane parkway which would join with I-526 in West Ashley and extend into Johns Island and James Island. The recommended alternative for the Mark Clark Extension, Alternative G, includes a multi-use path along the entire 9.5-mile length of the roadway.

I. SCDOT Must Seriously Consider Alternatives Other than Widening.

At this phase, SCDOT has not meaningfully analyzed alternatives to meet their purpose and need other than widening in proximity to the existing corridor. With a \$4 billion price tag associated with the LCC EAST proposal, roughly \$308 million per mile, it is crucial that less costly and potentially more effective alternatives are thoroughly assessed. Before selecting a preferred alternative, the agency must consider whether more modest structural improvements, in combination with Transportation Demand Management ("TDM") (e.g., mass transit, bicycle and pedestrian paths, managed lanes, and other strategies), would meet the purpose and need.

A. Multimodal and TDM solutions should not be deferred to an uncertain future date.

Though SCDOT names connectivity and multimodal opportunities as two of seven goals for LCC EAST,⁵ the PEL study does not consider nonstructural alternatives such as multimodal transportation and TDM. SCDOT has stated that the LCC EAST and LCC WEST projects are the last possible opportunity to widen I-526, and that, if completed, the eight-lane roadway will still be over capacity at peak hours. According to the State Highway Induced Frequency of Travel ("SHIFT") calculator,⁶ adding 13 miles of interstate in Charleston will generate 57-85 million *additional* vehicle miles traveled per year. This induced demand means that within 20 years of project completion, the entire interstate may be congested to levels before the widening, even outside of peak hours. Drivers will face the same traffic (or worse) after LCC East is built, and both taxpayers and the environment will be far worse off. Multimodal solutions are therefore needed to address future congestion, and should be developed in tandem with the proposed widening to ensure compatibility, reduce redundant design and construction, and allow for learning and adaptation over time.

We expect SCDOT to take concrete steps now, before completion of the LCC WEST and LCC EAST projects, to develop and expand TDM in this system that will take advantage of technological upgrades to I-526. We believe the most pragmatic approach is a combination of investing in "robust express bus service" and park-and-rides for Corridor G (stretching along the current I-526 route from West Ashley to Mount Pleasant), as recommended by the BCD Council of Government's ("BCDCOG") Regional Transit Framework Plan; investing in bike-ped linkages to facilitate safe connections from the I-526 multimodal river crossings to destinations (employment hubs, retail centers and neighborhoods) along the corridor; and incorporating Transit Systems Management and Operations (TSMO) options, including managed lanes,

⁶ State Highway Induced Frequency of Travel Calculator, ROCKY MOUNTAIN INSTITUTE, https://shift.rmi.org/.

⁴ The traffic projections in the virtual public meeting materials do not provide substantive detail to support SCDOT's traffic projections and travel time estimations. In order for the public to meaningfully engage with this process, SCDOT must show their math on the traffic projections and other calculations used to justify the selection and screening of alternatives.

⁵ LCC EAST Handout, *supra* note 1, at 2.

enhanced lane markings and traveler information postings, and reserving shoulders for busesonly during rush hour. These strategies need to be carried through the planning process now and integrated into project design, not after the corridor reaches an unsatisfactory level of service yet again.

Regional transportation plans, including the RTFP and LRTP, provide a roadmap for implementing such an express bus service on I-526, while the Lowcountry Rapid Transit Line, the region's largest ever investment in transit, will intersect I-526 at Rivers Avenue with stations proposed at Remount Road and Mall Drive, providing connectivity to a potential bus route along I-526. It is not enough for the LCC EAST project to simply include shoulders wide enough to accommodate future bus lanes—SCDOT must demonstrate a commitment to mass transit in the near-term, in line with its letter vowing more effective and expanded transit services.

B. SCDOT should fund and construct complete bicycle and pedestrian facilities as a core component of the LCC EAST project.

SCDOT has committed to providing a 14-foot multi-use path over all river crossings in the I-526 Lowcountry Corridor project, including the crossings of the Cooper and Wando Rivers for the LCC EAST project. While a positive design feature, these river crossings are isolated from other safe multi-use infrastructure. SCDOT must offer a genuine mobility alternative for residents and commuters, and thus reduce congestion on I-526, by connecting to a larger bicycle and pedestrian ("bike-ped") path along the entire proposed LCC EAST and LCC WEST corridor. This is also part of a larger TDM strategy.

SCDOT identifies multimodal transportation, including bike-ped, as one of seven goals in the PEL study. While the LCC EAST alternatives do not currently integrate multimodal transportation throughout the corridor, the goal outlined by SCDOT is consistent with the overwhelming will of Charleston communities. Regional transportation plans have long prioritized bike-ped accommodations on I-526. The WalkBike Berkeley-Charleston-Dorchester ("BCD") plan—developed in 2017 by municipalities, agencies, and stakeholders such as the City of Charleston, the Town of Mount Pleasant, and the City of North Charleston—recommends a shared use path along I-526 (from Paul Cantrell Boulevard to 3,350 feet east of Virginia Avenue) for Phases 1 and 2 of implementation. The BCDCOG adopted the recommendation in its 2040 Long-Range Transportation Plan ("LRTP"), which contemplates that path construction would coincide with an I-526 roadway project such as the proposed widening. Per the LRTP, this complementary approach would create funding efficiencies by avoiding redundant design and

⁷ See https://lowcountryrapidtransit.com/about.html.

⁸ LCC EAST Handout at 2. (Multimodal: Enhance movement through the corridor through other modes such as carpool, transit, walk, or bike.)

⁹ WalkBike BCD, BCDCOG (2017), Appendix D at 2, 12, https://www.walkbikebcd.com/.

¹⁰ LRTP Chapter 3: Pedestrian and Bicycle Mobility, BCDCOG, at 106–08, https://www.bcdcog.com/transportation/planning/long-range-transportation-plan/.

construction. It is important to note that SCDOT participated in development of the WalkBike BCD plan and did not express opposition to the shared use path or indicate that it would be unlawful, unfeasible, or otherwise inadvisable.

Per the SCDOT February 4, 2021 Departmental Directive 28 on Complete Streets,

All Department projects that are currently in the project development phase at the effective date of this Directive should be reviewed to determine if multimodal accommodations should be incorporated into the proposed project based on the guidance above [pages 2-3 of Directive]. It is the Department's intent to quickly adapt these new guidelines to existing projects in the project development pipeline, short of requiring new permits or additional right of way impacts where right of way has already been secured from landowners.

Far from solely a recreational asset, a shared use path along I-526 has the potential to materially improve connectivity and mobility in the region and thus advance the purpose and need of the LCC EAST project and the goals of SCDOT's Departmental Directive. The BCDCOG's Regional Transit Framework Plan ("RTFP") identifies I-526 as having high current and future residential, commercial, and employment densities, as well as a high density of transit-reliant communities. As such, the corridor is identified as a priority transit route. Transit access, complemented by bike-ped accommodations, would offer residents and workers in the area a mobility alternative that would relieve congestion on the interstate highway. Recognizing the bike-ped path's utility, the BCDCOG, municipalities, and other stakeholders have continuously pushed for its inclusion in both the LCC EAST and LCC WEST projects. In September and October 2020, the BCDCOG and CHATS Transportation Policy Committee, adopted resolutions requesting that "SCDOT and FHWA include connected bicycle, pedestrian and public transit infrastructure in the design, funding and installation of both the LCC EAST and WEST projects."

II. The Major Impacts to Wetlands, Floodplains, and Other Resources Must Be Appropriately Avoided, Minimized, and Mitigated.

Each of the "reasonable alternatives" considered in the PEL study, aside from the No Build alternative, would inflict massive damage to wetland and floodplain resources. The seven alternatives considered by SCDOT propose a range of 167 acres to 179 acres of wetland impacts. Additionally, each alternative would impact at least two public park facilities and require dozens of residential and commercial relocations. ¹³

As a threshold matter, nearly 170 acres of destroyed wetlands is an unacceptable

4

¹¹ Lowcountry Corridor Resolution, BCDCOG (September 28, 2020).

¹² LCC EAST Handout at 6.

¹³ *Id*.

"minimum" impact, particularly for a mere 13 miles of roadway. Due to the enormous scale of the proposed impacts, SCDOT must work to further avoid and minimize damages to the ecosystem and community resources. Additionally, these impacts cannot be considered in isolation; the LCC EAST impacts represent just a portion of damages associated with planned updates and expansions of the I-526 corridor. The cumulative impacts of the LCC EAST, LCC WEST, and Mark Clark Extension projects pose a disastrous threat to the Charleston Harbor watershed, and these cumulative damages must be thoroughly considered by SCDOT.

A. Ensure the Least Damaging Practicable Alternative is selected.

As proposed, the project will have significant wetland impacts; therefore, this project must comply with the Clean Water Act Section 404(b)(1) Guidelines (the "Guidelines"). 33 C.F.R. § 320.4(a)(1). The Guidelines provide significant protection to wetlands, and the degradation or destruction of wetlands "is considered to be among the most severe environmental impacts covered by these Guidelines." 40 C.F.R. § 230.1(d). The Guidelines state that the Corps may not permit a discharge of dredged or fill material if there is a less damaging "practicable alternative," or if the discharge will "cause or contribute to significant degradation of the waters of the United States." *Id.* § 230.10(a), (c).

In applying the practicable alternative standard, the Corps must consider the project's "basic purpose." *See id.* § 230.10(a)(3). If the project's basic purpose is not water dependent, the Guidelines apply a presumption that a practicable alternative with less adverse environmental impact on wetlands exists. *Id.* SCDOT's stated project purpose is not water dependent. An alternative "is practicable if it is available and capable of being done after taking into consideration cost, existing technology, and logistics in light of overall project purpose." *Id.* § 230.10(a)(2). Where a discharge is proposed for a wetland or other special aquatic site, all practicable alternatives to the proposed discharge that do not involve a discharge to the wetland "are presumed to have less adverse impact on the aquatic ecosystem, unless clearly demonstrated otherwise." *Id.* § 230.10(a)(3). The burden is on SCDOT to rebut the presumption by "clearly demonstrat[ing]" that a less damaging practicable alternative is not available. *See id.*

SCDOT is required to take all appropriate and practicable steps to avoid and minimize adverse impacts to waters of the United States. *See* 40 C.F.R. § 230.91(c)(2). In this early project stage, it is crucial that SCDOT evaluate all possible alternatives that would further avoid and minimize impacts to wetlands, including alternative alignments, port barging, and multimodal transportation solutions.¹⁴

_

¹⁴ Additionally, under each of the alternatives considered, a significant amount of land would be converted from pervious to impervious surface, generating new runoff. In general stormwater modeling practice, on average 15% of water that falls on pervious surfaces will result in runoff, whereas 90% of water that falls on impervious surfaces will generate runoff. SCDOT must incorporate low-impact development stormwater control methods into the LCC-

Given the significant public benefits wetlands provide, SCDOT must avoid wetland impacts to the greatest extent possible. Coastal wetland systems, such as those that this project will fill, provide important wave buffering and flood retention services for coastal communities and should be protected to maintain these hazard mitigation services. ¹⁵ An assessment following Hurricane Sandy found that coastal wetlands helped affected states avoid \$625 million in direct damages during the storm. ¹⁶ The Houston area lost 4 billion gallons worth of flood retention after losing 5.5 percent of its freshwater wetlands between 1992 and 2010. ¹⁷ Charleston's Church Creek basin lost 24 percent of its wetland area from 1996 to 2010, and the community's flooding woes became a recurring problem over that time period. Maintaining existing wetlands so that they continue to provide natural flood storage and storm buffering helps avoid taxpayerfunded flood control projects in the future. In light of the stronger storms and sea level rise the South Carolina coast is already experiencing due to climate change, it is crucial to preserve wetlands and their services to the greatest extent possible. ¹⁸

B. SCDOT Must Consider the Cumulative Impacts of LCC East, LCC West, and the Mark Clark Extension.

The LCC EAST impacts represent just a portion of damages associated with proposed updates and expansions of the I-526 corridor. As proposed, the 9.7-mile LCC WEST recommended preferred alternative would impact 48.3 acres of wetlands and 3,634 feet of freshwater streams, require 113 property relocations (including 81 residential displacements and 17 commercial displacements), and cost \$1.43 billion. The 9.5-mile Mark Clark Extension is projected to cost about \$772 million (in 2019 dollars; the final cost will likely be much higher), destroy over 31 acres of wetlands, and impact 7,486 feet of freshwater streams, marine tributaries, and tidal ditches.

Combined, these three projects would damage nearly 250 acres of wetlands within the Cooper River and Stono River watersheds surrounding Charleston Harbor. This is an enormous

EAST design in order to mitigate for this additional runoff and the associated increase in pollution. *See* https://www.bhamgov.org/A1_Runoff%20Potential.pdf and

loss and is further justification for SCDOT to complete additional avoidance and minimization of wetland resources in each of these projects. Considering these cumulative impacts, we urge SCDOT to reduce wetland damages through alternative modes of transportation, described above, that could significantly reduce project impacts.

III. SCDOT Must Show its Work to the Public and Account for Induced Effects

SCDOT has not disclosed any models or traffic data to substantiate its bold claims about traffic benefits from adding lanes to LCC East. Without demonstrating to the public that road widening will, in fact, serve the project purpose, there is no point in proceeding to the NEPA process. Reduced traffic does not automatically flow from road expansion—indeed, the opposite is quite often the case.

SCDOT's traffic models typically ignore the established concepts of induced development and traffic that tend to follow highway builds in congested urban areas. These phenomena swallow-up increased capacity with increased road usage, leaving drivers in the same traffic as before the new road build and taxpayers and the environment much worse off. As Professor Susan Handy explains, "adding capacity decreases travel time, in effect lowering the 'price 'of driving; and when prices go down, the quantity of driving goes up. Induced travel counteracts the effectiveness of capacity expansion as a strategy for alleviating traffic congestion"

By contrast, the increased congestion predicted on I-526 East without the build alternatives may have several positive effects on land use and transportation patterns that must be accounted for. For example, increased congestion can induce business and labor growth closer to residential areas, which minimizes commutes in the long run and makes maximal use of existing infrastructure. Increased congestion on I-526 East may also channel residential and business growth towards the Lowcountry Rapid Transit Line and away from sprawled developments serviced or created by an I-526 East expansion. Channeling residential and business growth towards mass transit systems would combat sprawl, decrease reliance on inefficient single-user vehicles, reduce vehicle miles traveled and greenhouse gas emissions, make maximal use of existing infrastructure, and avert the myriad of ecological harms that would flow from expanding I-526 East. "No build" options, including mass transit and fostering more concentrated development, offer real solutions to Charleston's traffic problems; "build" options typically offer illusory benefits.

In short, SCDOT must disclose the data and methodology behind its traffic predictions, and fully account for induced traffic and development sprawl for all "build" and "no build" alternatives.

7

_

IV. Conclusion

We respectfully request that, as SCDOT advances the LCC EAST project to the NEPA phase, the agency consider building TDM, multimodal solutions into the project and seek to avoid and minimize harm to surrounding communities and wetlands. In addition, pursuant to the Clean Water Act and state law, the SCDOT must ensure that impacts to wetlands and other waters are appropriately avoided, minimized, and, lastly, mitigated. Thank you for your consideration of these comments.

Sincerely,

Christopher K. DeScherer

South Carolina Office Director

March 17, 2022

Christopher K. DeScherer, Director Southern Environmental Law Center 525 East Bay Street, Suite 200 Charleston, SC 29403

Dear Mr. DeScherer:

Thank you for providing a comment during the official public comment period for the I-526 Lowcountry Corridor EAST (I-526 LCC EAST) public information meeting which was open from October 11 to December 1, 2021. Your interest in this project is appreciated.

Efforts for I-526 LCC EAST began in the spring of 2018 with the preparation of existing conditions reports on traffic, safety, and infrastructure along I-526 from Virginia Avenue in North Charleston to U.S. 17 in Mount Pleasant. Since that time, I-526 LCC EAST transitioned formally to a Planning & Environmental Linkages (PEL) study. A PEL study is a high-level, corridor-level planning study designed to identify existing and projected transportation issues within the corridor through analysis and public and stakeholder engagement and is a precursor to the National Environmental Policy Act (NEPA) environmental process.

An initial public meeting was held in mid-2020 to help better define the needs within the corridor. A second public meeting was held late 2021 to present the analysis completed to-date and the preliminary alternatives and to ask for additional feedback. Input received during this process is helping to establish the purpose, needs, and priorities for future improvements within this corridor. The Department will incorporate the input received and publish the PEL Study in Spring 2022.

The PEL process has included a coordination process with local stakeholders to reinforce the integration of local needs, plans and projects. These partnerships with BCDCOG, Charleston and Berkeley Counties, the Town of Mount Pleasant, and the City of Charleston have been maintained to promote regional cooperation to address shared mobility goals. A summary of public and stakeholder coordination efforts will be documented in the PEL study.

The PEL study recommends possible future projects and estimated costs for consideration as part of SCDOT's future statewide transportation planning process. Recommendations are also included for other project partners to consider as part of local implementation efforts. If and when projects are funded, they would advance to the environmental phase: NEPA. During that process, the range of alternatives would be further refined and narrowed down to a recommended preferred alternative based on additional studies, engineering design, and public

input. During the NEPA analysis, new or modified alternatives may be introduced in order to avoid and minimize impacts as more detailed design information is developed. Noise and right-of-way impacts would be also be analyzed in detail in the next phase of work.

Multimodal and Travel Demand Management Solutions

The draft purpose and need for transportation improvements along this corridor is to reduce congestion and improve travel time reliability along I-526 from Virginia Avenue in North Charleston to U.S. 17 in Mount Pleasant as well as address design deficiencies and mobility challenges in the corridor. The study includes multimodal supporting goals to enhance mobility for people and goods through the corridor, including modes other than single occupancy vehicles, such as carpool, mass transit, walk, bike or truck. While a goal is not a need that will substantially reduce congestion, it does provide guidance for alternatives development and evaluation throughout the PEL process. It is important to recognize that the existing infrastructure will not safely support incorporation of alternative congestion management solutions in its existing condition.

The project team considered and continues to evaluate a series of strategies that focus on operational improvements, known as Transportation Systems Management & Operations (TSMO). These TSMO concepts were identified based on strategies outlined in the *CHATS Congestion Management Process Report (2019)*, existing and future traffic conditions, and input received through public and stakeholder outreach efforts. The TSMO options included managed lane concepts such as shoulder lane use and dedicated transit lanes; operational and travel demand management strategies such as traveler information systems and enhanced lane markings; and multimodal improvements such as adding a multiuse path and local bike and pedestrian connections, to name a few.

Because of physical constraints with the existing bridges, shoulders, and roadway, it would not be possible to retrofit the corridor with enough TSMO strategies to fully address the capacity needs of the corridor. It is important to note that many of these TSMO strategies, such as providing a dedicated lane for an express bus service, would require major reconstruction. Alternatives development is even more challenging since approximately 65 percent of the corridor is on elevated bridge structures. SCDOT studied restriping the section of I-526 between I-26 and Clements Ferry Road, but the safety analysis predicted a significant increase in crashes without the addition of a shoulder. Shoulders are important for safety as they allow drivers to pull out of the way of traffic more safely after accidents, and they provide an area for drivers to move to avoid crashes or recover control of their vehicle.

While TSMO strategies do not appear to provide enough improvement to be viable as standalone alternatives, they could provide advantages in combination with future widening to prolong an acceptable level of performance. As such, we will continue to evaluate and incorporate TSMO strategies as the design is progressed during the NEPA phase. This approach would contribute to meeting the stated purpose and need and support the project goals by prolonging the performance life of the eventual recommended preferred alternative by constructing a modern, multimodal corridor. As we develop committed projects on the corridor, we will continue ongoing coordination with local planning organizations to ensure that the final design details of these projects will fully support and enhance transit plans and future alternative congestion management practices.

SCDOT previously invested in travel demand management (TDM) and modal strategies that were identified through initial corridor studies on I-526, such as carpool/rideshare/vanpool program, CHATS Regional Park & Ride Development Project, among others. These ongoing projects should assist in reducing congestion incrementally as we develop long-term strategies for managing congestion on this corridor.

Multiuse Path

SCDOT has committed to providing a 14-foot multiuse path over all major river crossings along the I-526 LCC, including the Cooper and Wando Rivers. When evaluating where to locate this multiuse path, we considered the existing parallel accommodations and current local plans for connections. In many instances, multiuse paths already exist or are planned along the EAST corridor, such as along Clements Ferry Road. While shared use accommodations may be constructed parallel to high speed interstate corridors, SCDOT must consider whether there are safer alternatives to transition away from the interstate mainline where possible. SCDOT will work with local governments and planning organizations to identify the safest connections to the river crossings that meet the needs of the community and provide the safest options for pathway users. In compliance with SCDOT's complete streets policy, multimodal accommodations prescribed by local plans in the project study area would be included in the scope of the future projects on the corridor. In the case that there is no existing accommodations to connect to at the time of construction, then we would construct the shelf or provide the additional bridge width so that the pathway connections can be made in the future. In other words, we would not be able to construct a pathway that does not have logical termini for a connection or destination point.

Environmental Impacts

This study is a high-level planning study focused on identifying improvement options that would address the needs on the corridor, and the current wetland impact estimates represent worst-case assumptions. As future projects enter the environmental phase of work, the roadway and bridge designs will be advanced in greater detail that will allow the project team to minimize the impacts to the community and the natural environment throughout the design development.

During the NEPA evaluation of a project, SCDOT considers cumulative impacts in accordance with the Council on Environmental Quality's guidance document *Considering Cumulative Effects under the National Environmental Policy Act* (January 1997) and guidance from the American Association of State Highway and Transportation Official's Handbook for Assessing Indirect and Cumulative Effects Under NEPA (2016). SCDOT anticipates having the ability to evaluate and develop further avoidance and minimization strategies for the LCC East, LCC West, and Mark Clark Extension projects as they advance through the NEPA and permitting stages.

Traffic Analysis

The traffic forecasts utilized in the planning study area were derived from the Charleston Area Transportation Study (CHATS) travel demand model, developed, and maintained by the Berkeley-Charleston-Dorchester Council of Governments (BCDCOG). This work was conducted in conjunction and with careful review by FHWA. Induced demand is the result of travel choice, the introduction of new capacity, and land development decisions which are accounted for in the local travel forecasting models. In addition to travel demand modeling, travel time analyses were

conducted to estimate the travel time performance metrics for the range of alternatives for the corridor. The full documentation of these studies are included as an appendix to the PEL and will be included in the project website, for reference, when the PEL is complete.

I-526, in its current configuration, has only two travel lanes in each direction, plus truck climbing lanes in some locations, with substandard shoulders that vary from 4 feet to 10 feet in width. As congestion worsens, vehicle incidents are expected to increase, resulting in additional times where mobility is ceased until the incident can be safely cleared. With regional growth to continue, it is projected that by 2050 traffic on I-526 is expected to exceed 100,000 vehicles per day without any improvements or additional capacity. Without physical improvements to the existing infrastructure, SCDOT will have limited options for managing safety and congestion for even the existing travel demand on this corridor.

SCDOT treats the various studies conducted during the development of the PEL study as a reference catalog of input to future NEPA studies. Those work products are found in a collection of technical memoranda. At the conclusion of the PEL study, following SCDOT and FHWA approval, all supporting technical memoranda will be available on the study website for public information and for careful consideration should elements of the corridor advance into the NEPA process.

Your interest in the I-526 LCC EAST study is valued, and SCDOT assures you that all suggestions, objections, and concerns are carefully considered. Your comments have been made part of the official record. As future projects are advanced into the environmental phase of work, all of the alternatives and studies will be re-evaluated and new alternatives may be introduced as updated studies are evaluated in the project development process. There will also be additional opportunities to review this updated information and provide input in the next phase of work.

If you should have any further questions, please contact me directly at info@526LowcountryCorridor.com. Frequently Asked Questions

Public Information Meeting 2: ASKED & ANSWERED

You've asked, we're answering – Answers to questions and comments received as part of the public comment period held from October 11 to December 1, 2021.

1. What is the status of the I-526 Lowcountry Corridor EAST (I-526 LCC EAST) project?

The I-526 LCC EAST began in the spring of 2018 as a set of planning studies to conduct existing conditions reports on traffic, safety, and condition of the infrastructure. Since that time, the I-526 LCC EAST transitioned formally to a Planning & Environmental Linkages (PEL) study. An initial public information meeting was held in 2020 to help define the needs of the corridor. A second public information meeting was held in late 2021 to present the analysis completed to-date along with the reasonable alternatives and to ask for additional feedback. Input received during this process is helping to establish the purpose, needs, and priorities for future improvements within this corridor. Based on the input received, we plan to conclude the PEL Study early this year (2022).

2. Will I get to vote on which alternative I want to move forward?

The I-526 LCC EAST is a planning-level study that provides recommended projects and costs for consideration in SCDOT's future statewide transportation plans. This process does not include a public vote, however all comments received are reviewed and considered before the final report is published. The support from the community for certain improvements does assist SCDOT in developing projects that balance the transportation needs with the preferences of the community and the natural environment.

3. Why were improvements not suggested at all interchanges and only at Long Point Road?

Initially, the project purpose was focused on improving travel time reliability on the mainline only with only limited modifications at interchanges. Based on the current reasonable alternatives, the project team established that some level of improvement and reconstruction would be needed at all interchanges to accommodate the widening of the interstate mainline. Based on the studies done to date, it is anticipated that the interchange type at Clements Ferry Road would stay the same; however, ramps would have to be relocated to make room for the widened mainline. Most of the Daniel Island interchange could likely be retained; however, some work would be needed at the interstate tie-ins. The Long Point Road Interchange stands out at this phase of analysis, in that, it appears a different type of interchange may be needed at Long Point Road to address current and projected deficiencies.

4. Why are more details on noise not available?

As a planning study, we are currently defining the transportation challenges and range of possible alternatives. As the project advances into the environmental process, these concepts will be further refined. Having a refined design would allow us to model the potential noise more accurately and explore various noise reduction strategies.

5. How does SCDOT decide which communities get noise walls and which do not?

Once SCDOT has completed the detailed noise analysis during the National Environmental Policy Act (NEPA) phase of the project (environmental process), and potential noise impacts are identified, the following questions will be considered:

- What are the current conditions? The project team will collect data and establish a baseline for
 existing conditions currently experienced in the corridor. All project alternatives will be
 compared with the amount of noise currently experienced.
- What are the projected future conditions? Noise abatement is based upon projected traffic
 volumes in a future year, typically 20-30 years after construction is anticipated to begin. This is
 done to ensure that additional traffic volume, which could generate additional noise impacts,
 will be considered.
- Would a noise wall reduce the noise enough to justify its construction? Sometimes, a noise wall will not reduce the noise enough to be considered reasonable and/or feasible.
- Is a noise wall technically feasible? Every road is different. Many factors are considered such as topography, safety, drainage, utilities, maintenance of the wall, and whether driveways and side road access will be impacted.
- How many people would hear a difference in the noise? Is that number high enough to justify
 the cost? Sometimes, the cost is too high to build a wall when compared to the benefits
 received.
- Does a simple majority of property owners and tenants who receive a predicted noise level reduction due to the construction of a noise wall actually want the wall? Public preference for or against a wall is obtained through a balloting process.

6. Why are more details on right-of-way impacts not available? When will we hear more?

As a planning study, we only have design concepts with conservatively established right-of-way limits. When the project advances into the federal environmental review process, NEPA, these concepts will be further refined, and more detailed designs will be developed. More detailed designs will help to better determine, avoid, and minimize possible right-of-way impacts. This will be shared with the public and feedback would be gathered before any final decisions are made.

7. How much right-of-way is needed? Is it not possible to just widen to the median instead?

Community impacts, such as right-of-way impacts and property owner relocations, are considered as a part of the NEPA process. The conceptual alignments for potential future improvements, including proposed right-of-way, can be viewed on this mapping tool:

https://cdmsmith.maps.arcgis.com/apps/MapSeries/index.html?appid=fe86d08aec6948a2a171fd3c695 0b413

The public and potentially impacted communities will be engaged throughout the NEPA process to gather input on the proposed project alternatives. SCDOT will work to minimize impacts to adjacent homes and businesses as the designs are developed.

We do include options that widen to the middle. However, in all cases, some amount of widening is still needed to the outside.

8. When will the right-of-way acquisition process begin? What if equivalently priced housing is not available?

The official right-of-way acquisition process does not typically start until the NEPA process is completed and a NEPA decision has been issued by the Federal Highway Administration (FHWA), who oversees the project. When projects are funded from the PEL Study, then schedules will be developed and provided to the community. If a build alternative were selected, SCDOT would develop the final right-of-way plans for the project. Once right-of-way plans are finalized, the plans would be provided to the SCDOT right-of-way agents and acquisition activities would begin in the steps outlined below.

SCDOT follows the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended. On highway projects in South Carolina that require relocations, SCDOT makes a survey of the residential households to be relocated and the available housing in the area. The right-of-way agent informs you in writing of the specific comparable replacement housing, the sales prices or rent used as the basis for establishing the upper limit of the replacement housing payment, and the basis for that determination. If the comparable replacement housing available on the market is priced higher (property appraised value or rent), the homeowner may be eligible for supplemental benefits for a period of time to cover this price differential, including increased mortgage interest costs and eligible incidental expenses (such as closing costs).

For more information on the right-of-way process, visit the SCDOT website: https://www.scdot.org/business/pdf/rightofway/Relocation.pdf.

9. What happens next after the PEL study?

The PEL study provides a collection of possible projects and estimated costs for consideration as part of SCDOT's future statewide transportation plans. Recommendations are also available for other project partners to consider for implementation in local efforts. If and when projects are funded, they would advance to the environmental phase, NEPA. During that process, the range of alternatives would be further refined and narrowed down to a recommended preferred alternative based on additional studies, engineering design, and public input. This is when noise and right-of-way impacts will be analyzed in detail. View the Next Steps: https://www.526lowcountrycorridor.com/wp-content/uploads/2021/09/Next-Steps.pdf

10. Will we get to see the PEL study in detail once it's published?

Yes, the PEL study will include a final report and will be made available on the project website in Spring 2022.

11. Which other types of concepts were evaluated that didn't involve widening or building a new road?

The project team looked at and continues to evaluate a series of strategies that focus on operational improvements without the need for expansion, known as Transportation Systems Management and Operations (TSMO). Because of the physical constraints of the existing bridges, shoulders, and roadway, it would not be possible to retrofit the corridor with enough TSMO strategies to fully address the capacity needs of the corridor. While TSMO strategies would not provide enough lane capacity improvement or improvement to travel time reliability to work as stand-alone alternatives, they could help achieve an acceptable level of improvement in operations in combination with future widening. We will continue to evaluate these options moving forward and look for ways that they can be included as part of an expansion project. Learn More: https://www.526lowcountrycorridor.com/wp-content/uploads/2021/10/Transportation-Systems-Management-and-Operations-Options-2.pdf

12. Are truck-only lanes being evaluated as part of the I-526 LCC EAST?

Adding a travel lane for trucks only was evaluated as a Transportation Systems Management and Operations (TSMO) strategy. To evaluate the potential performance of TSMO strategies at this planning-level analysis, a combination of the I-26 Corridor Management Plan and other case studies were used to report on the anticipated benefit of these strategies. The project team found that a dedicated truck lane would not meet the purpose and need of this corridor without regional implementation, and therefore, was not carried forward as a reasonable alternative. Should regional efforts make dedicated truck lanes a priority, this action would be incorporated into NEPA studies. Restricting trucks to the right-most lane remains an option.

13. How do you determine the height of the Don Holt and Wando bridges?

The height of the proposed bridges would be established in coordination with the U.S. Coast Guard during the federal environmental (NEPA) process and would include a navigational study of the channel. During the navigation study, navigational activities supported by the waterways surrounding the proposed project would be identified through vessel traffic data and waterway stakeholder surveys. The navigation study would help identify potential navigational impacts of the proposed project to determine the appropriate vertical and horizontal bridge clearances. If there are users of the waterway with a need for a higher vertical clearance, that would be taken into consideration during the navigational study. The displayed height of 65' for the Wando bridges during the 2021 public information meeting is the minimum height allowed by the U.S. Coast Guard and was used for conceptual purposes. However, the actual proposed height of the bridge would be determined by the U.S. Coast Guard during the NEPA process. Our intent in showing a lowered height for the Wando and a raised height for the Don Holt at this meeting was to get feedback from those who regularly use the waterway. Additional feedback from marinas and other commercial and recreational users would be sought in the future during a navigational study to provide a more complete picture of the actual uses of the waterways.

14. Can't SCDOT just restripe the lanes over the Don Holt and Wando bridges and mainline to widen to three lanes?

SCDOT studied options to restripe I-526, but a safety analysis predicted an increase in crashes due to the loss of existing shoulders. Why are shoulders important for your safety? Shoulders allow drivers to pull out of traffic more safely after crashes or breakdowns and provide an area for drivers to move to avoid crashes or recover control of their vehicle.

15. Are any new alternatives being proposed as a result of public comments from the 2021 public meetings?

Public and stakeholder comments on the reasonable alternatives indicated a desire to look at ways to reduce impacts to the residential areas north of I-526 between the Wando River and Long Point Road. Alternative 3 included the replacement and symmetrical expansion for both the Don Holt bridge and the Wando bridges in order to create a consistent tie into the I-526 Lowcountry Corridor WEST (LCC WEST) project which includes symmetrical widening. In addition, Alternative 3 would accommodate maintenance of traffic on the corridor during the construction process as the current facility would stay in use throughout the construction process.

This alternative was eliminated because it had the largest right-of-way footprint, resulting in the greatest number of community and natural resource impacts in addition to the impact of an African-American cemetery.

Alternative 3A was subsequently developed to reduce the size of the footprint between the Wando River and Long Point Road. This alternative would replace the Wando River bridges in stages by first constructing two new parallel two-lane bridges, then removing the existing bridges and widening the newly built bridges to four lanes. This modified alternative would retain the compatible connection with the I-526 LCC WEST project while reducing the project footprint resulting in fewer impacts to the community and natural environment as compared to Alternative 3.

Subject: I-526 Lowcountry Corridor – Stakeholder Meeting

<u>Date/Time</u>: May 24th, 2017 / 1:00 p.m. & 4:00 p.m.

Place: Charleston Metro Chamber of Commerce Board Room

1:00 PM Meeting

General Comments:

What about bike/ped options for transit options?

Observations have been made in other cities (Miami / San Francisco) that HOV lanes are underutilized

Concerns about HOV are most motorists are only going 2-3 exits and merging to get over to exit from HOV lane

One solution to be considered is how to clear accidents/stalled vehicles quicker so traffic does not back up.

Any consideration to truck-only lanes?

What are the conversations with the PORT? Inland Ports and multi-modal yards do not remove trucks from 526.

Table 1

Attendees: CCPRC, City of Charleston, FHWA, Katie & Jamie

Feedback:

- HOV + BRT should work together
- Include facilities for bikes
 - o Foresight for bike/pedestrian accommodations
- BRT is advantageous / critical considering future development areas
 - o Bike/pedestrian is equally as important
- Make sure there is fluidity between all phases of the project
 - o Study all segments when looking at managed lanes as a realistic option
 - o Make all data available when working on other segments of the project
- Make sure there is enough ROW and shoulders along entire corridor
 - Dedicated funding
 - o Replace and widen bridges to accommodate shoulders
 - o Need to maintain shoulders on these bridges for stalled vehicles
- Group unanimously in favor of HOV/HOT lane for the I-526/I-25 system
- Look at land-use change
 - o Practical multi-modal usage
 - o Incentivize
 - Education

- Really missing the mark if we don't take the opportunity to fully address TDM and modal issues with this project
 - o Not just one answer, different solutions should work together

Table 2

Attendees: Steve – Federal Aviation Administration (FAA), Jose – FAA, John – FAA, Wes – Boeing **Feedback:**

Thoughts on Travel Demand Management (TDM) Strategies:

- Would embrace telecommuting as an employee
- Boeing has 1st, 2nd, & 3rd shifts
- Boeing used to stagger start times, but this created a problem with employees showing up late for work and using the staggered start times as an excuse
- Can't control hours of other companies
- Some company operations can't accommodate flex time
- Flex time more limited to big companies
- People's residences are spread out in Charleston region, so carpooling can be difficult

Thoughts on Bus Rapid Transit (BRT):

- People would rather drive their own car
- You lose independency and don't have as much control over your schedule
- There's going to be a learning curve to change perceptions and attitudes to transit.
 Charleston isn't set up like other large cities
- Should look at the possibility of light rail and converting abandoned rail lines to light rail

Thoughts on HOV & HOT Lanes:

- Great idea if space and money allows for it
- Is it possible to open up the HOV lane for use during incident management when there is an accident in the general purpose lanes?
- There could be a public outcry if HOT lanes are implemented after gas tax was just increased
- HOV lanes are preferred over HOT lanes. Probably would not pay for the HOT lanes.

Table 3

Attendees: Keith Johnson – H and J Trucking, DJ Mayer – Southeastern Freightlines, Coleman Thompson – Hunter Transportation, Pat Barber – Superior Transportation, Charleston Drayton – City of North Charleston Planning

Feedback:

Traffic Demand Management

- Seen as a low cost alternative to alleviating some of the traffic
- With Boeing and MUSC already shifting work schedules it is questionable how much more benefit can be gained through this TDM strategy unless many other small business' get involved.
- School schedules and bus behavior seen as a big component of traffic issues in region.
 Question asked if can shift school schedules away from heavy traffic times and alter bus behaviors such as pull outs for bus stops or have bus stops in neighborhoods rather than on busy arterials such as Dorchester road.
 - o Incentivize students to ride bus rather than drive with nicer buses
 - Restrict # of students allowed to drive to a school
 - o Quality of drivers is a factor as well
 - o Major remanagement of school bus system is needed
- Better connections on surface streets or new ones to keep traffic of 526 mainline would help
- Tourists not knowing roadways hurt the efficiency of the area network as well
- Need a bypass from 526 WB to 26 WB to keep them out of interchange
- Get port more involved with their data and projections to assist in the planning and design of 526 improvements

Table 4

Attendees: Andy Egan (Stantec), Scott Baker (Stantec), Richard Turner (Charleston County Gov't), Bob Nagy (Ashley Harbor resident), Marvin Kirkland (Ashley Harbor resident).

Feedback:

The group discussed the merits of traffic demand management strategies but ultimately agreed these options would not be very effective in the Charleston region.

Bob remarked on his experiences with HOV lanes and rapid transit solutions in San Francisco and Miami. He noted that HOV lanes are present in many locations but are often underutilized throughout the day and therefore are not an effective solution. He mentioned that the Bay Area Rapid Transit (BART) is successful due to higher density—people can take the rapid option for the first leg of their trip and then take another local transit option or walk or bike to their ultimate destination. Bob suggested that having more connecting transit options would be key to successful rapid transit in the Charleston region because the urban area here is less dense.

Richard stated West Ashley/James Island/Johns Island are more commuter areas and having a HOV/HOT lane would make sense to get to large employers in North Charleston. Richard preferred a high occupancy toll (HOT) lane over an HOV lane because he could use the managed lane as a single rider. He suggested that detailed origin-destination studies are needed to determine if long-distance application of rapid transit or managed lanes would be successful on the overall I-26 & I-526 systems.

The group discussed the difficulty of making several lane changes in order to exit the interstate from a managed lane and how this maneuver would adversely impact the general purpose lanes. There was also some concern about BRT vehicles making the lane changes from the HOV/HOT lane to exit.

Table 5

Attendees: Kristi Tolley – Citadel Mall, Jason Crowley – Coastal Conservation League, Jeff Burns – CARTA, Ian Scott – Chamber of Commerce

Feedback:

- Boeing, Mall hours currently use flexible hours
- Mall currently serves as CARTA park and ride
- Table thinks all ideas should remain on the table to work with employees
- Incentives should be provided for TDM strategies
- More education should be provided for CARTA's "Emergency Ride Home" program. This might help with people being willing to use TDM.
- Buses do not currently use I-52 because of reliability
- HOT lanes keep incentives for buses
- HOT lanes good for a region not just an individual corridor
- Need to work on incident management
- Full side shoulders are needed for disabled vehicles with enforcement to prevent unauthorized users from using it as a travel lane
- A robust traffic management center (TMC), similar to Jacksonville, FL, for multiple agencies would help for quicker and more appropriate responses to incidents.

MEETING SUMMARY

4:00 PM MEETING

Feedback:

How many lanes can we add within the corridor total?

Are there other arteries we can improve to take volume off 526?

Do not like the idea of BRT if a lot of stops along the way – won't make it worth the trouble, need an express bus

Don't see carpool working because of lack of density in region currently.

When asked if they thought managed lanes would work with 4 lanes in each direction -

- There will need to be enforcement
- HOV system would need to be system wide
- Trucks seen as a big problem on 526, can we make it a truck exclusive lane when not an HOV lane, or use it as an alternative route for trucks to port facilities when not HOV times.

Park and ride facilities seem to work good within city of North Charleston, can we incorporate more into the regions network?

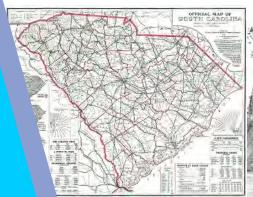

When asked if they thought managed lanes would be a good option for the region and if they would work for this corridor the group of 7 responded with 6 yes's and 1 no.

- They would like to see exits at all interchanges from the HOV lanes

Transit Oriented Development (TOD) would be ideal for this area and could link up to BRT system but BRT would need to be on time and frequent in order to promote use.

- Managed Lane Strategies

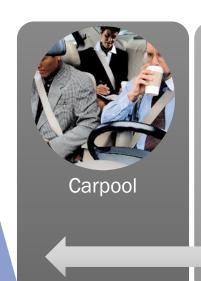

Travel Demand Management Strategies

I-526 Lowcountry Corridor Phase I

Travel Demand Management: Reducing traffic demand or shifting the demand from peak hours

Travel Demand Strategies

I-526 Lowcountry Corridor Phase I

TDM Analysis Conclusion:

- Potential to reduce travel by 5-10%
- Not large enough to mitigate future traffic congestion
- SCDOT funding TDM efforts through BCDCOG

I-526 Lowcountry Corridor Phase I

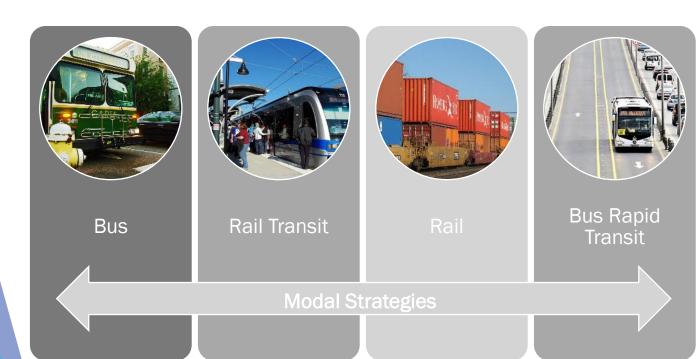

- Ridesharing
- Transit
- Vanpooling

I-526 Lowcountry Corridor Phase I

Modal Strategies: Potential to reduce traffic through transit or reduce traffic through rail or other modes of travel

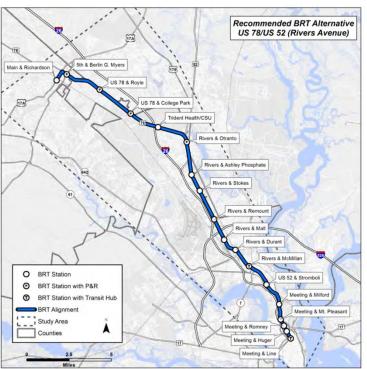

I-526 Lowcountry Corridor Phase I

Modal Analysis Conclusion:

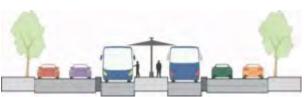

- Potential to reduce travel by 5-10%
- Not a large enough reduction to mitigate future traffic congestion
- BCDCOG is pursuing Bus Rapid Transit (BRT)

BCDCOG Bus Rapid Transit (BRT)

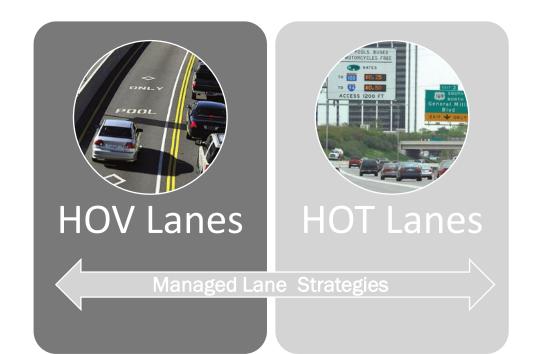

https://bcdcog.com/brt

I-526 Lowcountry Corridor Phase I

Managed Lane Strategies: Consider developing High Occupancy Vehicle (HOV) Lanes to encourage carpooling and transit. A variation could be High Occupancy/Toll (HOT) Lanes, where non HOVs can use the lane if a toll is paid.

I-526 Lowcountry Corridor Phase I

	HOV Lanes
Definition	Only vehicles with 2 or more people in one carpooling, or transit vehicles allowed in the lane
Purpose	Maximize the number of people traveling in a lane, while promoting carpooling and transit

I-526 Lowcountry Corridor Phase I

	HOT Lanes
Definition	HOV lanes that also allow lower occupancy vehicles to use lane by paying toll
Purpose	Optimize lane utilization by 'selling' the extra capacity not being used by carpools and transit vehicles to lower occupancy vehicles

I-526 Lowcountry Corridor Phase I

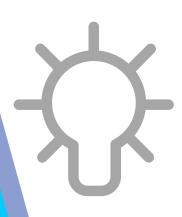

Managed Lane Analysis Conclusion:

- Traffic demand will require at least one additional general purpose lane in each direction.
- May want to consider the second lane in each direction to be a managed lane.

Table Discussion

Let us know your IDEAS!

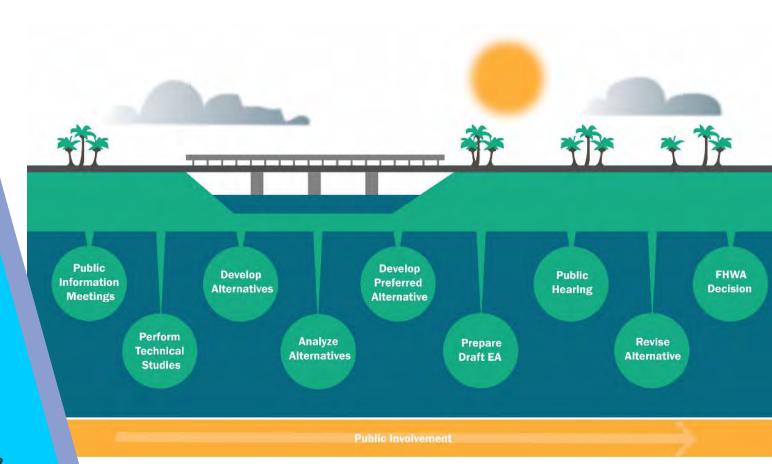

- 1. What Travel Demand strategies do you prefer for your employer/employees?
- 2. What are your thoughts about Bus Rapid Transit?
- 3. Are you familiar with HOV/HOT lanes? Will they work in Charleston?

Meeting Objective: Provide an update to the I-526 LCC stakeholders regarding the WEST and EAST projects and re-engage them in the process

Item/Presenter:

- 1. Welcome
- 2. Presentation
 - a. Update on West
 - i. Where we've been
 - 1. Update of project termini and Purpose & Need
 - 2. Traffic modeling updates
 - 3. Rebranding; Overview of new website point out useful tools like E+C map
 - ii. Where we're going
 - 1. Review of new schedule and key milestone timelines
 - a. Change from EA to EIS
 - b. Overview of One Federal Decision
 - 2. Provide date for next stakeholder meeting
 - b. Update on EAST
 - i. Where we've been
 - 1. Surveys, Traffic, Environmental, PIP
 - ii. Where we're going
 - 1. Discussion of possible PEL vs. EA?
 - 2. Combined public involvement effort (EAST & WEST)
 - a. Take recommendations on locations for community pop-ups and/or local events we should attend
 - c. Update on I-26 Corridor Management Study (update regarding previous conversations RE managed lanes)
 - d. Questions/Contact
- 3. Closing

Questions

- Do you have a sense of trip origination and destination data for users on I-526?
 - The model does have origin and destination patterns within it. The last tool we developed is a micro simulation model which has an original destination model within it. It tells us where people are going and coming. Part of the logic in extending the project to Virginia Avenue was because there were so many trips between I-26 and Virginia Avenue.
 - In terms of raw data that is the modeling tool used. It's calibrated and validated using blue tooth data for users along I-526 and I-26. That data was collected for the whole region so we understand the regional patterns, as well.
- EAST Bridges Don Holt and the Wando: What is the thought process behind adding lanes (widening), adding a new bridge (parallel structure), or completely replacing these?
 - We are looking at multiple options; that is ongoing now. We will look at canopy widening as
 well as parallel structures. It is kind of a cost-benefit exercise because the structures do have
 some age on them. We will also look at completely replacing these bridges. Our goal is to
 figure out what will give SCDOT and the community the best long-term benefit.

- WEST Bridges Glad to see that Virginia Avenue was added as there is a lot of congestion. This
 used to be just the Westbound side, but it is equally bad now in both directions. In the past,
 there has been a proposal to start the lane shift on the Don Holt bridge so there is not this
 swerve and safety issue. Is that still part of the project?
 - A lot of concepts are looking at that theory. There is so much interaction between I-526 and I-26. A lot of the alternatives look at channelizing that volume into a CD lane (collector distributor) with no egress/ingress. (Response: That's fabulous, no problem with that)
- WEST Are there any design strategies for moving airport's main entrance from International to Montague?
 - That is a Charleston County project, the Airport Access Road. We are working closely with them on that. That project is being more driven by the airport and Boeing decisions. For our part, we have looked at both scenarios to make sure the traffic works with our alternatives. We will go whichever way we have to, to work with that project.
- Is the origin/destination data used publicly available?
 - Currently, this data is owned and maintained by the BCDCOG. Any of this data, we either get from them or give back to them (if we see adjustments needed). They work diligently to ensure their model includes updated information that may not have originally been part of their model when it was developed. As such, we have done a lot of work to ensure we are using the same model, or as close as we can, across both the WEST and EAST so that the numbers are consistent and we are designing based on the same set of assumptions.
- With the Rivers Ave Connector: given the current railroad tracks on Rivers Avenue just off of the exit, is an overpass optional?
 - That is a little outside of the purview of this projected. However, with the Bus Rapid Transit project being developed there, that might be a big consideration for them.
- Is a Bike/Pedestrian facility over the Ashley River still being considered?
 - We looked at this type of facility, priced it and went through what it might look like. There are some segments in the bike ped plan. It is a significant cost difference to add that onto that bridge. The challenge is that there is a certain amount of money and a lot that needs to be done. We would absolutely ensure that everything we do does not preclude the addition of a bike/pedestrian facility in the future, if it is not included. Such a facility would probably require a local municipality to spearhead that and to maintain it. We are not equipped to maintain those types of facilities. It will have a better chance if the locals came together to sponsor this. The price tag is high. We will have all that outlined in the stuff we present in the fall. This is a newer concept other states have done but it has traditionally been something we have steered away from because you do not want bicyclists and pedestrians on a high-speed facility. However, you can do it safely. However, widening this bridge so vehicles can get through the corridor would already have a lot of impacts. Adding something like this on will increase the required project footprint (and therefore would likely be more impactful). It is hard to show people they will lose their homes, and now we're going to take out another row of homes to add bike and pedestrian lanes. This is a challenge here because this study area is so heavily developed.
- The need for this project is underreported. There are plenty of people complaining about traffic but no one is talking about this project and the fact that we're only talking about a finite pot of money.

- We have \$1.6 billion committed and we can get a lot done with that. We know we will need additional funding. We will likely need the feasibility done on the EAST side so that we can show the needs by segment so that funds can be identified. We will also look at other options that are not as popular such as self-funded tolling. My job is to present all the options, popular or not, to let the leaders make a decision. If we went to a tolling facility, the representatives would be the decision makers on that. However, we will explore all options.
- Is that allocation for both the WEST and EAST or just the WEST?
- Will this be the biggest project the state has ever done?
 - It could be. From a construction standpoint, however, this will likely be separate projects. It may end up being four smaller projects, or something like that. We are watching Carolina Crossroads and the bidding process to see if they can get a successful contract at over a billion dollars. Based on what is happening in the marketplace, and what the original feedback has been, it would likely be broken up as a sum that large could be more than any company could get the funding capacity on. We will do what is the most beneficial to get the best price while also being able to manage and implement the projects while also keeping the traffic flowing and safe.
- Is the funding (\$1.6 billion) strictly for the WEST?
 - No. The money is set aside for this corridor and could be used on the EAST. For instance, if we wanted to do something early, like an interim project. There is a lot going on with truck lanes. However, at this time, I wanted to wait on the safety analysis first before really disicussing this. We do not want to give anybody false hopes, and there is a lot that we would have to do to ensure we feel comfortable from a safety perspective. While the budgets are pretty interchangeable, if the system-to-system improvements are estimated to cost the full amount, then the funds will all go there.

Comments Received On-Site

- I look forward to seeing all of the options and alternatives for the West side. Thank you for keeping us all up to date, hosting these meetings and answering questions.
- Improvement of interchange at I-526/I-26 are essential; the new Website will be a big asset in assisting public to understand project; Great to see collaboration with the BCDCOG to assist and coordinate the many projects that will be going on; Want to make sure SCPA is included in shareholder meeting on I-526 LCC EAST

North Rhett Avenue/I-526 Alternatives Concerns

Volume of trucks required to go through **North Rhett** Avenue instead of directly onto **I-526**

Infrastructure
investments by
Joint Base
Charleston to
redirect truck
traffic to
Virginia
Avenue

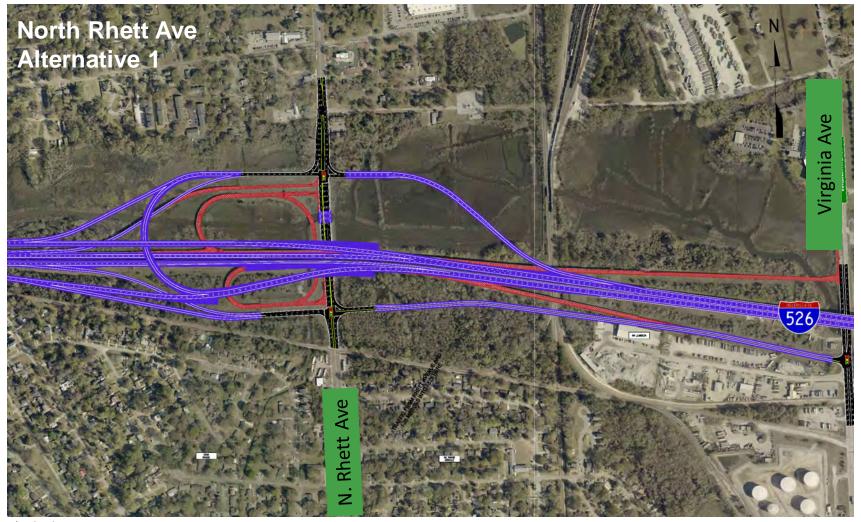

Potential growth at the North Charleston Port Terminal

Reasonable Alternatives

North Rhett Avenue/I-526

North Rhett Ave Alternative 1

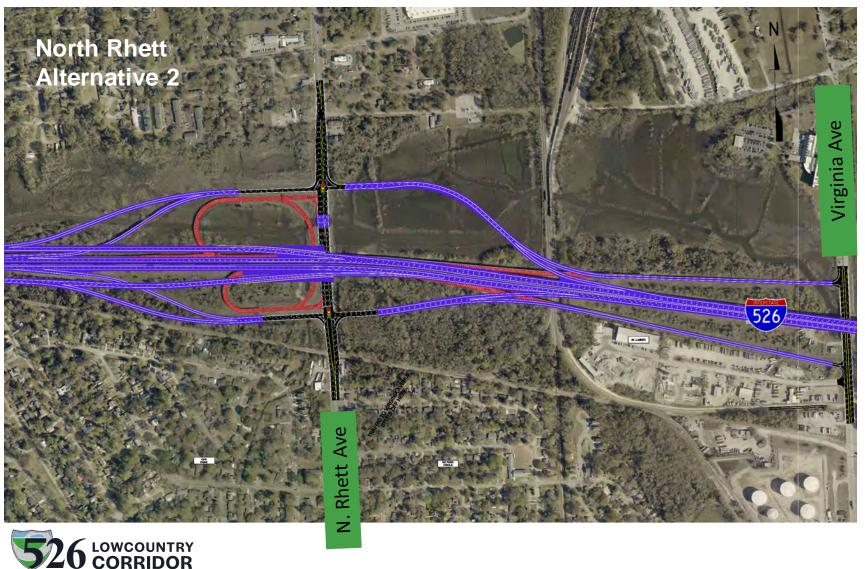

- Provides access from one intersection on N Rhett Ave to Eastbound & Westbound I-526
- Provides separate, 2-way frontage road between N Rhett & Virginia Avenues
- Exit ramps from Eastbound & Westbound I-526 terminate at intersections on the south & north sides

Reasonable Alternatives

North Rhett Avenue/I-526

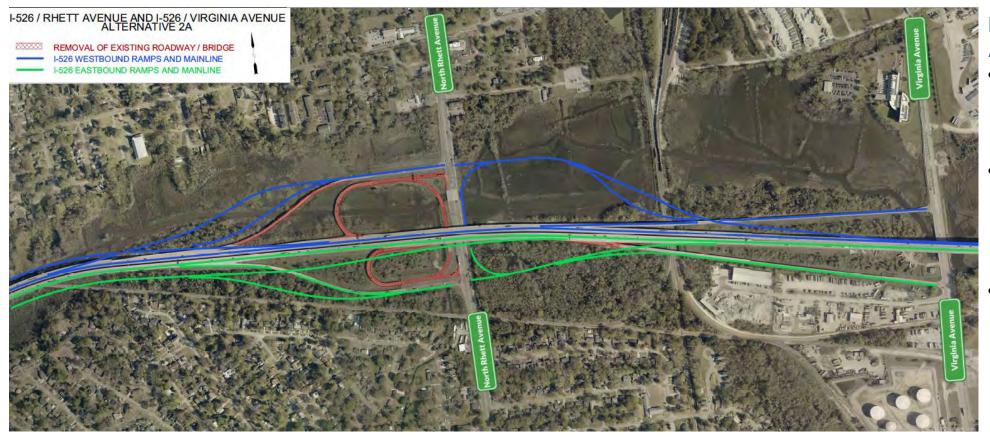

North Rhett Ave Alternative 2

- Entrance ramps begin at separate intersections for eastbound & Westbound I-526
- Provides separate, 1-way frontage roads on either side of I-526 connecting N Rhett Ave to Virginia Ave
- Exit ramps from Eastbound & Westbound I-526 terminate at intersections on the south and north sides of I-526

Addressing Concerns

North Rhett Avenue/I-526 Alternatives – New Alternatives

North Rhett Ave Alternative 2A

- Restores direct access from Virginia to I-526 Westbound
- Streamlines access from Virginia to I-526 Eastbound by adding Texas U-turn
- Vehicles travelling
 I-526 Eastbound &
 Westbound go through
 N Rhett Intersection to access Virginia Ave

Addressing Concerns

North Rhett Avenue/I-526 Alternatives – New Alternatives

North Rhett Ave Alternative 5

- Direct access ramps provided from/to I-526 & I-26 provided to/from N Rhett Ave and Virginia Ave
- Merge from I-26 EB C-D and diverge to I-26 WB C-D both occur just west of Virginia Ave
- Traffic from Virginia
 Ave to I-526 EB and
 from I-526 WB to
 Virginia Ave do not
 mix on U-turn under
 I-526

Addressing Concerns

North Rhett Avenue/I-526 Alternatives – New Alternatives

North Rhett Ave Alternative 6

- Direct access ramps provided from/to I-526 and I-26 provided to/from N Rhett Ave & Virginia Ave
- Merge from I-26 EB C-D & diverge to I-26
 WB C-D both occur just west of N Rhett Ave
- Traffic from Virginia
 Avenue to I-526
 Eastbound & from I-526 Westbound to
 Virginia Ave weave
 through U-turn under

Community Advisory Council (CAC)

- First Meeting: September 30, 2019
- Monthly ongoing meetings
- Once the project mitigation reaches the implementation phase, the CAC will transition into a Project Oversight Committee

Advise

Help transportation agencies create effective mitigation measures that will benefit your neighborhood

Connect

Share your knowledge, experiences and perspectives

Represent

Your input gives your community a strong voice

Communicate

Help get the word out about public meetings and other project-related information

What is a Community Advisory Council (CAC)?

"A collection of individuals who bring unique knowledge and skills which augment the knowledge and skills of the formal project team in order to more effectively guide the organization."

Why develop a CAC?

- Provide a way for citizens to voice their opinions, feelings, and ideas
- Help shape this project and create a positive, local impact
- Provide input on actions to minimize and mitigate impacts
- Build relationships
- Convey ownership
- Meaningful engagement

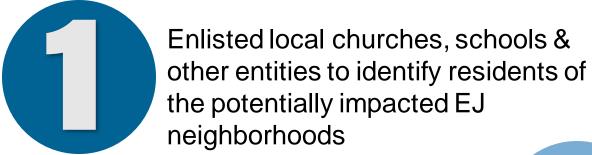

"Cities have the capability of providing something for everyone, only because, and only when, they are created by everybody."

- Jane Jacobs

How was the CAC Selected?

Contacted visitors from the I-526 LCC Community Office from the potentially impacted EJ neighborhoods

Contacted candidates individually through phone calls to gauge interest & availability

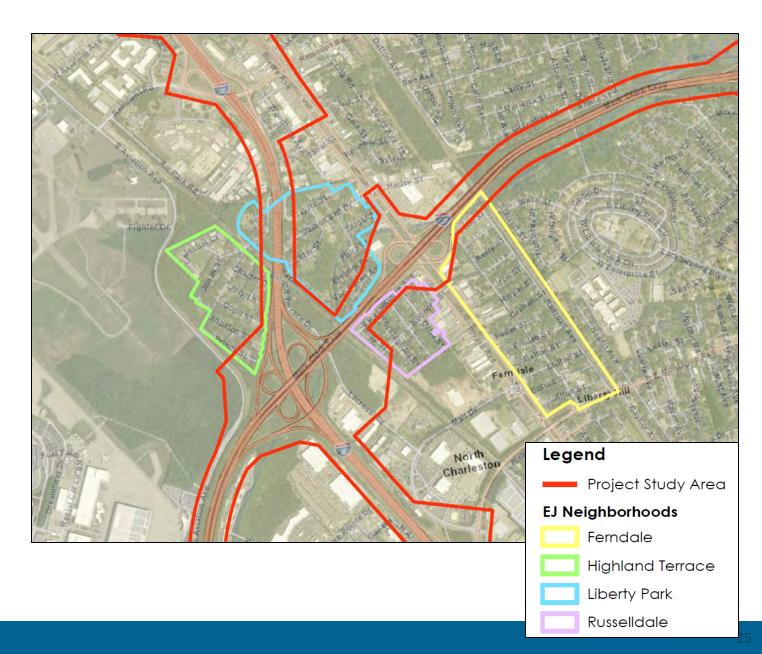

Who is on the CAC?

Residents, business owners, property owners, proxies for elderly family members & local religious leaders from:

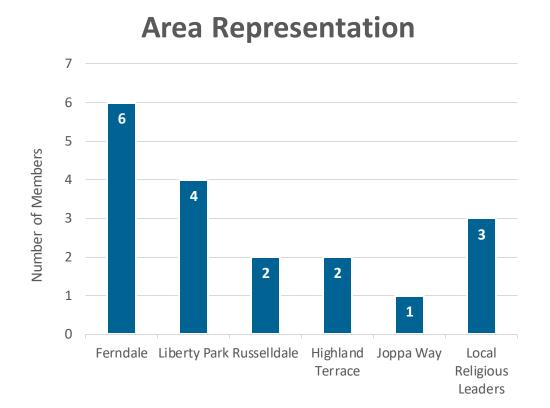

- Russelldale
- Liberty Park
- Highland Terrance
- Ferndale

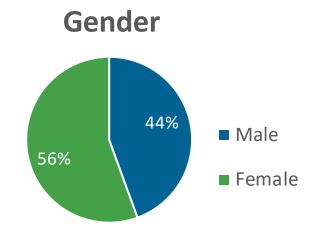

Various ages, backgrounds, and demographics to represent each neighborhood's history & future goals

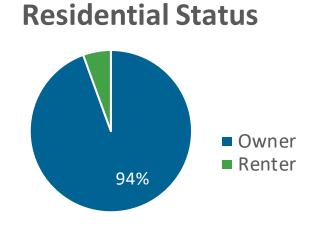

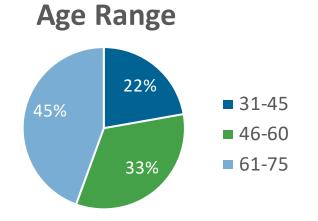

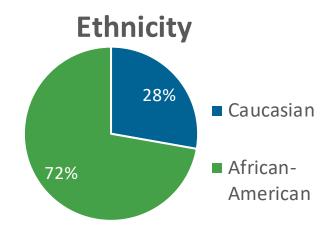

CAC Demographics as of June 2020

Public Involvement Opportunities

We want your input!

Short survey to capture corridor usage, concerns and priorities for the corridor

March 17– August 15, 2020

526lowcountrycorridor.com

Virtual Meeting

All materials available online

July 15 – August 15, 2020

526lowcountrycorridor.com

What we are hearing from the survey so far...

Most people are using the corridor daily for:

work, shopping, entertainment, & recreation

Travelers are experiencing congestion during morning & afternoon/evening commutes

Most people travel the corridor using their personal vehicle

Travelers are experiencing these top safety-related issues:

Truck Merging

Aggressive/ Distracted Drivers

Speeding

Most people want to see these improvements along the corridor:

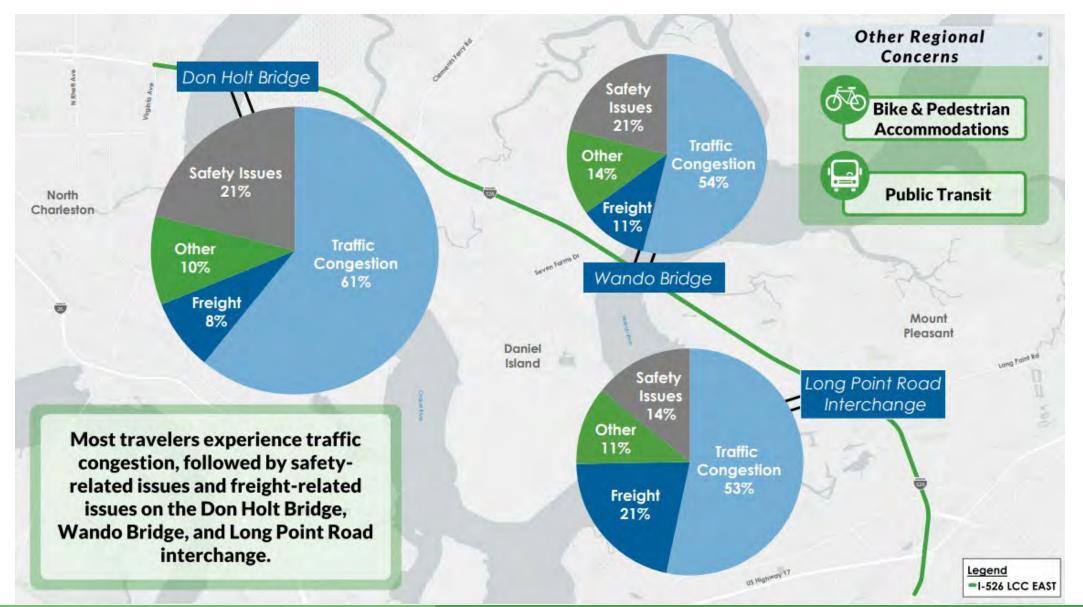

High Occupancy Vehicle (HOV)

Carpool Lanes

What we are hearing from the survey so far...

What we are hearing from the survey so far...

How should we address problems or issues experienced on the corridor?

Most people are choosing these four solutions from eight possible categories:

Roadway/ Bridge Design

Add more travel lanes, improve the existing corridor alignment and clearances, increase corridor lifespan, and design for extreme weather events

Safety

Widen shoulders to get emergency vehicles to crashes quicker and space to pull vehicles off of the road to keep traffic moving; Provide enhanced lighting and real-time travel information via improved dynamic messaging

Traffic Operations

Maximize existing capacity by improving pavement markings, enhanced signage, incident and work zone management

Freight Connectivity

Improve truck freight connections to nearby ports and rail facilities, implement rush-hour incentives/disincentives, increase availability of truck parking

Meeting Objectives:

- Provide an update to the I-526 LCC stakeholders regarding the WEST project:
 - Provide a deeper dive into the proposed reasonable alternatives and what they can expect to learn at the Public Information meeting
 - o Encourage them to invite their constituents/stakeholders to the public meeting
- Provide an update to the I-526 LCC stakeholders regarding the EAST project schedule and draft purpose and need

Agenda:

- 1. Welcome
- 2. Presentation
 - a. Update on I-526 LCC WEST
 - i. Project Background
 - ii. Where we've been
 - 1. Alternatives Evaluation Funnel
 - 2. Traffic Analysis
 - 3. Deeper dive into the Alternatives
 - 4. Community Impacts & SCDOT's plan to develop mitigation plan
 - iii. What's going on/Where we're going with Public Involvement
 - 1. New office, hotline, upcoming meetings; recent community meetings
 - b. Update on I-526 LCC EAST
 - i. Where we've been
 - 1. Overview of Planning & Environment Linkages (PEL) Study Process
 - 2. Surveys, Bridges, Traffic, Environmental
 - ii. Where we're going
 - 1. Brief highlights
 - c. Questions/Contact
- 3. Closing

Questions:

- 1. Does SCDOT have a plan to move the widening out of the predominately African American communities?
 - a. SCDOT has looked at many alternatives to widening the interstate, including alternative modes of transportation and alternative routes.
- 2. Are you evaluating the cost-benefit considering the number of people who are in these affected communities who do not have cars?
 - a. The community impact assessment will look at the costs associated with that. We will also look at other ways to mitigate impacts. That could include enhancements to transit. Looking at how communities were previously bisected, there may be a need to make better connections across communities such as roadways and pathways. It will be up to the community to tell us what would help mitigate.
 - b. There is always a no-build alternative.
- 3. Why is there always a disproportionate impact to African American communities? There is not enough black representation from the communities being impacted. How is right-of-way (ROW) acquisition handled?
 - a. A discussion was had regarding the ROW process and rights of both property owners and renters. One key takeaway is that the SCDOT ROW process is not based solely on the value of the home, but it is based on the costs of the relocation. SCDOT has also opened a community office near the impacted communities in order to enhance engagement with the impacted communities. SCDOT has also formed a Community

- Advisory Council comprised of impacted community residents in order to engage the community in the project decision making process.
- 4. Along with the Bus Rapid Transit (BRT), how does this impact our communities?
 - a. SCDOT is closely coordinating with the BRT project as their route will come right under I-526. Whatever we do on the I-526 LCC project should enhance what they're doing with the BRT project.
- 5. Has the traffic generation been broken down further into numbers of families or individuals impacted? As part of that impact statement, are you quantifying market loss due to loss of productivity?
 - a. The traffic studies do account for those users of the roadways including businesses and commuters in order to account for the travel demands. However, this may not be broken down into explicit numbers of families or individuals, it is broken down into daily users of the roadway.
- 6. Would Glenn McConnel be staged earlier in the process?
 - a. SCDOT has set some priorities and will set others as we go. The project will be phased. The top priority for the project is the I-526/I-26 interchange because it effects the entire corridor and widening outside of that will not help unless this interchange has first been improved.
- 7. How have the Community Advisory Council (CAC) members been selected?
 - a. CAC members must live within the impacted community. The CAC was formed by reaching out to community leaders, such as those found in the local churches, to identify and reach out to the people who live in those communities. SCDOT is still open to accepting members, therefore, if you know people, let us know. We want it to be representative of people in the communities.
- 8. How do we know what a renter's entitlement is?
 - a. Every situation is unique. We advise those who think they may be impacted to come to the Community Office and speak one-on-one with a Right-of-Way expert. SCDOT wants to ensure people are informed about their rights and eligibility so they do not get taken advantage of.
- 9. Within the 31 communities that would be impacted, the City of North Charleston rezoned all the properties that were zoned commercial or multifamily that was owned by African Americans. Now, SCDOT purchases the property at a lesser value. That sucks \$3 million out of the African American community. Some were not rezoned. Unfortunately, those are owned by whites. How will SCDOT rectify those who have been rezoned so that they get enough to stay in the City?
 - a. Through the appraisal process, we can take any information into consideration that the property owner provides.

November 19, 2019 Stakeholder Meeting Joy Riley, PE, DBIA SCDOT

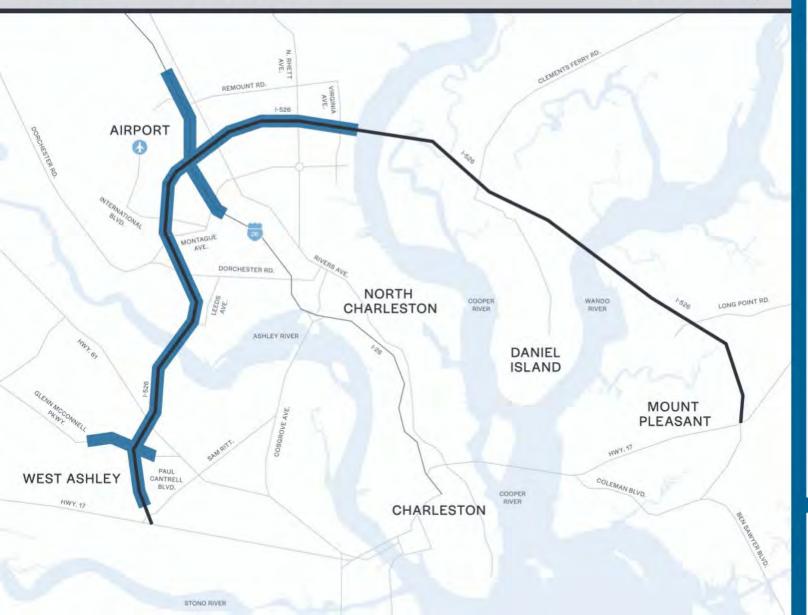

Project Background

I-526 Lowcountry Corridor WEST

Project Termini

Virginia Avenue
North Charleston

Paul Cantrell Boulevard West Ashley

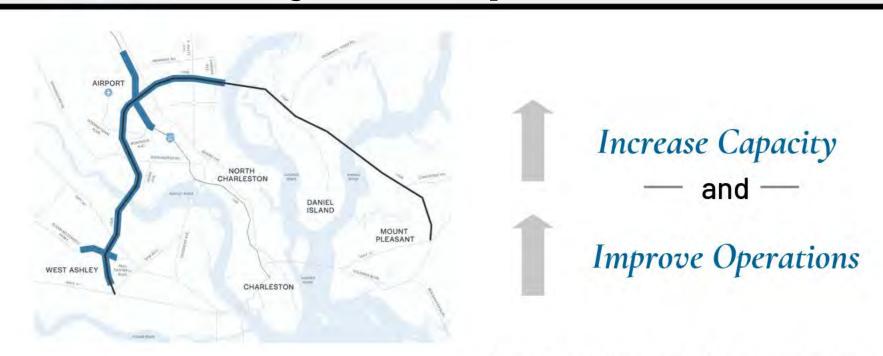

Project Purpose

What is the reason for this project?

at the I-26/I-526 interchange and along the I-526 mainline from Virginia Avenue to Paul Cantrell Boulevard

Project Need: Why?

I-526 is one of South Carolina's most congested interstate segments

Congestion

#2: 2035 CHATS LRTP

#6: SCDOT Interstate Capacity List

Top 20 most congested interstate

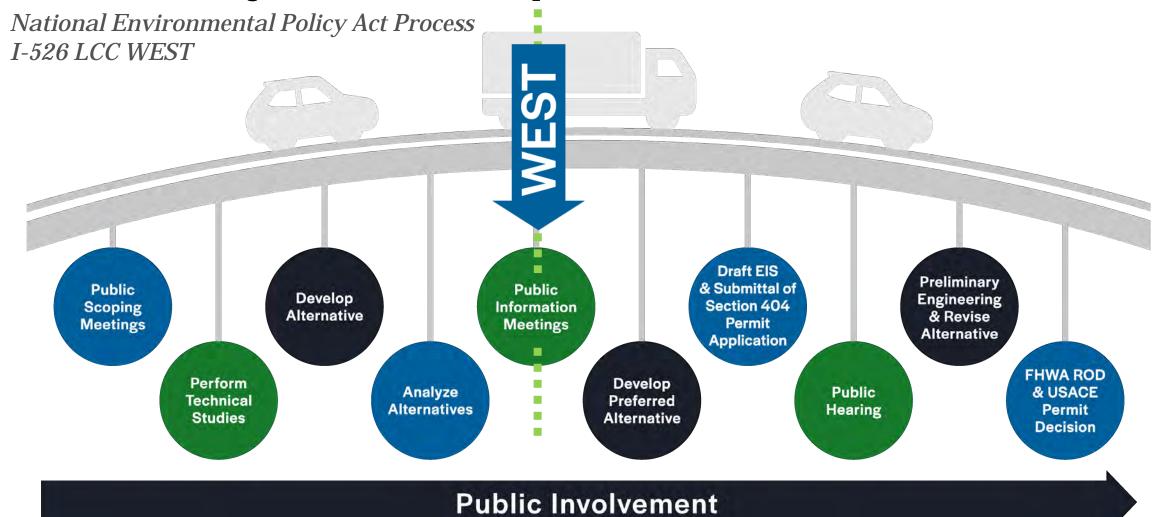

segments (SCDOT 2014 Multimodal

Transportation Plan)

NEPA Project Development Process

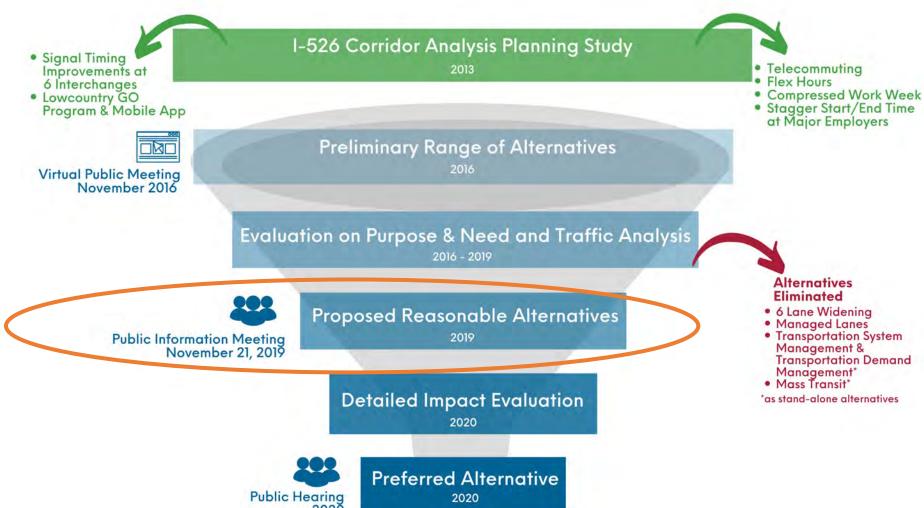

Alternatives Evaluation

Alternatives Evaluation Process

Eliminated Alternatives: A Deeper Dive

No-Build Options

- 6 Lane Widening
- Managed Lanes
- Transportation System Management & **Transportation Demand** Management*
- Mass Transit*

*as stand-alone alternatives

Travel Demand Management (TDM) & Modal Strategies + Traffic Reduction Potentials

Carpools/ Rideshare Matching Vanpools

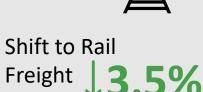

Work Flex Time/ Staggered **Work Hours**

Bike/ Walk **10.1% Enhancements**

Promotion

Education/ 1% Bus Rapid 13.4% **Transit**

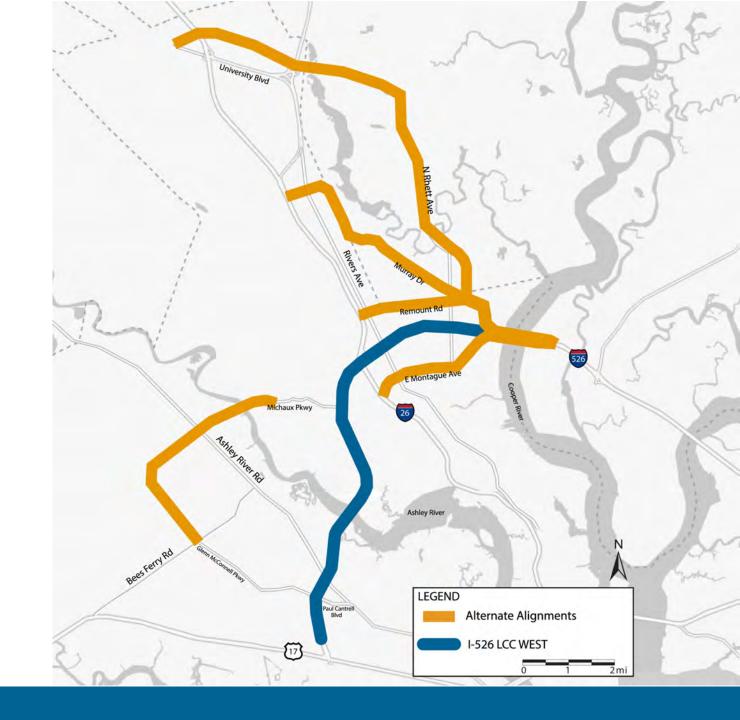

Other Alternatives Evaluated

Alternate Alignments

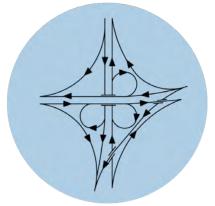

- New alignments or Widened existing Corridors
- Did not alleviate congestion on the I-526 LCC Corridor enough

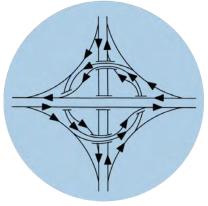

Other Alternatives Evaluated

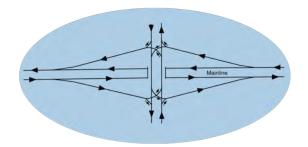

Interchange Types

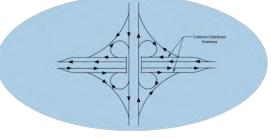

DIRECTIONAL INTERCHANGE
WITH DIRECT AND SEMIDIRECT CONNECTIONS
AND LOOP RAMPS

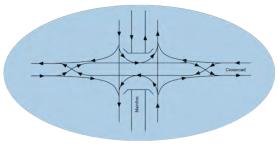

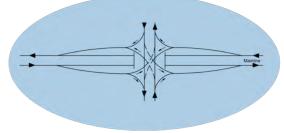

DIAMOND INTERCHANGE
LOWCOUNTRY
CORRIDOR

CLOVERLEAF INTERCHANGE WITH COLLECTOR-DISTRIBUTOR ROADWAYS

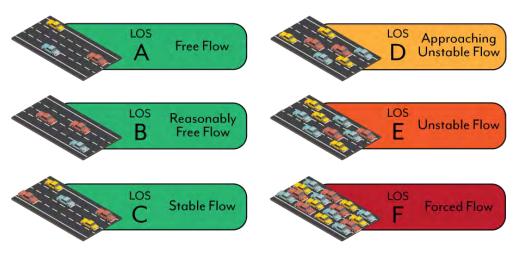

DIVERGING DIAMOND INTERCHANGE

Understanding Level of Service

Level of Service (LOS)

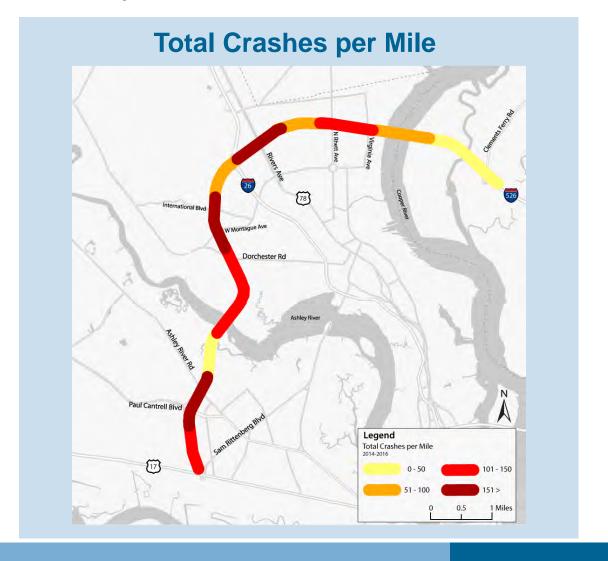

8-Lane Alternative was selected as the Proposed Reasonable Alternative for the Mainline

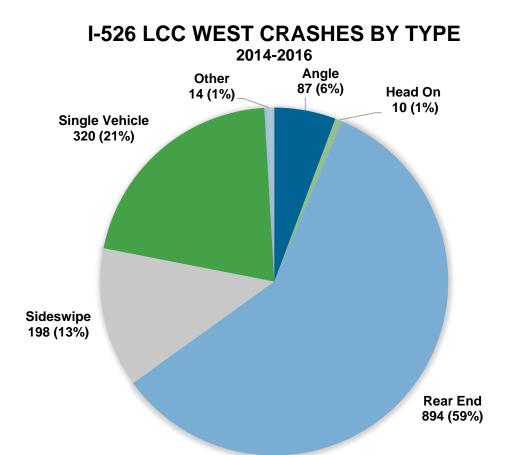

Sogmont Description	2015 Annual	No Build 2050 AADT	Level of Service (LOS)	Build 2050 AADT	LOS	
Segment Description	Average Daily Traffic (AADT)				6-Lane	3-Lan€
North of Sam Rittenberg Blvd to Paul Cantrell Blvd	39,400	59,800	С	68,500	В	В
Paul Cantrell Blvd to Leeds Ave	79,200	106,900	F	136,900	F	D
Leeds Ave to Dorchester Rd	78,800	106,400	F	134,000	F	D
Dorchester Rd to Montague Ave	80,700	108,900	F	127,300	E	С
Montague Ave to International Blvd	67,400	91,000	F	109,600	D	С
International Blvd to I-26	89,000	120,200	F	126,700	Е	С
I-26 to Rivers Ave	77,200	104,200	F	116,100	D	С
Rivers Ave to North Rhett Ave	75,600	104,400	F	126,700	E	С
North Rhett Ave to Virginia Ave	80,500	122,200	F	148,400	F	D
East of Virginia Ave	68,900	110,100	F	133,800	F	D

Safety Considerations

Roadway Typical Alignments

Mainline Interstate I-526

Mainline widening of the Eastbound and Westbound bridges over the Ashley River

Existing elevated structure between I-26& Virginia Ave will remain

 Elevated 2-lane collector distributor road will be added in both directions with direct connections to I-26

LOWCOUNTRY

Roadway Typical Alignments

Mainline Interstate I-26: Remount Rd to I-26/I-526

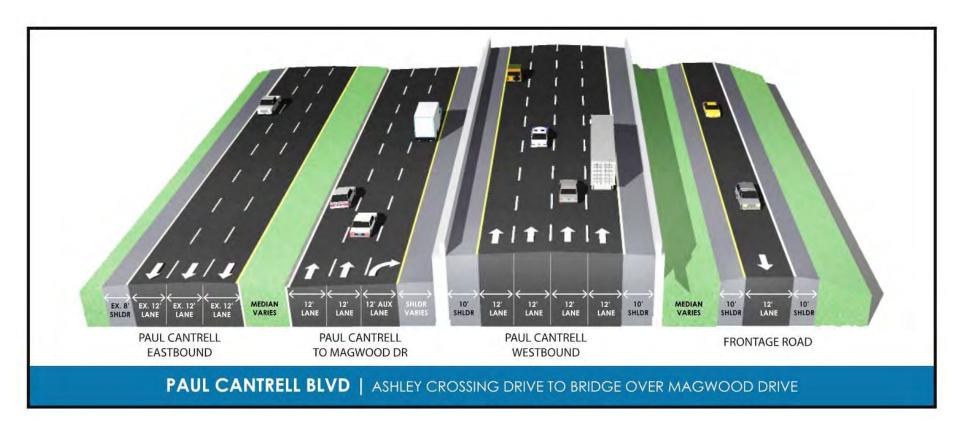

- Existing 10-lane
 section of I-26 from
 Remount Road to the
 I-526 interchange
- 3-lane collector distributor roadways on either side

Roadway Typical Alignments

Paul Cantrell Blvd

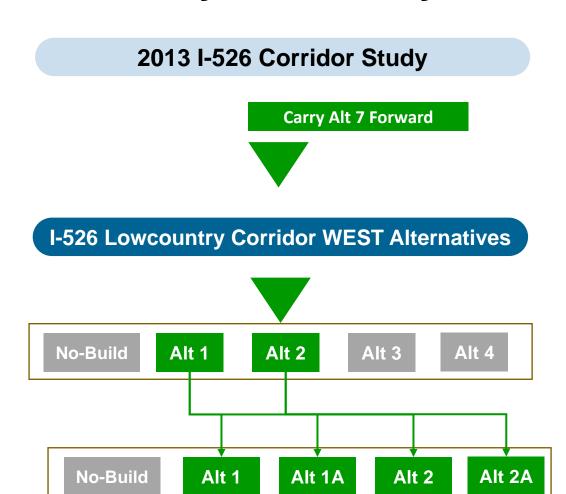

Left to Right:

- Existing Eastbound & Westbound Paul
 Cantrell Blvd
- The new bridge heading Westbound over Magwood Drive
- The frontage road will remain for local traffic

I-26/I-526 System-to-System Interchange Alternatives

Highlights:

- 4 Preliminary Alternatives carried forward from the 2013 Corridor Study Alternatives, with updated traffic forecasts
- All produce an acceptable level of service
- Alternatives 1 and 2 = Comparable impacts
- Alternative 3: Eliminated because of significant impacts to US
 Government and Airport flight pathways
- Alternative 4: 3-Level interchange Eliminated because of significantly higher costs and constructability challenges with no added benefit over Alternatives 1 and 2

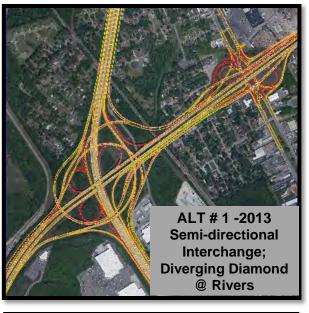

Proposed Reasonable Alternatives:

- No-Build, Alternatives 1 and 2 will be carried forward in the NEPA Alternatives Analysis.
- Each has 1 Variant:
 - 1. Alt 1 and 2 **No added ramps** at Rivers Avenue to maintain direct access to I-26
 - 2. Alt 1A and 2A **New ramps** maintaining direct access to I-26 at Rivers Avenue (as it is today)

2013 I-526 Corridor Study Preliminary Alternatives

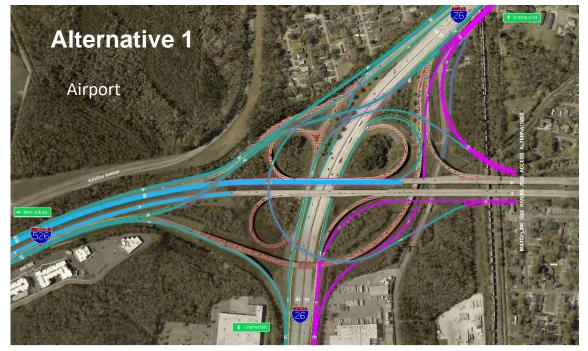

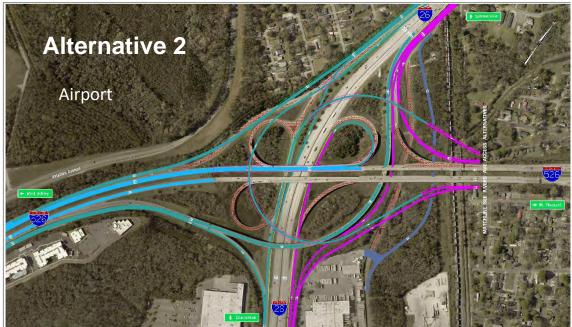

Recommended Alternative Carried Forward

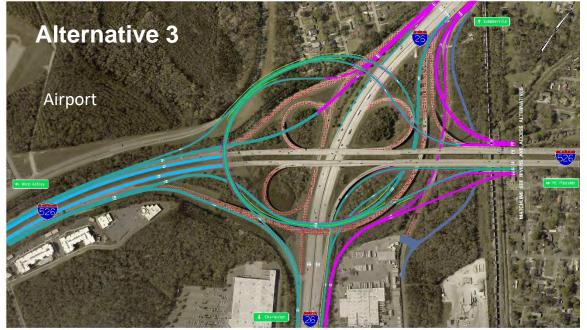

I-526 Lowcountry Corridor WEST Preliminary Alternatives

I-526 WEST LCC Alternative 1 – *Semi-Directional Interchange*

- Similar to Alternative 4 from 2013 Corridor Study
- Collector Distributor roads added to north and south side of I-526 through Rivers Ave interchange
- Westbound I-526 to westbound I-26 uses existing directional ramp
- Eastbound I-526 to westbound I-26 directional ramp moved to cross over I-26 north of I-526

I-526 WEST LCC Alternative 2 – Semi-Directional Interchange with 1 Loop Ramp Retained

- Similar to Alternative 4 from 2013 Corridor Study
- Collector Distributor roads added to north and south side of I-526 through Rivers Ave interchange
- Westbound I-526 to westbound I-26 uses existing directional ramp

I-526 Lowcountry Corridor WEST Preliminary Alternatives

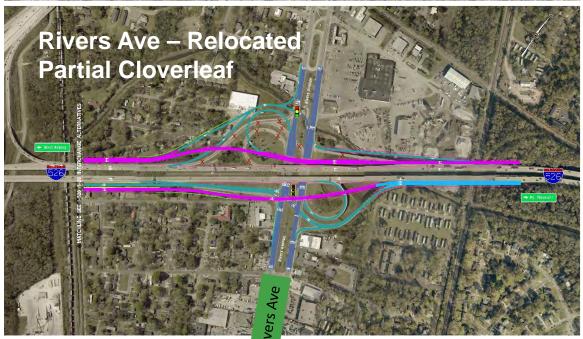

I-526 WEST LCC Alternative 3 – Semi-Directional Turbine Interchange

- Alternative 7 from 2013 Corridor Study
- Eastbound I-526 auxiliary lanes between International Boulevard and I-26 replaced with braided ramps

I-526 WEST LCC Alternative 4 – Semi-Directional with 3 Levels of Ramping

- Similar to I-526 LCC WEST Alternative 2
- Westbound I-26 to westbound I-526 loop ramp replaced with a directional ramp, creating a 3-levelhigh interchange

I-526 Lowcountry Corridor WEST Preliminary Alternatives

Rivers Ave Interchange Alternatives - Basic Build

- New I-526 Collector Distributor system is constructed over the existing Rivers Ave interchange
- Direct Access from Rivers to I-26 via I-526 is removed; drivers will now access I-26 from the I-26 @ Remount Interchange to the north or at I-26 at Montague to the south

Rivers Ave Interchange Alternatives – *Relocated Partial Cloverleaf*

- New CD system over Rivers Ave
- Additional ramps constructed between Rivers and Collector Distributor system to maintain access to I-26 via I-526 from Rivers Ave

Alternative 1 Airport Walmart / Tanger

I-526 LCC WEST Reasonable Alternatives

Alternative 1 Semi-Directional Interchange with Advance EB I-526 to WB I-26 Flyover Ramp

- New CD system over Rivers Ave
- Access maintained to existing lanes I-526
- Access between Rivers Ave and I-26 via I-526 removed
- I-26 WB to Remount Rd and Aviation Ave utilizes a portion of the existing directional ramp

Alternative 2 Semi-Directional Interchange

- Similar to Alternative 1
- Utilizes existing directional ramp for eastbound I-526 to westbound I-26

Alternative 2A Semi-Directional Interchange

- Similar to Alternative 2 with the same interchange design at I-526/I-26
- Alterations at Rivers Ave to add ramps to allow access to I-26 from Rivers Ave via I-526

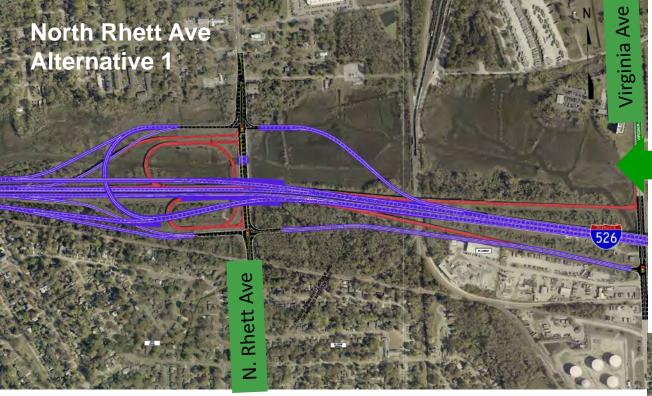

I-526 LCC WEST Reasonable Alternatives

Alternative 1A Semi-Directional Interchange with Advance EB I-526 to WB I-26 Flyover Ramp

- Similar to Alternative 1 with the same interchange design at I-526/I-26
- Alterations at River Ave to add ramps to allow access to I-26 from Rivers Ave via I-526

North Rhett Ave Alternative 2

- Entrance ramps begin at separate intersections for eastbound & Westbound I-526
- Provides separate, 1-way frontage roads on either side of I-526 connecting N Rhett Ave to Virginia Ave
- Exit ramps from Eastbound & Westbound I-526 terminate at intersections on the south and north sides of I-526

I-526 LCC WEST Reasonable Alternatives

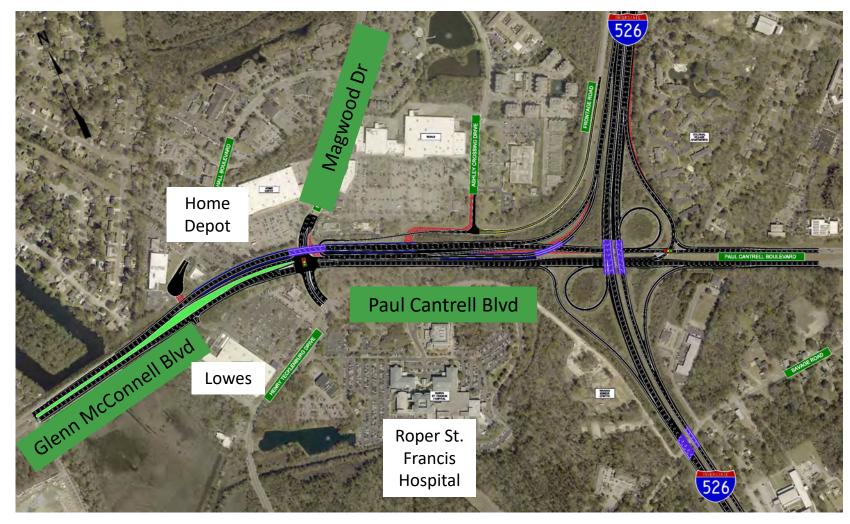

North Rhett Ave Alternative 1

- Provides access from one intersection on N. Rhett Ave to Eastbound & Westbound I-526
- Provides separate, 2-way frontage road between N Rhett & Virginia Avenues
- Exit ramps from Eastbound & Westbound I-526 terminate at intersections on the south & north sides

I-526 LCC WEST / Paul Cantrell Blvd Reasonable Alternative

- New bridge will carry the Westbound lanes of Paul Cantrell Blvd over the intersection with Magwood Dr
- Westbound exit ramp from I-526 to
 Westbound Paul Cantrell Blvd will be widened and utilize this new bridge to
 bypass the Magwood intersection

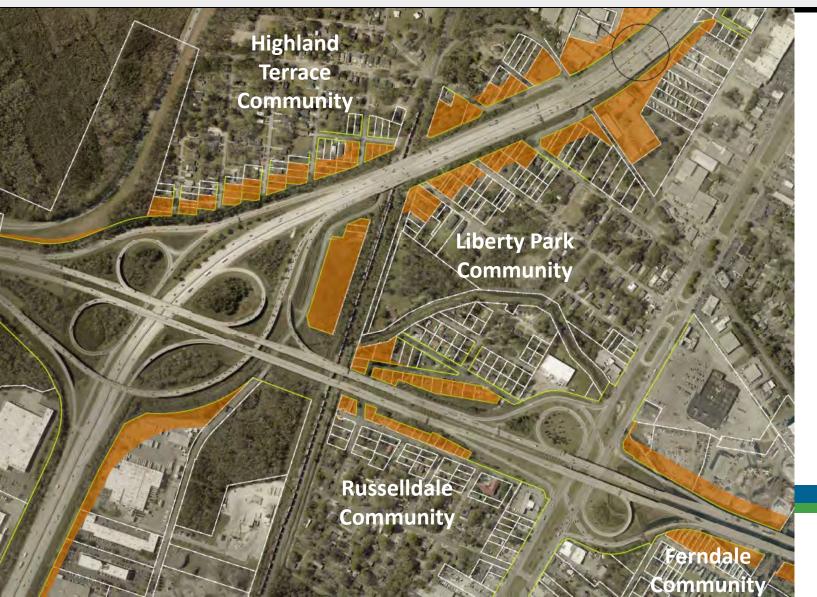

Community Impacts & Public Involvement

Environmental Justice Significant Community Impacts

Right of Way RELOCATION IMPACTS	I-526 WEST Project EJ Impacts	I-526 WEST Project TOTAL
Apartment Units (16 Buildings/Duplexes)	68	68-90
Single Family Homes / Mobile Homes	44	48-67
Parks / Community Centers	2	2
TOTALS	114	159

72% of impacts on 12 miles is in this 1 mile

Environmental Justice

The fair treatment and meaningful involvement of all people **regardless of race**, **color**, **national origin**, **or income** with respect to the development, implementation and enforcement of environmental laws, regulations and policies

MEANINGFUL ENGAGEMENT

Decision-makers seek out and facilitate the involvement of potentially affected communities so they can participate in the process, help identify community concerns, and influence decisions about activities that may affect their environment and health

Environmental justice is achieved when environmental hazards, investments, and benefits are distributed equally without direct or indirect discrimination and when access to information and participation in the decision-making process is available to all.

Meaningful Engagement

Opportunity to
Participate in agency

decision-making

Ability to

Influence agency decision-making

Concerns

Of community members are taken seriously

Early & Consistent

Engagement with affected communities

Accessibility

Language and facility accessibility

Public

Is educated about potential impacts of agency decisions

Varied

Meeting styles and types of communication

Committees

Form committees composed of members of affected communities (Community Advisory Council)

Community Mitigation Plan

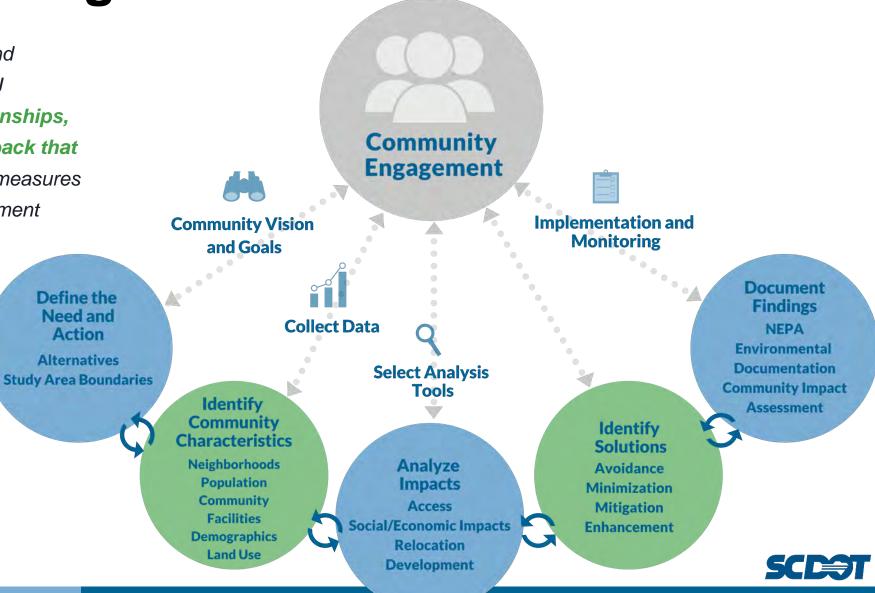

Define the

Need and

Action

Alternatives

Effectively mitigate direct, indirect, and cumulative (/recurring) impacts on EJ communities by establishing relationships, building trust, and gathering feedback that will inform decisions on mitigative measures and other aspects of project development

Community Mitigation Strategies Under Development

Community Office with Outreach Specialists

Community Advisory Council to help assess impacts and drive mitigation planning

Early Right-of-Way phase to identify or create Affordable Housing

Develop Construction Program for Replacement Homes in Community

Community Advisory Council

- First Meeting: September 30, 2019
- Meet approximately monthly
- Members must be residents within the potentially impacted communities

Advise

Help transportation agencies create effective mitigation measures that will benefit your neighborhood

Connect

Share your knowledge, experiences and perspectives

Represent

Your input gives your community a strong voice

Communicate

Help get the word out about public meetings and other project-related information

2019 - 2020 Outreach

To-Date

- Pop-Up Informational Booths at businesses and festivals
- Project Information Boxes
- Updated Website
- Newsletter
- Postcards
- Door Hangers
- Stakeholder Meetings
- Community Advisory Council

Meeting Summary

STAKEHOLDER MEETING

Date: July 13, 2020 **Time:** 10 am - 11:30am

Location: Virtual Teams Meeting

Attendees:

Name	Affiliation	
Penny Benton	Tanger Outlets	
Tom Leonard	Leonard Strategic Advantage	
Hampton Lee	SCPA	
Elizabeth W. Heatley	Code Lynx	
Betsy La Force	CCL	
Christie Rainwater	City of Hanahan	
Smith	Charleston County	
Kathryn Basha	BCDCOG	
Robert Robbins	Thurmond Kirchner & Timbes,	
	P.A.	
Tommy Ballas	Wando Crossing	
Perrin Lawson	Bureau	
Katie Zimmerman	Charleston Moves	
Dan Moses	Mead Hunt	
Savannah Brennan	Charleston Moves	
Melvin Williams	S&ME	
Omar Muhammad	LAMC	
Frank Lapsley	North Charleston Coliseum	
Richard Turner	Charleston County	
Brent Jonas	CRDA	
Randall "Keith" Benjamin	City of Charleston	
Kaylan Koszela	Rep. Joe Cunningham	
Scott A. Benedict		
Juergen Goehner	Zeltiwanger	
Emily Lawton	FHWA	
Shane Belcher	FHWA	
Pam Foster	FHWA	
Yolanda Jordan	FHWA	

Meeting Objectives:

- Provide an update to the I-526 LCC stakeholders regarding the WEST project:
 - o Results of fall public involvement efforts
 - o Refinements to alternatives
 - o Community Advisory Council

- Provide an update to the I-526 LCC stakeholders regarding the EAST project:
 - O Upcoming public meeting materials: What is a Planning & Environmental Linkages (PEL) Study? How does it fit into the project development process? What might traffic look like in 2050 if no improvements were made?

Agenda:

- 1. Welcome
- 2. Presentation
 - a. Update on I-526 LCC WEST
 - i. Project Background
 - ii. Public Involvement
 - iii. Community Mitigation
 - b. Update on I-526 LCC EAST
 - i. Overview of Planning & Environment Linkages (PEL) Study Process
 - ii. Preview of East Public Meeting Materials
 - 1. Brief highlights
 - 2. Traffic and Safety Analysis
 - c. Questions/Contact
- 3. Closing

Questions:

- 1. Are there plans to construct the I-26/I-526 interchange prior to widening?
 - a. Yes, this is our number 1 priority
 - b. However, it does depend on the procurement process because contractors do not like these multibillion dollar projects we have to break up the cost
 - i. System-to-System interchange could be hard to get under a billion dollars
 - ii. It will be a little while because we have to see what the economy is doing
- 2. Can you speak about multi-modal access since that was a priority from the comments received during the I-526 LCC WEST Fall Public Involvement efforts?
 - a. Multi-modal access is very important to SCDOT we cannot widen our way out of traffic
 - b. We will see what can fit on the urban corridor to encourage multi-modal
 - c. We are being purposeful (setting 12-foot shoulders) to incorporate space for multimodal strategies in the future
 - d. Many of the multimodal strategies are not compatible with the existing infrastructure, so a widening may be needed in order to get the type of infrastructure out there that will accommodate those types of alternative solutions
- 3. Can we be emailed a summary from the peer exchange?
 - a. Absolutely, we have a report with the information and links.
- 4. Do you think seismic retrofitting of the bridge foundation is a possibility?
 - a. We look at a variety of options if we replace the bridge, then it will be the best level of performance; with a seismic retrofit, you will likely upgrade to a "No-Collapse" option

- b. Widening (by adding new, seismic structures) can provide a critical access pathway in the case of an event since the bridge is a lifeline for emergencies and services; the costs and benefits must be weighed for all the options
- 5. Is the presentation available on website or being emailed out to participants?
 - a. Yes, absolutely. It will be on the website and we will provide it to participants in an email.
- 6. Is the Lowcountry Rapid Bus Transit being implemented on the East Corridor into Mount Pleasant?
 - a. We have monthly meetings with the LCRT project team because we want to ensure our projects complement each other
 - b. Our goal is to set up a project that is flexible in the future
 - c. We will continue to monitor the timeline and studies from their project so ensure if the opportunity/need comes to incorporate it, then we can do that
- 7. How will this project monitor air quality impacts within the project footprint? Also, how will the project monitor air quality after the completion of the project?
 - a. An air quality study was part of draft EIS to look at air quality now and in the future
- 8. Will your NEPA analysis include a Health Impact Assessment to evaluate social determinants of health and the cumulative impacts of this project?
 - a. The Draft EIS will include a summary of the air quality analysis as well as potential indirect and cumulative impacts to the communities/neighborhoods in the vicinity of the project.

Meeting Summary

STAKEHOLDER MEETING

Date: November 10, 2020 **Time:** 8:30 am – 10:00 am

Location: Virtual Teams Meeting

Attendees:

Name	Affiliation	
Kevin Shealy	Charleston City Council District 2	
Barbara Melvin	SC Ports Authority	
Emily Lawton	FHWA	
Steve Thigpen	Charleston County?	
Pam Foster	FHWA	
Brent Jonas	CRDA	
D. Brice Urquhart	Davis & Floyd	
Melvin Williams	S&ME/ Charleston Chamber of Commerce Executive Board	
Scott Barhight	Charleston Metro Chamber of Commerce	
Keith	Unknown	
Katie Zimmerman	Charleston Moves	
Brad Morrison	Town of Mount Pleasant	
Yolanda Jordan	FHWA	
George Ramsey	Charleston Metro Chamber of Commerce	
Jonathan Dawley	Kion Group	
Juergen Goehner	Zeltwanger	

Meeting Objectives:

- WEST Project Updates
 - o Preview of the Public Hearing materials and Recommended Preferred Alternative
 - DRAFT Community Mitigation Plan, new Community Commitments website, Introduction of the Community Forum
 - Ways to engage with the project team, view the Draft Environmental Impact Statement, submit comments
- EAST Study Updates
 - Overview of the responses from the public information meeting held this summer and next steps

Agenda:

- 1. Welcome
- 2. Presentation
 - a. Update on I-526 LCC WEST
 - i. Overview of Public Hearing engagement opportunities
 - Full video was played of the fly through of the recommended preferred alternative and additional Public Hearing materials were shown, such as traffic analysis
 - iii. Community mitigation overview, including what we are hearing from the public through the community survey
 - b. Update on I-526 LCC EAST
 - i. What we heard from the public information meeting and virtual survey held this summer
 - ii. Next steps include identifying the reasonable alternatives and presenting those to the public at a public information meeting this spring
 - c. Questions/Contact
- 3. Closing

Questions:

- 1. What is the cost of the recommended preferred alternative?
 - a. Currently, the project is estimated to be 1.5 billion dollars. We will do an intense financial plan moving forward. Right-of-Way is the biggest constraint in doing that planning.
- 2. Please speak to managed lanes vs general use intent lanes
 - a. The current configuration shows all general use lanes. However, there are 12-foot shoulders on either side that would allow for the future deployment of ITS such as managed lanes. The regional managed lanes study that was conducted showed that in order for a managed lanes system to work, it would need to be regional linking from I-26 and I-526 since those are the predominant movements.
- 3. Can you talk about the pedestrian river crossings?
 - a. The Secretary has committed to providing the width needed on the river crossings on both the WEST and EAST sides. SCDOT would provide the width needed on the bridges and local entities would be responsible for providing the connections.
- 4. Where can I find the most up to date schedule, considering delays in right of way?
 - a. The schedule will be included in all public hearing materials and shown later in this slideshow.
- 5. How do we know who is serving on the CAC?
 - a. There is a list of the members on the Community Commitments webpage: https://www.526lowcountrycorridor.com/west/community-commitments/

To provide a common vision & sense of belonging for residents who may have been divided

Enhancement

To increase the value, quality & attractiveness of a community by providing aesthetic improvements & replacing lost recreational amenities

Preservation

To connect the neighborhood's past, present, & future to encourage residents of all ages to thrive despite relocation impacts

Revitalization

To restore employment opportunities, safety, & affordable housing that has been diminished

What is a Community Mitigation Plan?

The overarching goal of the I-526 Lowcountry Corridor WEST Community Mitigation Plan is to effectively mitigate project impacts in partnership with residents of the Ferndale, Russelldale, Highland Terrace, Liberty Park neighborhoods.

How is the I-526 LCC WEST Community Mitigation Plan Developed?

By identifying & considering the social needs & priorities of neighborhood residents.

Community Office

In November 2019, a Community Office was opened in close proximity to the potentially impacted communities. Located in Gas Light Square at 5627 Rivers Avenue (CARTA Route 10), the Community Office is where you can meet one-on-one with the project team and connect with resource specialists such as right-of-way relocation experts.

Community Advisory Council (CAC)

A Community Advisory Council (CAC) was formed as a resident-led group to facilitate meaningful engagement between residents and SCDOT.

Social Needs Assessment

Communicate

The CAC and residents of the potentially impacted neighborhoods completed a Social Needs Assessment survey to provide insight into the daily operations, needs, and desires of the community.

Survey Highlights

Information presented represents the online data received as of 11/5/20

What Are the Priorities?

Each of the following items were ranked in the top 5 priorities the most frequently:

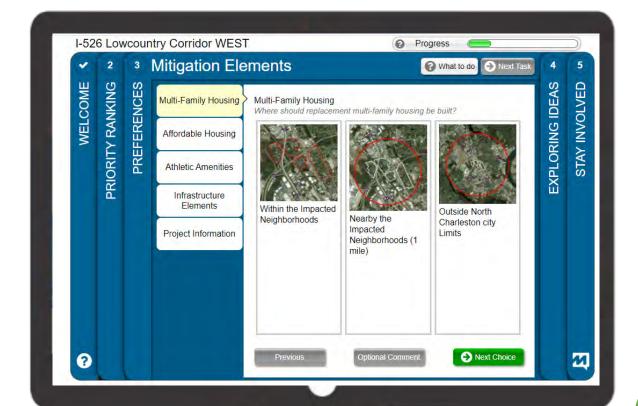

- Affordable Housing (48/48)
- Recreational Facilities (45/48)
- Recreational Programs (44/48)
- Educational Counseling (33/48)
- Pedestrian Safety Plan (32/48)

Survey Highlights

Information presented represents the online data received as of 11/5/20

Preferences on Mitigation

- 83% prefer affordable housing to be nearby or within the impacted neighborhoods
- 52% prefer a single-family type of affordable housing
- 55% prefer a baseball field for recreation
- 33% prefer improvements to sidewalk curb and gutter
- 65% prefer to receive project updates via email

Survey Highlights

Information presented represents the online data received as of 11/5/20

Mitigation Ideas with the Highest Rating in each Category

- Community Center Amenity: Walking/Biking Trails
- Community Center Class (tie):
 Financial Literacy Class
 - Health and Wellness Class
- Community Signage:
 Path Finding Signs
- Community Center Program:
 Afterschool Program

Survey Highlights

Information presented represents the online data received as of 11/5/20

Survey Demographics

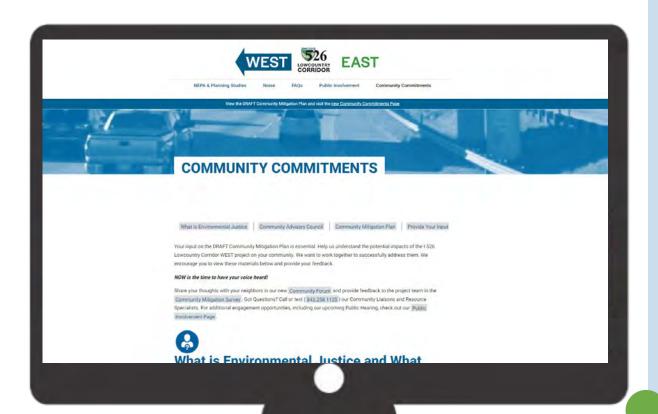

- 46% of respondents listed "Black or African American" as their ethnicity. 41% listed "White".
- 67% of respondents live within the impacted EJ communities.
- 51% of surveys were completed via the mail-in paper option and added to the online results by the project team.

Survey participation is anticipated to increase after the EJ Community Drop-In Meetings (Early November)

Captured corridor usage, concerns & priorities for the corridor

May 14 – August 15, 2020

Survey Live:
May 14 - August 15, 2020

Ton Comments & Co

3,103 Responses

Top Comments & Concerns:

Most people are using the corridor daily for:

work, shopping, entertainment, & recreation

Travelers are experiencing congestion during morning & afternoon/evening commutes

Most people travel the corridor using their personal vehicle

Travelers are experiencing these top safety-related issues:

Truck Merging

Aggressive/ Distracted Drivers

Speeding

Most people want to see these improvements along the corridor:

High Occupancy Vehicle (HOV) Lanes or Carpool Lanes

Meeting Objectives:

- WEST Project Updates
 - Review of public engagement and how public and stakeholder input was used to influence the project
 - o Updates to EJ Community Mitigation Plan and associated outreach
 - o Introduction and next steps with Community History Preservation Program (CHPP)
- EAST Study Updates
 - Overview of the alternatives analysis process
 - Identification of next steps, including public engagement and how this would translate into the NEPA process

Agenda:

- 1. Welcome
- 2. Presentation
 - a. Update on I-526 LCC WEST
 - i. Project Background
 - ii. A Review of the results of the Public Hearing engagement opportunities, the comments received and how Public and Stakeholder input was incorporated into the project
 - iii. A review of Environmental Justice Specific Outreach since the beginning of the Public Hearing comment period, including pop-up events, neighborhoodlevel meetings, canvassing and Community Office activities. An update was provided on the Community Advisory Council.
 - iv. Public Engagement Touch-Points/Data Driven Strategies A review of the geographical analysis of all outreach conducted to date and how any gaps were being addressed
 - v. Updated EJ Community Mitigation Components
 - vi. Community History Preservation Program Introduction and Path Forward
 - b. Update on I-526 LCC EAST
 - i. Project Overview
 - ii. Summary of Summer 2020 Public Engagement and overall analysis of comments received
 - iii. Concepts Development & Alternatives Analysis Discussion of how concepts were created and analyzed
 - iv. PEL Study Next Steps and Milestones including the next set of public and stakeholder meetings in October 2021
 - c. Questions/Contact
 - d. Final Note(s)

- i. SCDOT should have a much better idea of the schedule going forward by next summer
- 3. Closing

Questions:

- 1. What is the structure of the proposed noise walls- how are they built, what are they comprised of, what else can you tell us about them? (Mary Eaddy)
 - a. Noise wall technology is evolving. DOT has done very few noise walls in the past-there are some going in on I-20 now. They are typically made of concrete for maintenance and safety. They are sturdy enough to not be re-constructing constantly.
 - b. It will probably be at least 5 years before construction begins in these phases [with noise walls], so SCDOT will look at technology again at that time. Of upmost importance is meeting the noise reduction criteria.
- 2. What work is being done to prepare the CAC to transition to an oversight committee? (Ernest "Omar" Muhammad)
 - a. The CAC work is ongoing right now, and the SCDOT team is trying to coordinate the transition to the oversight committee. The role of the CAC vs. the oversight committee role was explained, noting that the CAC is driving the oversight process and "we are learning as we go." Joy hopes that 1 or 2 members of the CAC will carry forward into the oversight committee. SCDOT will try to recruit and include more folks from outside of the CAC who want to get involved, including more agency involvement.
 - b. Joy noted most of the mitigation items will happen prior to the construction of the actual roadway pieces.
- 3. What are the current constraints to bus access on 526? There was an article in the paper that referenced it. (Katie Zimmerman)
 - a. Joy had seen the article Katie was referring to, and she noted that this is an area where SCDOT is focusing their intention. Leadership is aware of the constraints and those will be driving the design. There are currently 12' shoulders proposed as part of the project, but SCDOT knows this might change in the design/build phase with shoulder-use proposed in the future for HOV/bus lanes/etc.
 - b. SCDOT is very aware of the issue, but they do not yet have an answer to it beyond being intentional in design to leave options in the future.

July 2021 Stakeholder Meeting Joy Riley, PE, PMP, DBIA SCDOT

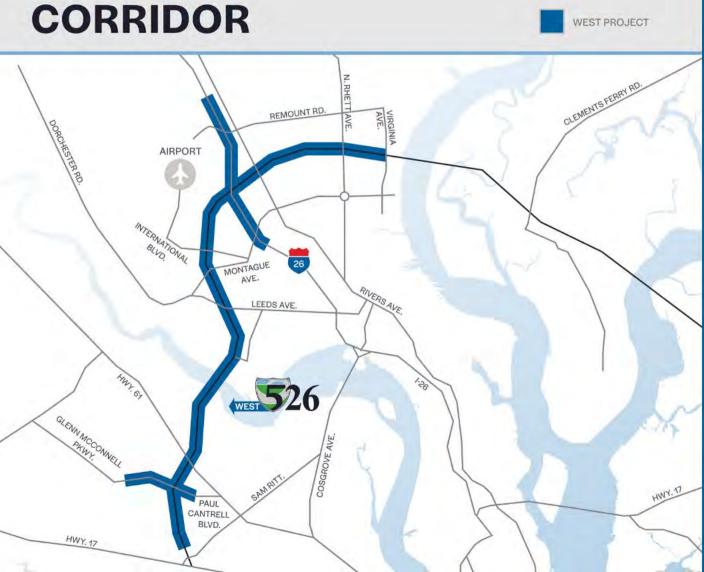

Project Background

An Environmental Impact Statement

I-526 Lowcountry Corridor WEST

Design Improvements Based on Input Received!

✓ Added Community Barriers to the I-26 section at the edge of roadway shoulders to shield the surrounding neighborhoods from Interstate 26

✓ Widened the Westmoreland Bridge design to accommodate a shared use path along the bridge to align with local planning initiatives

Design Improvements Based on Input

Received!

✓ Shifted roadway widening design to the north to reduce impacts to Ashley Harbor's community's walking path and boat ramp

✓ Redesigned the N. Rhett and Virginia Ave. ramps based on comments from the City of North Charleston and local industry

526 Environmental Justice Specific Outreach

2020 Environmental Justice Meetings

Pop-Up Events

- Goal: Participate in local community events to raise awareness of the project, make the Community Liaisons easily accessible, and provide community support during the public health crisis
- 8 events from 9/3/2020 12/18/2020

EJ Community Meetings

- Goal: Encourage feedback from EJ Communities on DRAFT EJ Community Mitigation Plan
- Three meetings in EJ neighborhoods from November 6–14, 2020
- 110 total participants

Local Postal Customer

www.526LowcountryCorridor.com/West/ Community-Commitments

Infrastructure Enhancement Plan Survey

Purpose

Identify community infrastructure needs related to:

- Bicycle/Pedestrian Safety
- Landscaping and Aesthetics
- Pedestrian and Street Lighting
- Speeding Concerns
- Stormwater Management
 - Examples of Bus Shelters were also presented at the Open House on 3/6/2021

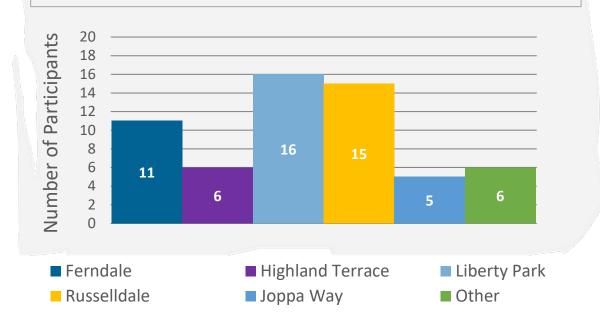

"Tell us about the improvements you would like to see in YOUR neighborhood!"

85 total survey participants:

- 49 paper submissions
- 9 computer submissions
- 27 mobile device submissions

89% of respondents live in EJ neighborhoods

Community Office & CAC

Community Office

- On Rivers Avenue just north of Liberty Park & on transit route
- Full-time Office Manager & 4 Community Liaisons, 2 part-time Right-of-Way Specialists

Community Liaison Activities

- Partner with community service agencies to distribute project information
- Canvassing in impacted communities

Community Advisory Council – has met 18 times from 09/2019 - 05/2021

- EJ Community Mitigation Plan development
- Canvassing & yard signs
- Mitigation subcommittees
- Organization after the project

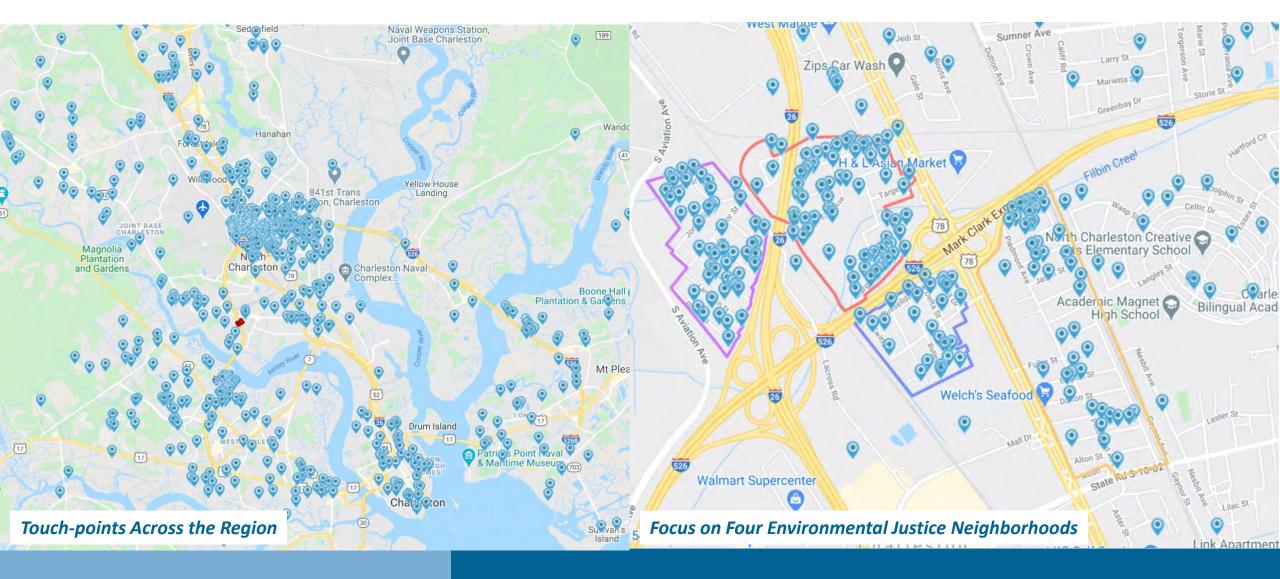

Public Engagement Touch-Points

Using Data-Driven Outreach Strategies

All Public Engagement Mapped

Fall 2019 - Winter 2021

Public Engagement Mapped

Fall 2019 – Winter 2021

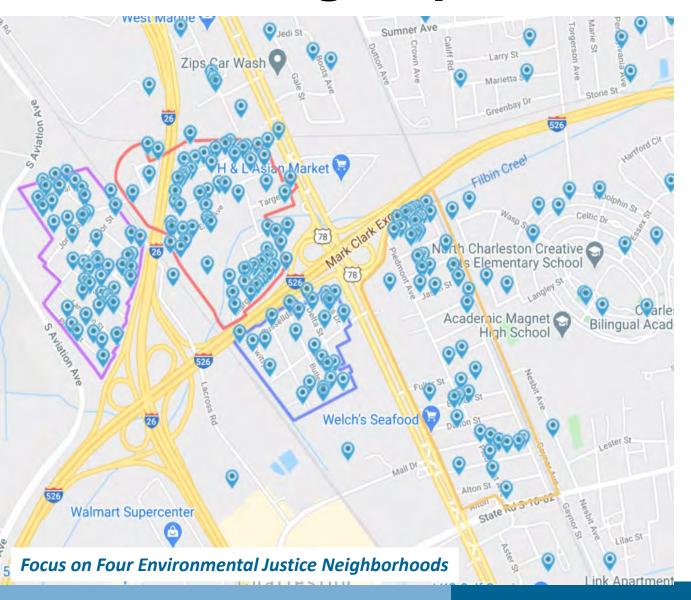

Within each of the Environmental Justice Neighborhoods, the team has touched:

- Highland Terrace: 51 houses (28.5%)
- Liberty Park: 64 houses (38%)
- Russelldale: 27 houses (20%)
- Ferndale: 48 houses (17%)

Addressing Gaps

What has been happening?

 Canvassing neighborhoods that have fewer engagements & capturing contact information while canvassing (1,190 homes have been reached through canvassing)

Additional Team Recommendations:

- Place yard signs in neighborhoods with specific calls to action (with or without flyer boxes)
- Send mailers to let people know specific calls to actions
- Set a "meet a neighbor day" CAC members are tasked with bringing 3 neighbors to meet the team
- Open office to community groups

Updated EJ Community Mitigation Components

CIEP: Pedestrian Bridges

- Improved Highland Terrace & Joppa Way connectivity to replacement community center
- Small bridge over Filbin Creek for connectivity to Russelldale
- Located near existing footpaths across the railroad tracks to help prevent trespassing and provide safe crossing over the tracks
- Additional fencing may be required near the railroad tracks

CIEP: Summary of Potential Improvements

- Recommendations based on input received from the CIEP survey, EJ residents, and the CAC
- Potential improvements are preliminary & subject to change based on coordination with entities such as the Norfolk Southern Railroad & the City of North Charleston

CIEP: Safer Railroad Crossing

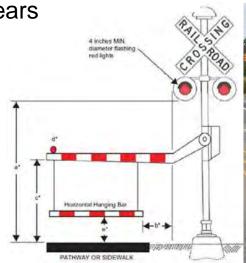

Taylor Street at Jonah Street

- Primary route for Highland Terrace & Joppa Way residents to access Highland Terrace-Liberty Park pocket park
- Identified multiple times as a location needing pedestrian improvements in the CIEP survey
- CAC members noted safety concerns at the railroad crossing

Rail traffic projected to increase in future years

Opportunity to install pedestrian protection measures such as a crossing gate and upgraded signing

Community Resource Guide

Help sustain livability within affected EJ neighborhoods by increasing residents' access to local organizations, resources, and other information on the following topics:

- Food Insecurities
- Health & Wellness
- Home Repair

- Financial Assistance
- Minority-owned Businesses
- Referral agencies

Mitigation Barriers

- To be built on either side of the I-26 corridor from south of Remount Rd to the southern end of the Highland Terrace neighborhood
- Options for reducing noise along I-526 near the EJ neighborhoods include structure mounted barriers, improved pavement surfaces, and/or technology to reduce noise from bridge deck joints.

College Scholarships & Internships

Expanded scholarship programs from \$50,000 to \$100,000 and increased transportation internship programs in order to provide these opportunities for a longer time period during the project development and implementation.

Job Training Programs

- Expanded job training programs to be offered during project development and construction to provide more opportunities to impacted residents
- Initiated job training programs this summer to offer CDL permit preparation classes, CDL Full License Program, and a high school professional development program for residents and student residing within the impacted communities.

Community History Preservation Program

About the CHPP

Highland Terrace
Liberty Park
Ferndale
Russelldale

Purpose

Document the history of the focus neighborhoods through the collection of oral interviews, photographs, maps, and other historical documentation.

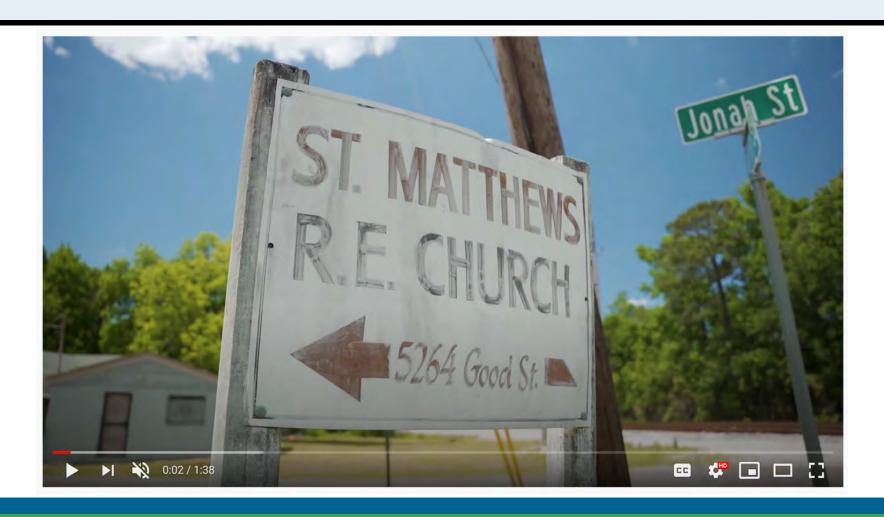

Goal

Final visual product will be integrated into the design of the centrally located replacement community center.

CHPP: Program Video

CHPP: The Process

Oral history interviews

Visual imagery archive

Website for public outreach

Community history report finalized & displays created for the replacement community center

Support Widening

Concepts Development & Alternatives Analysis

Draft Purpose and Need

The purpose for transportation improvements along this corridor is to improve travel time reliability & reduce congestion along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant.

Identified Needs

Mobility

Roadway Deficiencies

Supplemental Project Goals

Compatibility: Align with local land use plans & projects

Safety: Reduce traffic-related crashes

Demand: Accommodate increased numbers of vehicles

Multimodal: Enhance movement through the corridor including through other modes such as carpool, transit, walk, bike or truck

Seismic: Any new roads or bridges should be designed to new earthquake standards

Technology: Accommodate future transportation technologies such as vehicle technologies, system monitoring, driver information and operations technologies

Initial Concept Development

- Intentionally broad
- Encompass all ideas and challenges using:
 - Existing and No Build conditions analyses
 - Stakeholder input
 - Public input
- Address purpose and need
- Address study goals

Preliminary Concepts

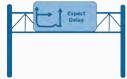

No-Build

The No-Build Alternative Transportation Systems
Management & Operations
(TSMO)

Managed Lanes

Operational Elements

Multimodal Improvements

Infrastructure Improvements

New Location Alignment

Mainline Improvements

1 or 2 additional lanes

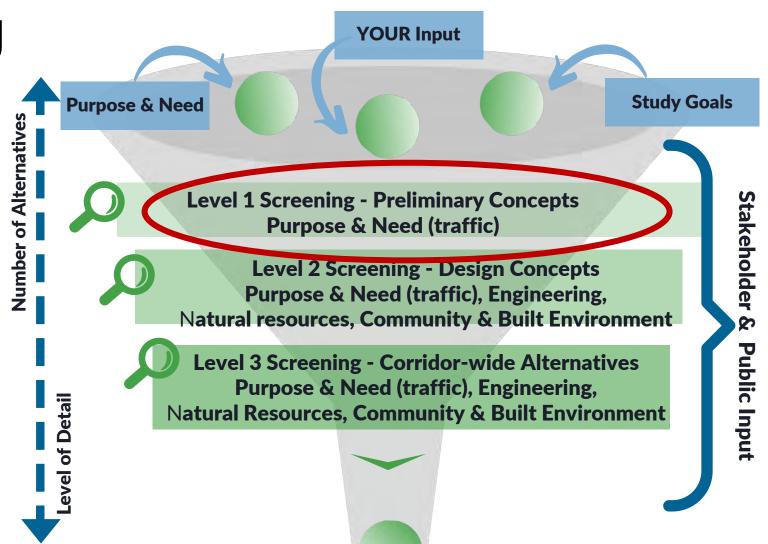

Interchange Improvements

- High-level
- Identify concepts that do not meet the purpose and need
- Improve congestion (Quantitative)
- Improve roadway deficiencies (Qualitative)

LOWCOUNTRY

Level 1 Screening Criteria

- Improve congestion (Quantitative)
 - Performance Evaluation Methodology-CHATS Interim Regional TDM
 - o Improved Level of Service and Volume to Capacity Ratio
 - Reduced Delay and Improved Travel Speed
- Improve roadway deficiencies (Qualitative)
 - o Does the concept have the potential to meet SCDOT roadway design standards?

Level 1 Screening Results

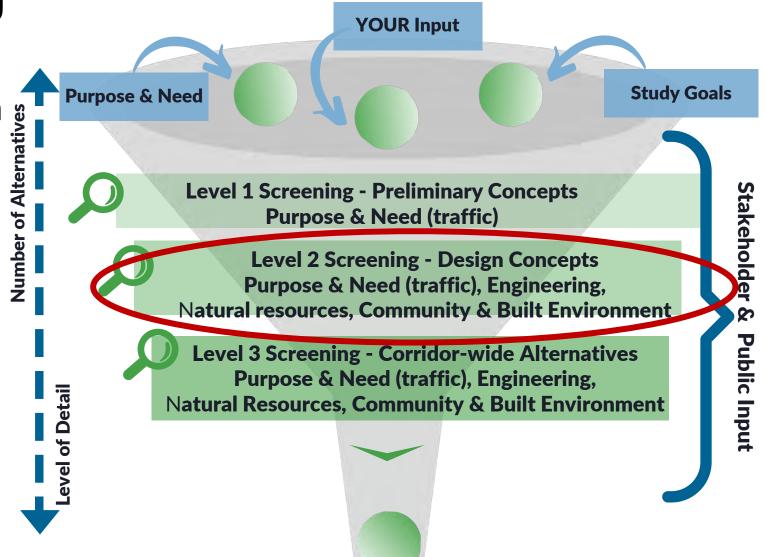

- Concepts Carried Forward
 - No-Build
 - 2 additional lanes in each direction
- Supplemental Options Carried Forward
 - Interchange Improvements
 - Dedicated truck ramps to port (additional facility)
 - TSMO Concepts
- Eliminated
 - New location alignment route
 - 1 additional lane in each direction

Level 2 Screening

- Evaluate conceptual design options against the No-Build
- Screening criteria:
 - Traffic performance (level of service)
 - Compatibility with local projects, seismic resiliency, ports & transit access, constructability
 - Natural resources (aquatic resources)
 - Community and built environment (relocations, parks, cultural sites)

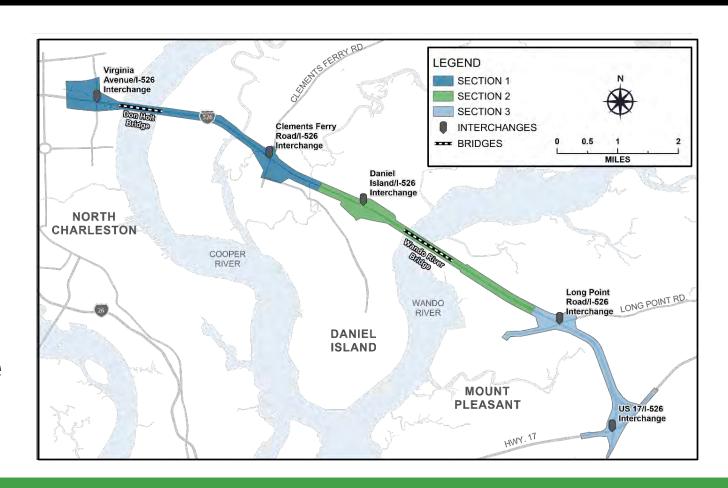

PEL Recommendations

Study Corridor Division

- Divide corridor into three sections
 - Based on engineering and environmental constraints
- Allows for localized design concepts to be evaluated

Conceptual Design Options

- Symmetrical Add capacity symmetrically to each side of the existing alignment
- North Add capacity to the north of the existing alignment
- South Add capacity to the south of the existing alignment
- Retain Retain the current bridge structure(s)
- Replace Replace the current bridge structure(s)

Level 2 Screening Evaluation

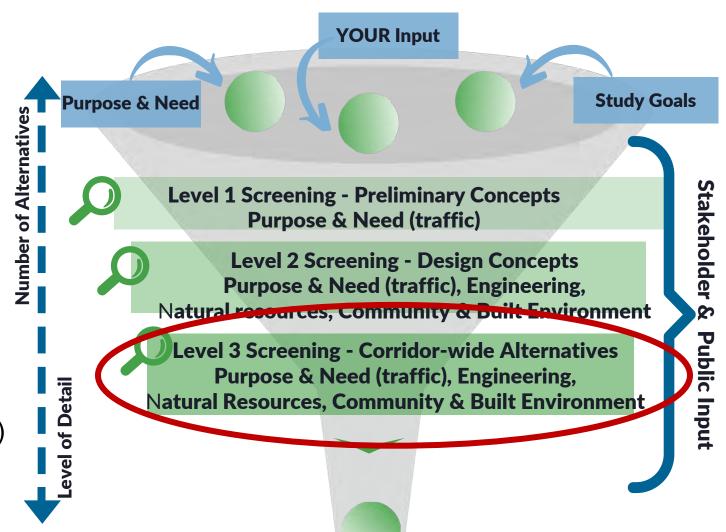

- Conceptual Design Options eliminated for:
 - Failing to satisfy the purpose and need based on traffic performance (LOS F)
 - Significant impact(s) to natural or cultural resource(s)

Level 3 Screening

- Corridor-wide evaluation of conceptual alternatives
- Screening criteria:
 - Travel Time
 - Compatibility with local projects, seismic resiliency, ports & transit access, constructability
 - Natural resources (aquatic resources)
 - Community and built environment (relocations, parks, cultural sites)

PEL Study Next Steps and Milestones

PEL Study Next Steps

- FHWA coordination on concepts development and alternatives screening process
- Stakeholder and public input on reasonable alternatives
- Study recommendations phasing, NEPA class of action, funding opportunities, unresolved issues
- FHWA coordination on PEL FHWA Questionnaire and PEL Study Report

PEL Study Upcoming Milestones

Joy Riley, PE, PMP, DBIA SCDOT Project Manager

Meeting Summary

STAKEHOLDER MEETING

Date: October 7, 2021 **Time:** 10:00 am - 11:30 am

Location: Virtual Teams Meeting

Attendees:

Name	Affiliation
Elder James Johnson	National Action Network
Joyce Kirkland	Ashley Harbor Homeowners
	Association
Steve Kemp	SC Ports Authority
Kevin Shealy	Charleston City Council
Mike Hedgepath	Southeastern Freight Lines
Alexis Kiser	City of Hanahan
Bailey Vincett	Charleston Metro Chamber of
	Commerce
Shane Belcher	FHWA
Betsy La Force	Coastal Conservation League
Brad Morrison	Town of Mount Pleasant
Elizabeth W. Heatley	Code Lynx
Mark Lester	CDM Smith
Amy Livingston	CDM Smith
Victoria Wornom	CDM Smith
Joy Riley	SCDOT
Will McGoldrick	SCDOT
Rick Day	Stantec
Emily Lawton	FHWA
Brent Jonas	CRDA
Mark Smith	SC State Representative
Jenny Brennan	SELC
Sandra Saint-Surin	FHWA
Jason Crowley	Coastal Conservation League
Katie Zimmerman	Charleston Moves
John Singleton	Racial Justice Network
Ron Mitchum	BCDCOG
Scott Barhight	Charleston Metro Chamber of
	Commerce
Savannah Brennan	Charleston Moves

Meeting Objectives:

• EAST Study Updates

- Preview of materials for the upcoming Public Information Meetings
 - How public input has been used to inform the concepts development and screening process
 - Overview of the Reasonable Alternatives
 - Current & future traffic conditions
 - Next steps in the project development process
- WEST Project Updates
 - Overview of the Environmental Justice Community Mitigation Plan & associated outreach
 - Next steps in the project development process

Agenda:

- 1. Welcome
- 2. Presentation
 - a. I-526 LCC EAST Overview
 - b. What is a PEL?
 - c. PEL Study Milestones
 - d. Preview of Public Meeting Materials
 - i. Draft Purpose & Need
 - ii. What did we hear & how did we use the input?
 - iii. Expected traffic growth (2050)
 - iv. How and why do we measure Travel Time Reliability?
 - v. What types of concepts did we look at?
 - vi. Transportation Systems Management & Operations (TSMO)
 - vii. Reasonable Alternative Matrix
 - viii. Don Holt Bridge Features
 - ix. Wando Bridge Features
 - x. Next Steps
 - e. I-526 LCC WEST Schedule
 - f. Engagement and outreach to date concentrated on the 4 environmental justice impacted communities
 - g. Community Office Engagement
 - h. Community Resource Info Sessions
 - i. Community Advisory Council
 - j. Proposed Community Mitigation Schedule
 - k. Community History Preservation Program
- 3. Wrap-up

Questions:

- a. What environmental studies have been done to date? (Elder Johnson)
 - Joy During the PEL Study, we do limited environmental studies. We have only completed preliminary environmental studies/surveys. The next phase of work is the NEPA phase, and that is where we get into specific environmental studies,

such as air quality, noise, environmental justice, etc. We can get you information that has been done to date.

- b. How were alternative modes of transportation like freight barging and a regional ferry system modeled in the alternatives analysis? (Jason Crowley)
 - i. Joy this information comes into play in the model. We have only done high-level traffic modeling to date. When we get into the next phase (NEPA), we take a more specific look. Working with the Port will be key.
 - ii. Follow-up Is barging and a regional ferry system being consider as an alternative to widening? (Jason Crowley)
 - Mark We did get growth information from the Wando Welch and North Charleston Terminals and used it to calibrate our traffic models. We do not know what the Port incorporated into those growth numbers, but from where SCDOT sits, it is very difficult to dictate mode shifts.
 - 2. Joy When you look at traffic analysis, port traffic contributes some, but eliminating port traffic would not solve the problem. These standalone alternatives would not solve the problem we are dealing with today.
 - 3. Clarification on question are you looking at these as individual alternatives? (Jason Crowley)
 - Joy I don't think we have at this point, but that is an excellent comment that we can go back and address likely in the next phase (NEPA).
 - iii. Beyond the freight barging conversation, I second the request to consider how a regional commuter ferry system could help address travel/traffic needs for this project into the future. (Betsy La Force)
- c. Do you have an idea as to which alternative is most viable at this point? (Mike Hedgepath)
 - i. Joy That would be something we analyze in the next phase of work. We are
 just looking at a high level right now. We look at improvement and performance
 verses impacts and try to find a balance
- d. I understand the WestRock facility is for sale how likely would it be that SCDOT would purchase part of this for the westbound bridge? Have you guys been in talks with WestRock? (Mike Hedgepath)
 - i. Joy No, not yet. We would hesitate to do early acquisitions at the planning phase.

- e. Why are the environmental studies being done after this study? It seems like an afterthought. (John Singleton)
 - i. Joy The planning studies are really looking at what is the problem and what are the feasible solutions for solving that problem. We then take the potential solutions and compare them through environmental studies to see which has the least impact during NEPA. There are 2 distinct projects: WEST and EAST. For the I-526 LCC WEST, we have a Draft EIS but for I-526 LCC EAST, we have not started the NEPA process.
- f. I'd like to follow up on Mike's comment on the incident this AM this is the second one we have had this week. It involved a commercial vehicle and a fatality. We keep getting hammered on not maintaining the capacity. When these incidents occur, we do not do a very good job clearing the incident before another occurs. As you move forward, consider putting a greater emphasis on the types of operational improvements you are making. Adding capacity is great, but not if incidences continually disrupt the daily traffic flow. (Ron Mitchum)
- g. Why was ramp metering ruled out? (Ron Mitchum)
 - Joy We looked at ramp metering. It really just pushes the problem to the cross streets. In order for it to work, we would have to implement it at a series of interchanges.
 - ii. Mark It might not generate as much benefit, but that doesn't mean it should be discounted. We were discussing this this morning, and I think we would change the way we look at it/label it moving forward.
- 2. The section that you just covered sounds good (Section on WEST outreach), but it is totally contrary to what is happening in the community. This project is being shoved down their throats. The community that is being affected is African American. The community is being downgraded by two billion dollars. The mitigation plan was not developed with broad representation from the community and the CAC is not representative of the community. The project impacts the voting base, so they will not even be able to protect themselves. It has been in the strategic plan to circumvent the community. (John Singleton)
 - a. Joy I appreciate that. The Secretary is definitely invested in hearing those concerns. She wants to truly understand what the issues are. She came back from the meeting she had with the Racial Justice Network and charged us to look at ways we can do our process while taking into consideration your concerns. The plan is not final yet. We want to sit down at the table with you and hear your concerns and incorporate those and mitigate those.
- 3. Where is the final mitigation plan for the WEST section? I can't find it on your website. Also, how much is SCDOT allocating for mitigation overall and per initiative? Also, what enhancements are being provided to community members who are being relocated? (Savannah Brennan)

a. The final proposed mitigation plan will be put up on the website today (link was provided). The national media coverage we have seen has brought a lot of people to the table, so we are continuing to work through the plan to see if there are final adjustments needed before it is submitted to FHWA. There could be a delay due to this. Our goal was to create affordable housing choices for the impacted communities through the right-of-way program. This is a two-pronged approach to offer housing within close proximity to the City of North Charleston. We would create 100 units of various sizes with a greenspace component and are actively purchasing single family lots within the impacted communities. We hope to have at least 20 lots. These are the minimum commitments, and we can go above and beyond depending on interest. Housing is a huge issue for this project. It is a win/win to create affordable housing.

6 LOWCOUNTRY CORRIDOR

October 2021 Stakeholder Meeting Joy Riley, PE, PMP, DBIA SCDOT

526 Project Background

Planning & Environmental Linkages Study

I-526 LCC EAST Study Area

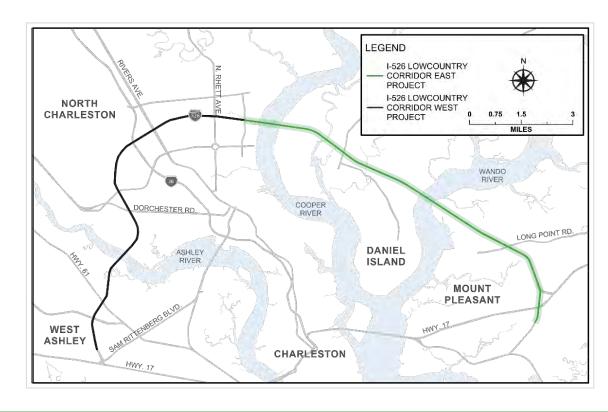

Virginia Avenue to US 17

5 miles elevated structure

What is a PEL?

2

Tool for creating efficiency in transportation development

Considers environment, community & economy

Collaborative & integrated approach to decision-making

What are the Benefits of including a PEL Study in the project development process?

Who Participates?

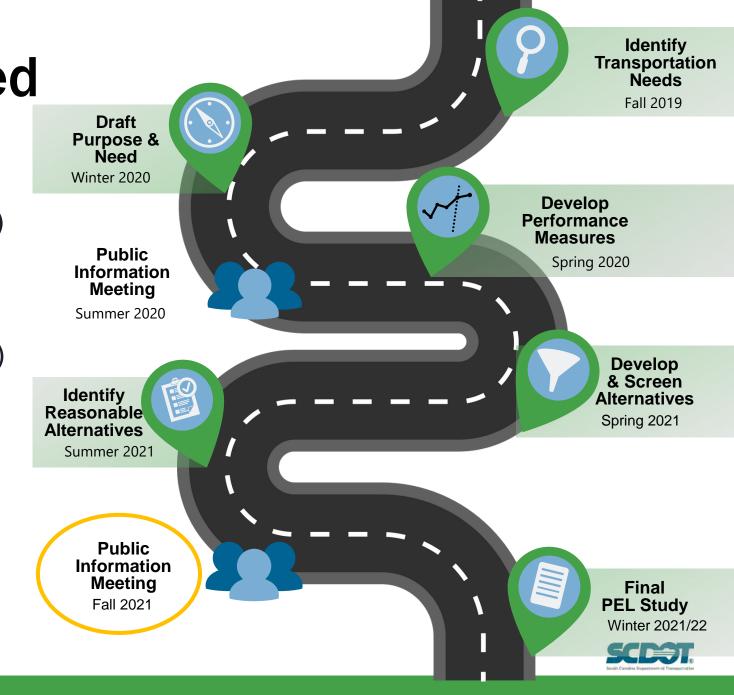

PEL Study Completed Milestones

- PEL Initiation (FHWA Concurrence) March 23, 2020
- MetroQuest Survey
 May 14 August 15, 2020
- Public Information Meeting (Online)
 July 15 August 15, 2020
- Purpose & Need (FHWA Concurrence)
 February 18, 2021
- Concepts Development & Preliminary Screening April/May 2021

Preview of Public Meeting Materials

Draft Purpose & Need

Project Purpose

The purpose for transportation improvements along this corridor is to improve travel time reliability & reduce congestion along I-526 from Virginia Avenue in Charleston to US 17 in Mount Pleasant.

Project Goals

- Safety: Reduce traffic-related crashes use plans & projects
- → Demand: Accommodate increased numbers of vehicles
- Seismic: Design any new roads or bridges with new earthquake standards
- Connectivity: Improve connections with local ports, railway facilities, and transit

Multimodal: Enhance movement through the corridor including other modes such as carpool, transit, walk, or bike

Technology: Accommodate future transportation technologies vehicles, system monitoring, driver information, and traffic operations

Identified Needs

Mobility

This is a busy corridor supporting a large number of people, goods, and services. The key issues are:

Traffic congestion from high traffic volumes & limited capacity

Roadway Deficiencies

The current roads, bridges and interchange ramps are not designed to handle the current or future traffic demands. The key issues are:

What did we hear & how did we use YOUR input?

Meeting Live: July 15 -August 15, 2020

84 **Comments**

83 Online Comments 1 Emailed Comment

Top 5 Comments & Concerns:

21% 📢

Concerned with Noise **Impacts**

Wanted Alternative Truck/ Freight Routes 5%

Support Widening

13%

Concerned with Neighborhood **Impacts**

6%

Wanted Trucks in the Right Lane/ Truck-Only lanes

What We Heard: Public Survey

Survey Live: May 14 -August 15, 2020

3,103

Responses

Most Travelers Experienced Congestion both

Most people use the corridor daily for:

> work, shopping, entertainment & recreation

Top multimodal improvements desired along the corridor:

42% Truck-only Lanes

High-Occupancy Vehicle (HOV) Lanes or Carpool Lanes

OR

High- Occupancy Toll (HOT) Lanes

Most people travel the corridor using their personal vehicl 85%

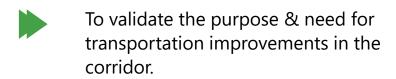

Travelers are experiencing these top safety-related issues:

Speeding

How was YOUR Input Used?

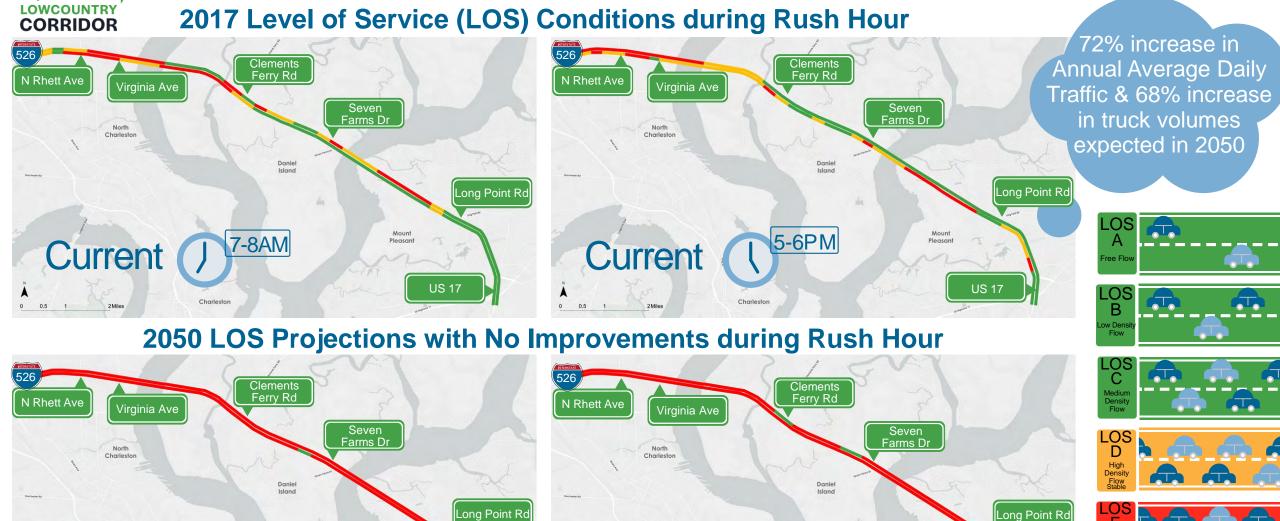

Noise was the #1 concern of the community. When will noise be studied?

More refined designs are needed to conduct a proper noise study; the current designs are high-level concepts.

This is determined during the next phase in the environmental analysis associated with the National Environmental Policy Act (NEPA). Then, multiple types of noise reduction strategies can be explored.

More information on the SCDOT noise policy can be found hon the SCDOT environmental toolkit webpage

How much is traffic expected to grow by 2050?

Future

7-8AM

Future

As of October 2021

5-6PM

How & why do we measure Travel Time Reliability?

Time it takes to get somewhere

How long it would take to get there if you could go the speed limit

The Travel Time Index represents the additional time required to drive a certain route during rush hour (as opposed to when there is no traffic)

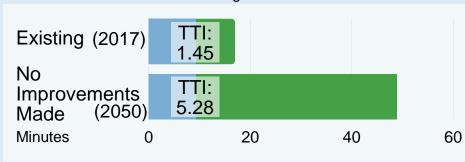

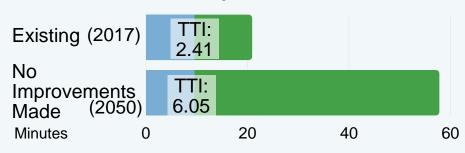

Why use this measure? If roads have a lot of traffic, even a slight disturbance can cause: Excessive Delays, have a Greater Impact, and Take longer to Recover than in a non-congested area.

What would this tell me? How long would it take to go from Virginia Avenue to US 17 in Mount Pleasant in 2050 when there is no traffic (blue) vs rush hour (green)

Eastbound - Going to Mount Pleasant

Middle of the Night

Rush Hour

These graphs explain the Travel Time Index. Blue represents how long it would take to drive the corridor if there were no traffic, like in the middle of the night (2050). Green represents the additional time it would take to travel the corridor during rush hour. The green bars are substantially longer under the no improvement scenario - meaning it would take that much longer to drive the corridor during rush hour in 2050 if no improvements are made.

What does this mean?

If no improvements were made, travel times are expected to increase by 193% traveling Eastbound and 104% traveling Westbound in 2050.

What else could be done to reduce these times?

Learn more about Transportation Systems & Management Solutions in the next stations.

What types of concepts did we look at?

What would happen if no improvements were made?

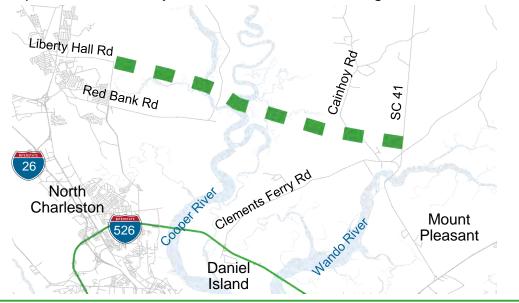

Increased travel times and congestion. Additionally, as congestion increases, congestion-related crashes typically increase.

Parallel Routes

Why not build a new parallel road reduce traffic?

A new alternative route would only provide minimal improvements in congestion and travel speed. It also would not improve the roadway deficiencies of the existing I-526 corridor.

Transportation Systems Management & Operations (TSMO)

What other options could help extend the life of I-526 and/or prevent the need for us to build anything?

TSMO strategies are used to extend the life of a highway and avoid or delay the construction of new lanes. The existing infrastructure may not always support these options without additional construction. In this case, TSMO strategies alone would not provide the level of improvement needed. *Examples*:

Accommodation of Connected & Autonomous Vehicles

Park and Ride

Variable Speed Limit

Shoulder Lane Use

Adding Lanes

If we widen the existing road, how many lanes would we need in each direction? 1 lane in each direction would not improve congestion or travel time enough in 2050. Adding 2 lanes in each direction would improve both congestion and the roadway deficiencies on I-526.

As of October 2021

Transportation Systems Management & Operations

Which transportation system management & operations options were analyzed?

Proposed to be carried forward into NEPA

CORRIDOR

Shoulder Lane Use i.e. "Bus" or "Car on Shoulder"

Shoulders are used as flexible travel lanes during rush hours

Traveler Information
Incident Management
Road Weather Management

Work Zone Management

Park and Ride

Provides parking for ride sharing and bus use

Enhance Lane Markings
Improves driver experience

Variable Speed Limit

Speeds adjusted to optimize traffic flow

Accommodate Connected & Autonomous Vehicles Uses technology to improve safety and operations

Not reasonable for this project

Why not? These managed lanes options (below) do not meet the Purpose & Need of the project without regional implementation. HOWEVER, any project constructed would be done in a manner not to preclude the implementation of a regional plan.

High Occupancy Vehicle Lanes i.e. Carpool Lanes

High Occupancy Toll Lanes
Adds a lane for vehicles with more than
1 passenger or those willing to pay
Dedicated Truck Lanes

Congestion Pricing Includes a toll that increases or decreases to control the number of vehicles

Ramp Metering

Controls the number and pace of cars entering the freeway

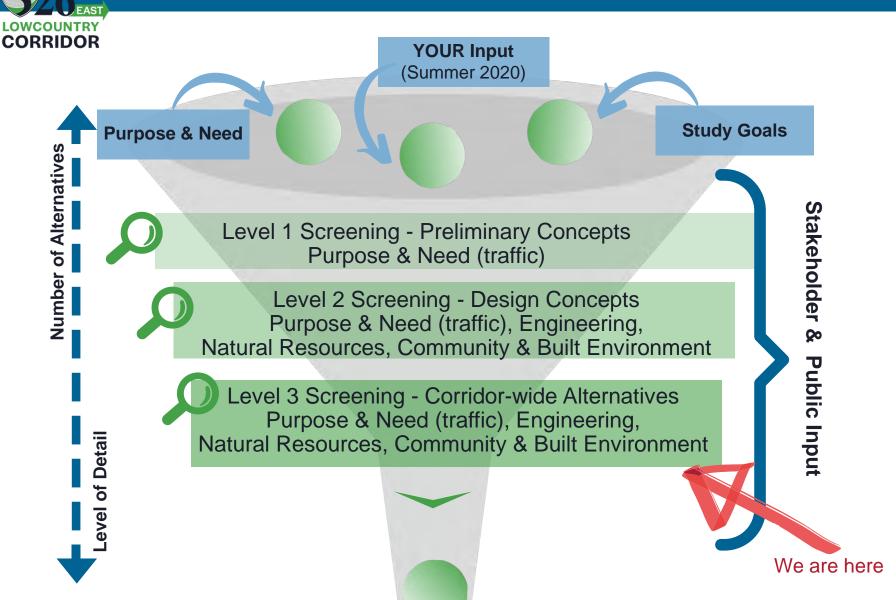

Why not? Some simulation models showed merging issues for general traffic.

Truck Platooning

Uses technology to allow multiple trucks to travel in a very tight formation

Alternatives Concepts Screening Process

How were the alternative concepts evaluated?

The project team evaluated the alternatives through a three-step screening process to identify the reasonable alternatives that are presented today.

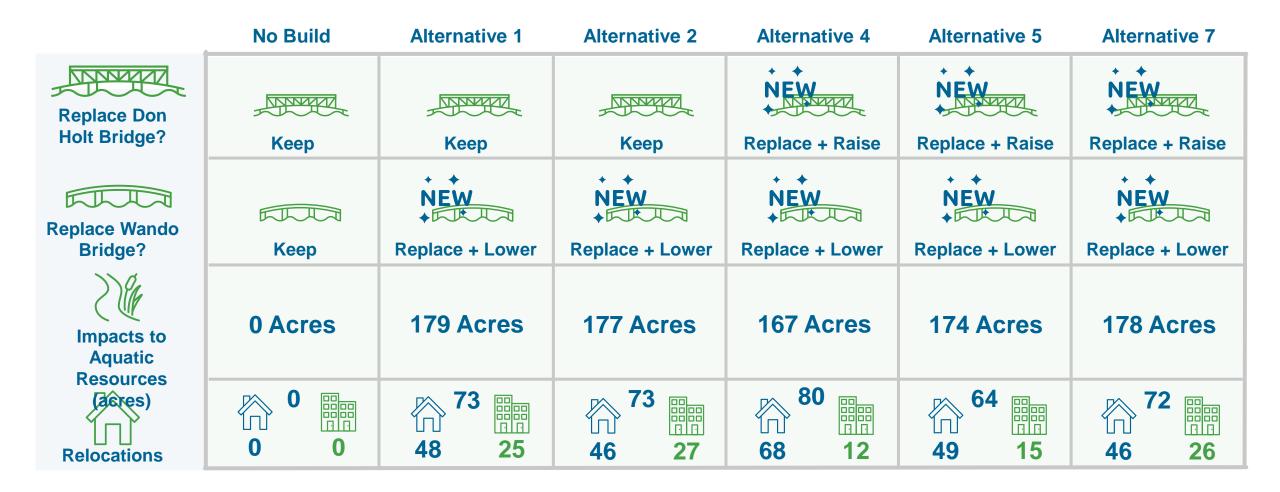

Each level of screening included a more detailed analysis of the alternatives. As the process progressed, poorly performing alternatives were removed from further review.

The resulting alternatives are proposed to be carried forward into the NEPA process.

Reasonable Alternatives Matrix

RIDOR How do each of the reasonable alternatives compare based on the identified criteria?

Reasonable Alternatives Matrix - Continued

How do each of the reasonable alternatives compare based on the identified criteria?

	No Build	Alternative 1	Alternative 2	Alternative 4	Alternative 5	Alternative 7
Impacts to Parks & Recreational Facilities?	0	3 Ralph M. Hendricks Park, Governors Park, Kearns Trail	3 Ralph M. Hendricks Park, Governors Park, Kearns Trail	2 Ralph M. Hendricks Park, Governors Park	3 Ralph M. Hendricks Park, Governors Park, Kearns Trail	3 Ralph M. Hendricks Park, Governors Park, Kearns Trail
Impacts to Threatened & Endangered Species?	No	No	No	No	No	No

All reasonable alternatives, except the No Build, include a 14 ft. shared-use path along the river crossings to provide access for bicycles and pedestrians. The shared-use path along these river crossings would connect with planned and existing facilities and support regional multi-modal goals.

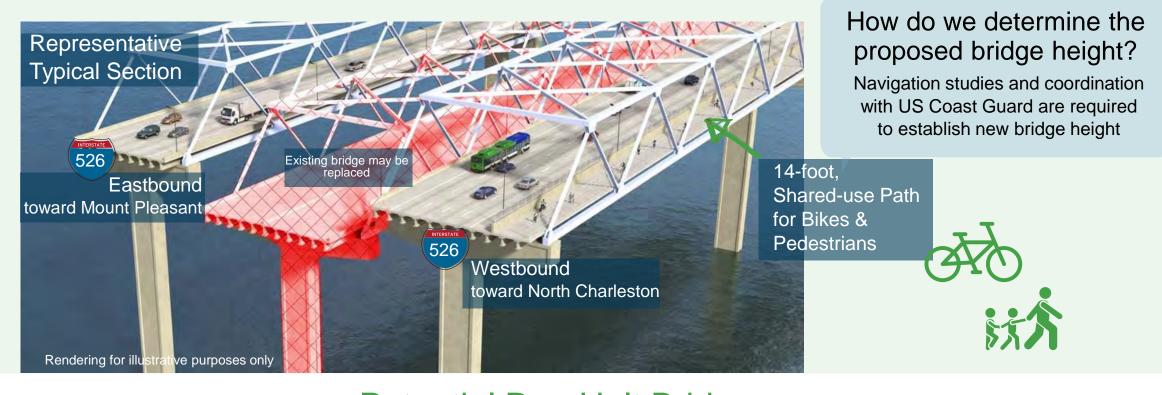

Costs

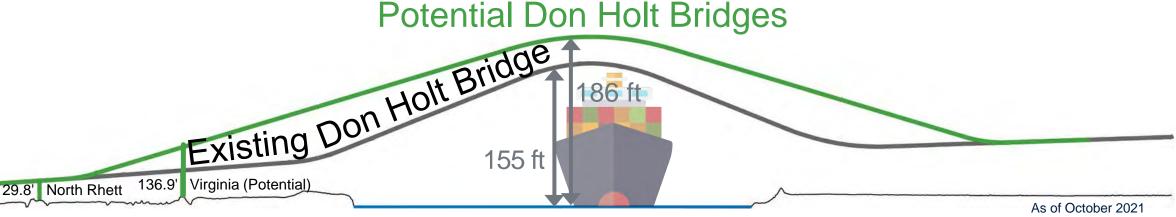

Cost is not a determining factor at this stage. However, variables influencing costs include whether or not a bridge would be replaced, the right-of-way needed, having to move any utilities, and any costs associated with mitigating impacts to the environment or communities.

Don Holt Bridge Features

How tall should the Don Holt Bridge be?

526 EAST LOWCOUNTRY CORRIDOR

Wando Bridge Features

How tall should the Wando Bridges be?

26' Island 26' Seven Park

How do we determine the proposed bridge height?

Navigation studies and coordination with US Coast Guard are required to establish new bridge height

14-foot,
Shared-use Path
for Bikes &
Pedestrians

*65 feet is the typical Intracoastal Waterway clearance required by the US Coast Guard

26'

526 EAST LOWCOUNTRY CORRIDOR

Traffic Performance of Reasonable Alternatives

How do the reasonable alternatives improve the Travel Time Reliability?

All reasonable alternatives have the same lane configurations and therefore would provide similar improvements

Comparing the No-Build vs. Build in 2050

Eastbound - Going to Mount Pleasant

of the Night)

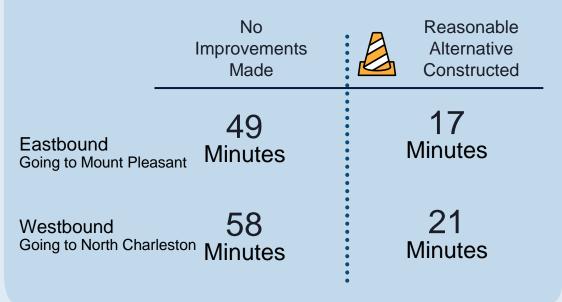

These graphs help explain the Travel Time Index. The blue shows how long it would take to drive the corridor if there were no traffic in 2050 (AKA how long it takes to drive it going the speed limit) and the green shows the additional time it takes to travel the corridor during rush hour. Note, the green bars are substantially longer if no improvements are made - meaning it would take that much longer to drive the corridor.

What does this mean?

The Travel Time Index indicates it would take less time to drive from North Charleston to Mount Pleasant (and the reverse) if any of the reasonable alternatives were constructed

Estimated Drive Times During Rush Hour in 2050

PEL Study Next Steps and Milestones

Next Steps

How does a PEL Study transition to NEPA and what happens after?

PUBLIC & AGENCY INVOLVEMENT

Planning & Environmental Linkages Study (PEL)

1.5 - 2.5 Years

- Planning studies
- Existing conditions analysis
- Future forecasts
- Study goals
- Purpose & need
- Range of alternatives and screened reasonable alternatives
- Cost estimates and Implementation Plan
- Level of NEPA analysis: Categorical Exclusion, Environmental Assessment, or Environmental Impact Statement

NEPA

- 1 2 Years
- Confirm/refine purpose & need
- Detailed environmental studies & noise analysis
- Refine alternatives
- Explore mitigation & commitments
- Prepare decision document

- Final design
- Right-of-way acquisition
- Permitting
- Mitigation commitments
- Construction

Maintenance of

of-way

roadway and right-

Schedules for construction will be established in the next phase based on:

The PEL provides

to better plan the

improvements

schedule for future

SCDOT leadership the estimated project costs

- Priorities
- Estimated Costs
- Available Funding
- Design details

Detailed noise and environmental analysis will be done in NEPA

National Environmental Policy Act (NEPA) requires federal agencies to assess the environmental effects of their proposed actions prior to making decisions. This is the next step after the PEL study.

How can I participate?

How to Participate

WEST Updates

An Environmental Impact Statement

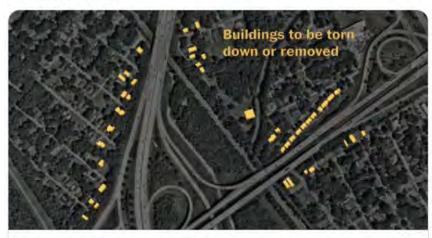

What is missing from this story?

The dismantling of Black communities for highways is not just a thing of the past.

In a planned highway widening project a few miles north of Charleston, 94 percent of displaced residents live in communities mostly consisting of Black and Brown people.

Black people are about to be swept aside for a South Carolina freeway — again South Carolina destroyed Black homes to build I-26 and I-526 without much engagement. The state vowed to engage residents for a new project, but it still ... $\mathscr O$ washingtonpost.com

2021 Community Advisory Council Activities

The project team has worked with the CAC to:

- Formed subcommittees to further develop mitigation commitments
- Shared project information with neighbors
- Advise the project team on adjusting and finalizing mitigation components

- Develop and improve tools to engage with residents
- Serve as a voice for the EJ neighborhoods
- Begin preparing for the Project Oversight Committee

Stay tuned - the Project Oversight Committee is coming soon.

Summer 2021

What has been happening with the I-526 LCC EAST?

We appreciate all of you who shifted from the planned inperson engagements last summer to join us online and offer your concerns and vision for the I-526 LCC EAST (I-526 from Virginia Avenue to US 17 in Mount Pleasant).

Your feedback is critical to the success of this Planning and Environmental Linkages (PEL) Study. Input received now is helping to set the purpose and need and priorities for future improvements within this corridor. The graphics below summarize what we learned from both the survey and the public meeting.

Meeting Live: July 15 -August 15, 2020

526LowcountryCorridor.com

Comments

83 Online Comments 1 Emailed Comment

Top 5 Comments & Concerns:

The online survey began May 14, 2020 and was extended through August 15, 2020 to coincide with the launch of a full online public information meeting, which ran from July 15 through August 15, 2020.

21%

Concerned with Noise Impacts

13%

Concerned with Neighborhood **Impacts**

10%

Wanted Alternative Truck/ Freiaht Routes

6%

Wanted Trucks in the Right Lane/ Truck-Only lanes

Support Widening

Survey Live: May 14 - August 15, 2020

3,103 Responses

Most Travelers Experienced Congestion both ĂM & PM

Top multimodal improvements desired along the corridor:

Truck-only Lanes

High-Occupancy Vehicle (HOV) Lanes or Carpool Lanes

High- Occupancy Toll (HOT) Lanes

Most people use the corridor daily for:

work, shopping, entertainment & recreation

Most people travel the corridor using their personal vehicle 85%

Travelers are experiencing these top safety-related issues:

How was your input used?

To validate the purpose & need for transportation improvements in the corridor.

We heard from you that you experience congestion during morning and evening commutes and that congestion was a top safety concern. This was consistent with the available data - confirming the following purpose statement for any improvements along this corridor:

The purpose for transportation improvements along this corridor is to improve travel time reliability & reduce congestion along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant.

We know it's important to get to work and other places on time. That's why we've also included travel time reliability in the purpose and need statement. Currently, the amount of time it takes to travel along I-526 can vary greatly from day to day. Travel time reliability in this sense means that we're looking to provide some consistency in how long it would take to travel through the corridor from point a to point b. This "reliability" can help you better plan when to leave and which route to take.

Identified Needs

Mobility

This corridor is a busy corridor - with a large number of people, goods and services. The key issues are:

Roadway Deficiencies

The current roads, bridges and interchange ramps are not designed to handle the current or future traffic demands. The key issues are:

To refine project goals.

We also understand that proposed improvements to this corridor must be comprehensive. A PEL study allows us to think strategically and fold in regional and community considerations. With your input, the following goals have been established. These goals provide additional guidance for creating alternatives and the evaluation of those alternatives.

Compatibility: Align with local land use plans & projects

Safety: Reduce traffic-related crashes

Demand: Accommodate increased numbers of vehicles

Multimodal: Enhance movement through the corridor including through other modes such as carpool, transit, walk, bike or truck

Seismic: Any new roads or bridges should be designed to new earthquake standards

Technology: Accommodate future transportation technologies such as vehicle technologies, system monitoring, driver information and operations technologies

Connectivity: Improve connections with local ports, railway facilities and transit

How was your input used?

To develop alternatives concepts.

This PEL study will use several steps to identify, evaluate, and refine planning-level concepts for improving the corridor. The first step includes developing the preliminary alternatives concepts.

A PEL study should consider local planning efforts while offering an opportunity for creating new solutions. As such, the concepts evaluated in this study include solutions identified by the Charleston Area Regional Transportation Study (CHATS) as well as new alternatives based on your input and the analysis of existing and anticipated future traffic conditions.

Preliminary Concept Development

The range of congestion management strategies infrastructure improvements evaluated are identified. Concepts include:

No Build (Do Nothing)

How are these alternatives evaluated?

- Transportation Systems Management and **Operations (TSMO) Strategies**
- Infrastructure Improvements
 - Alternative Alignments
 - Mainline Improvements (Widening 6 or 8 lanes)
 - Interchange/Ramp Improvements

What happens next with the I-526 LCC EAST?

The team will evaluate the alternatives through a threestep screening process to the reasonable identify alternatives that will be carried forward to the Environmental National Policy Act (NEPA) process. Each level of screening involves a more detailed analysis of the alternatives. As the process progresses, alternatives that perform poorly are removed from further review.

YOUR Input Purpose & Need Study Goals Number of Alternatives **Level 1 Screening - Preliminary Concepts** Stakeholder & Public Input Purpose & Need (traffic) **Level 2 Screening - Design Concepts** Purpose & Need (traffic), Engineering, Natural resources, Community & Built Environment **Level 3 Screening - Corridor-wide Alternatives** Purpose & Need (traffic), Engineering, Natural Resources, Community & Built Environment **PEL Recommendations**

Visit our Community Office (5627 Rivers Avenue, Gas Lite Square)

How can I learn more and provide my input?

A set of public information meetings is being planned for later this fall to share more detail regarding the creation and evaluation of potential improvements for this corridor. The meeting will also highlight the proposed reasonable alternatives to be carried forward in the NEPA planning process.

SAVETHE

In-Person & Online Public Meetings tentatively planned for October 26th & 27th!

How does a PEL Study transition to NEPA?

Following the public information meeting, the project team will finalize the PEL Study. This study will provide the framework for implementing future transportation improvements - including possible funding, prioritization, and potential issues that may need to be resolved in NEPA. This process is designed to move the project forward with little to no-need for rework of these important studies. This information will be used to help determine the level of NEPA environmental evaluation that would need to occur. The NEPA process would be able to build on this valuable input by confirming and refining the purpose and need for the corridor. Additionally, the engineering and environmental analysis would build on these initial studies to help determine the preferred alternative.

When could construction start?

The NEPA process must be completed and the project permitted before any construction can occur! See estimated times below to understand the process.

PUBLIC & AGENCY INVOLVEMENT

Planning & Environmental Linkages Study (PEL)

1.5 - 2.5 Years

- Planning studies
- Existing conditions analysis
- Future forecasts
- Study goals
- Purpose & need
- Range of alternatives and screened reasonable alternatives
- Cost estimates and Implementation Plan
- Level of NEPA analysis: Categorical Exclusion, Environmental Assessment, or Environmental Impact Statement

NEPA

1-2 Years

- Confirm/refine purpose & need
- Detailed environmental studies & noise analysis
- Refine alternatives
- Explore mitigation and commitments
- Prepare decision document

Project Implementation

- Final design
- Right-of-way acquisition
- Permitting
- Mitigation commitments
- Construction

Maintenance Operations

 Maintenance of roadway and rightof-way

What is happening with the I-526 LCC WEST Community Mitigation Plan?

What is the Community History Preservation Program?

The purpose of the Community Mitigation Plan for the I-526 LCC WEST, is to effectively mitigate project impacts in partnership with residents of the Ferndale, Russelldale, Highland Terrace, Liberty Park neighborhoods. These four neighborhoods are just a few of many neighborhoods in North Charleston with a rich cultural history. The purpose of the Community History Preservation Program is to record the past of these neighborhoods through interviews with current and former residents; to collect historic photographs of the communities prior to the construction of I-26, I-526, and other developments; and to gather images of the communities prior to the potential construction of the I-526 Lowcountry Corridor WEST transportation project as part of the Community Mitigation Plan.

We encourage you to stay engaged—participate in interviews, share your historic images, and provide information to document the unique historic and cultural elements of your community. Based on community feedback, this program will also be used to inspire design concepts to be incorporated into the appearance of the new community center. Upon completion, a final report will be available at the new community center, the public library, and online. Stay tuned for information regarding community events where you can meet and interact with our History Preservation Program Manager, Professor Damon L. Fordham, and share your stories.

Live or have lived in the Ferndale, Highland Terrace, Liberty Park, or Russelldale neighborhoods? Please contact us at the Community Office by phone at (843) 258-1135 or in person at 5627 Rivers Avenue in Gas Lite Square, North Charleston. Email us at HistoryProject@526LowcountryCorridor.com share stories, pictures, and videos of your memories. Join us, and be a part of history.

Participate in interviews!

Share your photographs!

Be a part of your **Community History!**

How are we reaching out to the community?

Have you seen our Community Liaisons in your community? We have been canvassing in the Ferndale, Highland Terrace, Liberty Park, and Russelldale neighborhoods over the last few months distributing project information and talking with the community about mitigation opportunities, such as job training. This has been a great opportunity to talk with community members face-to-face and invite them to come to the Community Office to have their questions answered. The Community Office and Liaisons are resources for you to learn about project updates and opportunities available under the Environmental Justice Community Mitigation Plan. If you see them out in your community, be sure to stop and say hello!

So far, our Community Liaisons have reached over 1,190 homes across the potentially impacted neighborhoods.

Visit our Community Office (5627 Rivers Avenue, Gas Lite Square)

Is there an update on the professional development training?

Residents of the Ferndale, Highland Terrace, Liberty Park, and Russelldale have been invited to participate in free professional development classes this summer as part of the Environmental Justice Community Mitigation Plan. The initial offerings included a Commercial Drivers License (CDL) permit preparation class, the CDL full license program, and career development training.

Interested? Come to the Community Office or call 843.258.1135 to make an appointment and register for these free courses!

The career development classes are geared towards high school graduates or college students (aged 16+) to enhance their career skills. Training topics may include: interview skills, communication skills, time management, employability, CPR/First Aid, computer classes and more. Classes would last 4-6 weeks online during the weekends and participating students would also be eligible for a stipend for their participation. This is the first round of job training opportunities, but we want to hear from you what training opportunities you would like to see offered next year!

We want to hear from you!

SCDOT Project Manager Joy Riley, PE, DBIA, PMP, CPM info@526LowcountryCorridor.com 843.258.1135(Call/Text)

A Note From Our SCDOT Project Manager

Today, I'm pleased to announce the launch of the <u>I-526 Lowcountry Corridor EAST (I-526 LCC EAST) Public Information Meeting!</u> View information <u>online</u> or participate in-person at one of our open house meetings. Online and in-person, you will have the opportunity to review and provide comments on the draft purpose and need of the study, conceptual roadway improvements, and current and future traffic conditions. Learn about next steps and how this Planning and Environmental Linkages (PEL) Study transitions into the National Environmental Policy Act (NEPA) process.

The I-526 LCC EAST study extends from Virginia Avenue in North Charleston to U.S. Hwy 17 in Mount Pleasant. The purpose for transportation improvements along this corridor is to improve travel time reliability and reduce congestion.

In-person Open House Meetings

 Tuesday, October 26, 5-7 PM, R. L. Jones Center (391 Egypt Road, Mount Pleasant, SC) These drop-in Public Information Meetings will take place partially indoors and partially outdoors and will not have a formal presentation. The City of North Charleston requires masks inside their buildings. Masks are highly encouraged when they are not required. In accordance with current public health guidelines, temperature checks will be performed at all meetings. Anyone with a temperature of over 100.4 will not be allowed to enter the facility. The COVID-19 conditions will be continually monitored. Check our website or call for updates. As a reminder, all materials are available online, including the comment form.

As always, thank you for your interest in the I-526 LCC project.

Joy Riley

I-526 Lowcountry Corridor Project Manager JOY RILEY, PE, PMP, CPM, DBIA SCDOT

I-526 Lowcountry Corridor Newsletter: Special Edition

Issues VIII - Summer 2020

Study Overview

SCDOT conducting **Planning** Environmental Linkages (PEL) Study for I-526 LCC EAST, which extends from Virginia Avenue in North Charleston to approximately US 17 in Mount Pleasant. The PEL study will identify existing and projected transportation issues within the corridor through public and stakeholder engagement. The results of the study will help establish a vision for the corridor that will guide future transportation decisionmaking. This resulting information of the PEL study will be carried into the next phase of project development which is the National Environmental Policy Act (NEPA) process. After the needs are better understood in this corridor, and potential improvements identified, the next steps, including potential phasing and project opportunities, may be developed.

Draft Purpose & Need

Draft Purpose

The purpose for transportation improvements along this corridor is to

improve travel time reliability & reduce congestion

along I-526 from Virginia Avenue in North Charleston to US 17 in Mount Pleasant

Roadway Deficiencies

Shoulder Widths

Traffic congestion from high traffic volumes & incidents

Mobility

Considerations

- Coordinate with local plans & projects
- Accommodate increased traffic volumes
- Enhance mobility for people & goods
- Improve seismic resilience

Over

Capacity

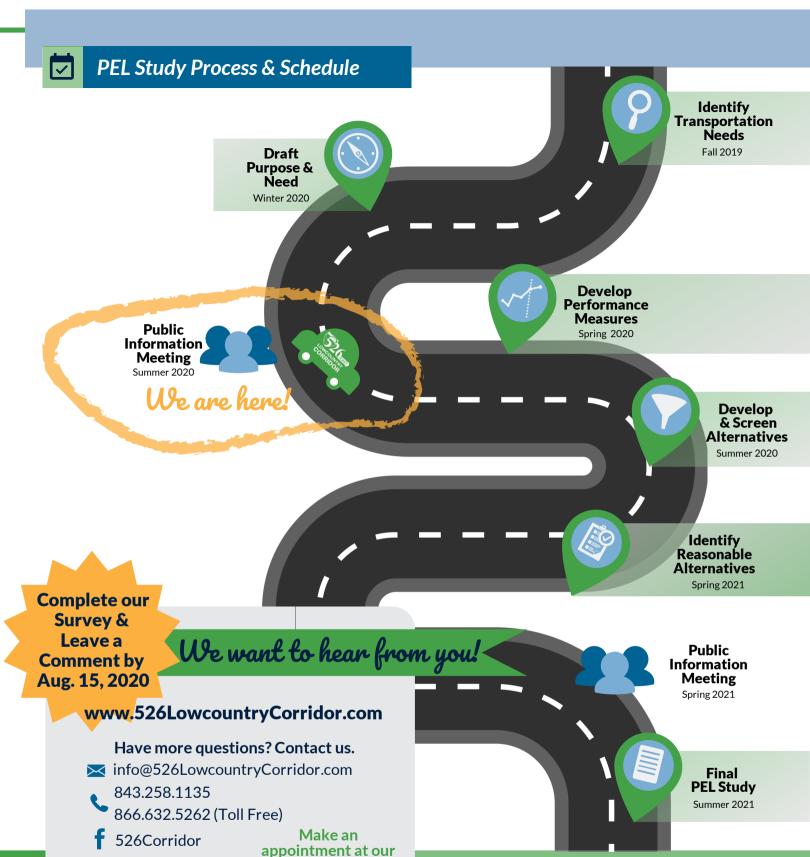

On &

Off Ramp

Lengths

Draft Need

- Accommodate future transportation technologies
- Improve connections with area ports & transit

Community Office:

5627 Rivers Avenue

I-526 LCC EAST Metroquest Survey

Despite the current uncertainty our region and nation are facing, the I-526 Lowcountry Corridor (I-526 LCC) project team continues to move forward with important planning work. Public feedback is a critical component to the success of the I-526 LCC EAST PEL study, so we've created a short survey so you can easily share your concerns about the corridor and the strategies you would like to see us explore to help improve them.

We want to know about your first-hand experience using the I-526 LCC EAST corridor, which extends from Virginia Avenue in North Charleston to U.S. Hwy 17 in Mount Pleasant.

- When do you experience congestion?
- What safety issues do you typically experience when using this corridor?
- What are your main transportation concerns, and where do you see the highest occurrence of them?
- Which solutions would you like us to prioritize based on your needs and/or problems for the I-526 LCC EAST corridor?

We hope you will take the time to complete this short survey to help us better understand the issues that are important to you.

Take our short survey now!

Planning & Environment Linkages (PEL) Study Being Prepared for I-526 LCC EAST

I-526 Lowcountry Corridor EAST (I-526 LCC EAST) project runs from approximately Virginia Avenue in North Charleston to US 17 in Mount Pleasant. Due to the major river crossings along the I-526 LCC EAST corridor, identifying feasible project alternatives and cost estimates are challenging without extensive planning efforts. Additionally, this corridor serves as a major economic connector in the lowcountry, linking the goods that flow to and from South Carolina's busiest port terminal with Interstate 26 and other integral components of the state's freight network. For these reasons, the I-526 LCC EAST project will move forward with a PEL Study. This will allow the project team to extensively study the challenges and

opportunities present in the area, and will allow public engagement regarding possible solutions.

A PEL study is a collaborative approach to decision-making used to identify transportation issues and environmental concerns. This integrated approach considers environmental, community, and economic goals early in the planning process and uses this information to streamline the transportation project development and environmental review process. The resulting information of a PEL study will be carried forward into the next phase of the project development process, the National Environmental Policy Act (NEPA) process.

The I-526 LCC EAST PEL study may result in the identification of multiple potential projects, such as intersection improvements or capacity improvements along the corridor, that could be phased and prioritized for implementation. This will help SCDOT understand the potential number of project packages, delivery methods, schedules, and costs to complete the improvements on this corridor.

PEL Study Benefits

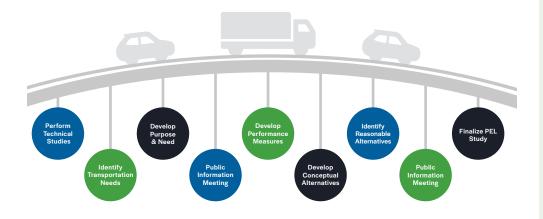

As described by FHWA, potential benefits of a PEL study include:

- Improved sharing of information
- ► Elimination of duplicative efforts in planning and NEPA processes
- Improved communication and stronger relationships
- Early consultation and collaboration among stakeholders to identify potential impacts
- Accelerated project delivery
- Better environmental outcomes
- ► Timely permit decisions
- Mutually beneficial outcomes

I-526 LCC EAST PEL Study Process

Public Involvement

I-526 Lowcountry Corridor WEST:

Where We've Been

Left: Joy Riley presents at a speakers bureau event in summer of 2017. Right: Check-in table at a Community Meeting.

The I-526 Lowcountry Corridor WEST (I-526 LCC WEST) will host a public information meeting on November 21, 2019 at the Charleston Area Convention Center. As we look ahead to this meeting in which alternatives will be presented to the public, we thought a look back at how we arrived at this point was important.

The I-526 LCC WEST project was born out of a 2013 planning study—the I-526 Lowcountry Corridor Analysis project. The purpose of this study was to evaluate potential approaches for improving traffic flow through the corridor. While this report included conceptual interchange and road widening alternatives, these were only evaluated from a traffic analysis standpoint.

Enter the National Environmental Policy Act (NEPA) process. In January 2016, the I-526 LCC WEST, initially called the 526 Lowcountry Corridor (Phase I), began the NEPA process to conduct an

Environmental Assessment along existing I-526 between Paul Cantrell Boulevard in West Ashley to Rivers Avenue in North Charleston.

Shortly thereafter, the newsletter, website, and social media were launched, and the first round of community, stakeholder, and local business meetings were held (July, October 2016).

Above: Community members engage in dialogue at a West Ashley Community Meeting.

Key issues raised included congestion and safety. Additional analysis conducted during this time included: traffic studies; a survey for historic buildings and archeological sites; environmental studies; a hazardous materials study; and a topographical conditions study.

Following this initial level of analysis, the public was invited to participate in a virtual public meeting (October 2016.) During this time, several other local and regional planning efforts were underway, such as the I-26 Corridor Management Plan which includes consideration of managed lanes along I-526. Since these studies were in various stages of completion, the I-526 LCC WEST project's schedule was revised so the results of these transportation planning efforts could be part of the alternatives development and the NEPA documentation processes.

In the spring of 2018, the I-526 Lowcountry Corridor EAST project (formerly known as Phase II) was announced, extending along existing I-526, east from the Rivers Avenue interchange to US 17 in Mount Pleasant.

I-526 Lowcountry Corridor WEST: Where We've Been (Continued)

Initial studies showed severe congestion safety concerns around North Rhett/Virginia Avenue interchange resulting in revisions to both projects' limits to ensure the areas with the greatest challenges would be prioritized. I-526 LCC WEST would now extend from Paul Cantrell Boulevard in West Ashley to Virginia Avenue in North Charleston (as opposed to Rivers Avenue), and the I-526 LCC EAST project would pick up there instead. Additionally, the I-526 LCC WEST project was elevated to an Environmental Impact Statement. The project purpose was refined: to increase capacity and improve operations at the I-26/I-526 interchange and along the I-526 mainline from Paul Cantrell Boulevard to Virginia Avenue.

The upcoming public information meeting will provide the results of this extensive work to date and ask for your feedback on the purpose and need, the roadway improvement concepts (draft reasonable alternatives), community impacts, and more.

Above: Joy Riley speaks at a West Ashley Community Meeting.

Upcoming I-526 LCC WEST Public Information Meetings:

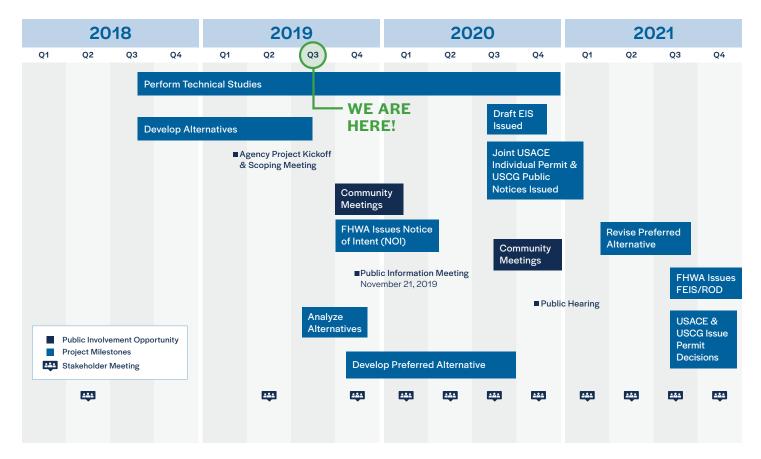

- November 21, 2019 from 11

 AM 7 PM at the Charleston

 Area Convention Center
- Virtual Online Public Information Meeting will be available mid-November through January 4, 2020

I-526 LCC WEST Timeline

^{*} Current Schedule. Subject To Change.

Understanding Right-Of-Way Acquisition

Frequently Asked Questions

When SCDOT builds or improve roads and bridges, we often have to acquire property, known as right-of-way, or ROW. We have uniform practices for conducting property acquisitions, providing relocation assistance, and preparing appraisals. We follow the Uniform Relocation Assistance and Real Property Acquisitions Policies Act of 1970, which protects property owners' rights and ensures everyone is treated fairly and equitably during property acquisitions. Below includes several Frequently Asked Questions about ROW Acquisition. For more, visit our project website at 526lowcountrycorridor.com/west/faqs/ and watch our new video explaining this process!

Q: What is the process for determining the project footprint and which homes/businesses will be impacted by the project?

A: SCDOT roadway and bridge improvement projects are planned and developed through an extensive environmental review process, in accordance with the National Environmental Policy Act (NEPA). During this environmental review process, SCDOT performs environmental and community surveys and evaluates all the potential project alternatives that could be considered to meet the purpose and need of the highway improvements. The new right of way is established by standard offsets from proposed bridges, roadway fills, and drainage facilities that are required for SCDOT maintenance and service operations, as well as for incorporating modern design and safety standards into the proposed improvements. SCDOT seeks to find the project alternative that strikes the best balance between meeting the transportation needs and minimizing the impacts to the natural and human environments.

Community impacts, such as right-of-way impacts and property owner relocations, are considered as a part of the NEPA process. The public and potential impacted communities will be engaged throughout the NEPA process to gather input on the proposed project alternatives.

Q: When does the ROW process start?

A: The ROW acquisition process does not typically start until the NEPA process is completed and a NEPA decision has been issued by the Federal Highway Administration (FHWA), who is overseeing the project. If a build alternative is selected, SCDOT will develop the final ROW plans for the project. Once ROW plans are finalized, the plans will be provided to the SCDOT ROW agents and ROW acquisition activities would begin. In some cases, FHWA will allow an early ROW phase of work for complex project corridors with significant ROW impacts anticipated. SCDOT is currently seeking funding for an Early ROW phase on this project due to the complexity.

: How are you looking to minimize residential and commercial displacements along the I-526 LCC WEST corridor?

A: Finding the right balance between the project footprint and displacements is one of the most difficult challenges to any roadway project. SCDOT is minimizing ROW impacts through design by:

- Widening to the inside of the roadway first
- Bridges and retaining walls are being proposed through developed areas to greatly reduce the impacts that would be incurred with the use of a more cost-effective roadway section of fill
- Proposed roadway alignments have been located away from private properties as much as possible while still allowing for a safe and sufficient operating roadway to be built
- Minimum offsets from existing structures are being used that will still allow for construction and maintenance of traffic during construction

SPRINGTIME FOR I-526 LCC

New Project Limits, Branding, and Website

I-526 LCC West Project

I-526 LCC East Project

As spring arrives with splashes of new color from the flowers and trees, the I-526 Lowcountry Corridor (LCC) emerges out of a long winter of planning and project development. Some significant project changes have developed over the last several months for these two projects that span the 23-mile corridor of existing I-526. For instance, the project limits have been updated. The I-526 LCC West begins at Paul Cantrell Boulevard in West Ashley and now extends to the new terminus of Virginia Avenue in North Charleston. The I-526 LCC East project, now begins at Virginia Avenue and follows the existing I-526 roadway to U.S. 17 in the Town of Mount Pleasant.

One key update is that an Environmental Impact Statement (EIS) is being prepared for the I-526 LCC West instead of an Environmental Assessment (EA). The 1-526 LCC East project is in the planning phase and project feasibility studies are in progress.

Additionally, the I-526 LCC West and East projects also have a new look. The I-526 LCC team has rebranded the two projects so they are easily recognizable and distinguishable. Along with a new look, the project website has been updated and restructured to accommodate information about both projects. The site is still at the same location 526lowcountrycorridor.org, just with a new look and feel.

MILE MARKERS

A look at where we've been and where we're going on the I-526 Lowcountry Corridor projects.

W I-526 LCC WEST

Where We've Been in 2018:

- Project priorities established
- Initial environmental studies completed
- Interchange concepts developed
- NEPA coordination for elevation to EIS

Where We're Going in 2019:

- Alternatives development and analysis
- Community and stakeholder meetings
- Public input on alternatives
- Begin developing preferred alternative

E 1-526 LCC EAST

Where We've Been in 2018 & Where We're Going in 2019:

- Traffic analysis underway
- Survey data collection in process
- Environmental studies underway
- Public involvement plan being developed
- Bridge and roadway feasibility analysis underway

New Website Features Include:

- Educational videos
- Resource maps
- A mobile-friendly interface

I-26 Corridor Management Study

Examining 'Managed' Lanes

Managed lanes are separated from general purpose lanes by a physical barrier or pavement markings. These special purpose lanes are controlled to maintain free-flowing traffic conditions.

Options Include:

Vehicle Eligibility

Buses or carpools

Access Control

Limited on and off ramps

Tolls

Traditional or congestion pricing

Don't be at "A Gloss for Words" when it comes to major infrastructure projects!

We explore and explain common transportation terminology below!

- Corridor: Transportation corridors are typically a linear area with one or more modes of transportation—such as highways, railroads, or public transit—linking major gateways and hubs, where both passenger and freight traffic mix.
- ▶ Environmental Impact Statement (EIS): An
 EIS is a full disclosure document that details
 the process through which a transportation
 project was developed, includes consideration
 of a range of reasonable alternatives, analyzes
 the potential impacts resulting from the
 alternatives, and demonstrates compliance
 with other applicable environmental laws and
 executive orders.
- ▶ Environmental Assessment (EA): An EA is prepared when the significance of a proposed project's effects are not clearly known. An EA essentially determines whether an EIS should be prepared. If significant impacts are identified, an EIS must be completed.

Could tolled, high-occupancy vehicle (HOV) or some other sort of "managed" lanes help improve traffic conditions in the Charleston region?

An ongoing SCDOT study aims to answer that question.

Managed lanes are freeway lanes separated from general-purpose lanes by a physical barrier or pavement markings. They are controlled to maintain free-flow traffic conditions—approximately 45 miles per hour—through vehicle eligibility (buses or carpool), access control (limited on and off ramps), and/or tolls (traditional or congestion pricing).

As part of the I-26 Corridor Management Plan project, the concept of a regional managed lanes network is being analyzed for all of existing I-526, as well as I-26 between Ridgeville and downtown Charleston.

SCDOT officials say the resulting analysis could provide options to improve future freeway operations.

"Because a network of managed lanes is truly evaluated as 'system,' the potential for such improvements are regional in nature," said I-526 Lowcountry Corridor project manager Joy Riley.

The initial stages of the analysis will determine if managed lanes would benefit travelers. If viable, the concept will be refined to identify proposed start and end points and the type of lane to be implemented, whether carpool, express or some other option.

The study includes a review of further improvements to the 1-26 corridor including congestion management and truck mobility improvements, transit service improvements, and interchangelevel improvements throughout the 1-26 corridor.

The preliminary findings of the I-26 Corridor Management Plan, including a regional managed lanes concept, will be presented for public input at a summer 2019 public meeting. Additional information regarding the public meeting will be available on the I-26 Corridor Management project website.

Above: The I-26/I-526 interchange. Below: Free-flowing traffic on I-526 LCC West.

Streamlined Environmental Review Process: One Federal Decision WEST

The Westmoreland Bridge is a key piece of infrastructure on I-526 LCC West.

After initial analysis, it was determined that the environmental review for the I-526 LCC West project should be elevated from an Environmental Assessment (EA) to an Environmental Impact Statement (EIS).

The I-526 LCC West project will follow a streamlined environmental review process mandated by Executive Order 13807: Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure Projects.

This process applies specifically to projects undergoing an EIS.

Through a memorandum of understanding (MOU) called Implementing One Federal Decision (OFD) Under Executive Order 13807, federal agencies agree to actively participate in environmental reviews and communicate with one another in a structured process that starts early in the project development process so

that agencies can "identify concerns, raise potential issues early in the review process, and identify solutions." The MOU also calls for cooperation to accomplish several relevant goals.

The goals of the streamlined process are:

- Completion of all environmental reviews and permitting within two years of the publication of the notice of intent
- Active communication between agencies
- Concurrent agency reviews
- Development of a permitting timetable
- A commitment to the process and improvements of the process

In addition to the MOU, a working agreement between the United States Coast Guard (USCG), United States Army

Corps of Engineers (USACE), United States Environmental Protection Agency (USEPA), United States Fish and Wildlife Service (USFWS), National Oceanic and Atmospheric Administration (NOAA), and Federal Highway Administration (FHWA) was reached for major infrastructure projects that require the preparation of an EIS. these agencies, along with state natural resource and regulatory agencies, have been actively engaged working together to develop a schedule to streamline the NEPA and permitting processes for the project. This should result in quicker delivery of this major project in the Lowcountry Region.

"The 1-526 LCC WEST project is one of the first few Environmental Impact Statements in the nation being developed by SCDOT and FHWA under the One Federal Decision process."

- Joy Riley, SCDOT Project Manager

Joy Riley speaks to Park Circle residents in March 2019.

BRIDGES OF THE LCC

In a region abundant with rivers, bridges play an important role in mobility.

The Westmoreland Bridge (Ashley Crossing) is a Stringer, or Multi-Beam, Bridge that was opened 1982 with an overall length of 3,900 feet.

The Don N. Holt Bridge

The Holt Bridge (Cooper Crossing) is a Truss Bridge that was opened to traffic in 1992 with an overall length of 27,065 feet.

The James B. Edwards Bridge

The Edwards Bridge (Wando Crossing) is a Segmental Box Girder Bridge that was opened to traffic around 1989 with an overall length of 7,900 feet.

Speaking of the I-526 LCC...

Project team engages community via speakers bureau

The I-526 Lowcountry Corridor project team met with community residents in North Charleston March 18, 2019, to answer questions and discuss project progress. The meeting, held at Felix C. Davis Community Center in Park Circle, was organized by North Charleston councilman Bob King and attended by more than 60 residents. If you're interested in having the project team speak to your neighborhood or group about the I-526 LCC projects, please contact SCDOT project manager Joy Riley.

526LowcountryCorridor.org

526 LOWCOUNTRY CORRIDOR NEW SLETTER

ISSUE IV, Spring 2018

GETTING IT RIGHT FOR THE LOWCOUNTRY

526 LOWCOUNTRY CORRIDOR EAST HAS BEGUN!

s noted in the last newsletter, new work on a portion of existing I-526 has begun. Phase II of the project, 526 Lowcountry Corridor EAST, will extend east from the Rivers Avenue interchange to US 17 in Mount Pleasant. Initial survey and aerial mapping efforts are now underway, along with preliminary traffic and planning studies.

The first portion, formerly referred to as Phase I, is now called the 526 Lowcountry Corridor WEST, and extends west from the Rivers Avenue interchange to the Paul Cantrell Boulevard interchange in West Ashley.

The South Carolina Department of Transportation's 526 Lowcountry Corridor Project team understands that this may be the best opportunity for the foreseeable future to make

NORTH CHARLESTON

EAST

DANIEL ISLAND

MT. PLEASANT
ASHLEY

GHARLESTON

significant improvements to the 526 Lowcountry Corridor. We heard the primary concern expressed in public comments, which was that the solution not be a short-term "Band-Aid" that does not fix the problem. This project must provide designs that not only address the current problems in the corridor, but these improvements must work well into the future. The team's approach is that it is much better to come up with the right approach for long-term benefits for the traveling public than to develop a "quick fix for 526."

To that end, the team has been working diligently to complete initial studies needed to begin developing conceptual alternatives for improving the project corridor. Since the start of the project, the team has completed many tasks, including:

- Aerial photographic mapping of the project area
- Baseline conditions hydrology report
- Wetland and stream survey
- Threatened and endangered species survey
- Historical and archaeological sites survey
- Underwater archaeological survey
- Hazardous material sites survey
- Crash analysis to identify problem areas
- Traffic modeling of existing/forecasting future conditions
- Preliminary concepts for improvements

During the course of these and other studies, the team identified many important issues, including the dynamic nature of growth in the Charleston area, the high cost of construction in the Lowcountry, and factors limiting options to improve existing transportation facilities. (CONTINUED ON PAGE 4 »)

DESIGNING FOR THE UNTHINKABLE

Between June and November, residents in the Charleston region are on high alert regarding the potential for a hurricane to make landfall in the Southeast. Fortunately, well-planned evacuation routes and procedures are in place if that occurs.

SCDOT's evacuation protocol for the Lowcountry region consists of reversing the eastbound lanes of I-26 to provide four lanes of westbound traffic flow. The lane reversal begins at the interchange of I-26 and I-526 and continues west until the I-26 interchange with I-77 just east of Columbia in Lexington County.

The 526 Lowcountry Corridor project must consider hurricane evacuation strategies, and design alternatives accordingly. Specifically, all interchange design concepts at the I-526/I-26 interchange must include hurricane lane reversal compatibility.

Under the existing plan, I-526 traffic approaching I-26 from the east is split into two lanes. The right

lane exits normally to westbound I-26. Traffic in the left lane uses the I-26 East exit, but is diverted to travel west on the reversed lanes of I-26. This diversion takes place at a temporary crossover near the base of the ramp.

Traffic on I-526, approaching I-26 from the west, is directed to the I-26 East exit, but is then diverted to travel west on the reversed lanes of I-26. This diversion also takes place at a temporary crossover near the base of the ramp.

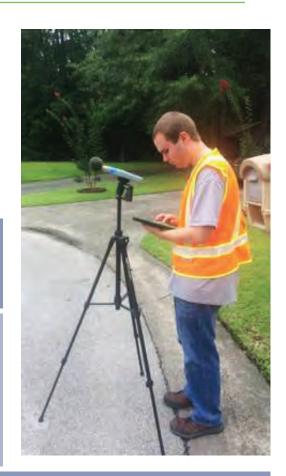

(DON'T) BRING THE NOISE

NOISE ANALYSIS OF HIGHWAY PROJECTS

The Federal Highway Administration's (FHWA) regulation on highway traffic noise requires that we conduct noise studies when building new highways or changing or expanding existing ones. The purpose of a noise study is to learn whether highway traffic sounds will have an impact on nearby outdoor areas frequently used by people. All traffic noise studies and analyses prepared for SCDOT projects adhere to procedures and requirements established by Federal law and follow SCDOT noise analysis guidelines. Key steps in the process of analyzing highway traffic noise include:

- ✓ **Identification** of land uses in the project corridor that may be impacted by traffic noise. Residences, libraries, houses of worship, preschools and daycares, hospitals, schools and parks are the most common locations where a lowered noise level would be of benefit.
- ✓ Measurement of existing traffic noise levels throughout the project corridor. The measurements are taken at representative locations to ensure the noise model will predict realistic results. Some may ask why noise measurements were not taken at their house and assume that they were not considered for noise abatement. The measurements, however, are only used to set and verify the prediction model and not as a basis for noise abatement decisions.

- Noise Modeling is performed using an FHWA approved, computer-based noise model to predict future conditions with the proposed project. Noise projections are reported in decibels (dBA) and based on design year (typically 20 years in the future) traffic forecast information. The project's design details and terrain modifications are included in the model. SCDOT considers a location to be impacted when predicted noise levels reach or approach (within 1 dBA) the criteria for a specific activity area, or if the predicted noise substantially exceeds (more than 15 dBA) existing levels. In either of these situations, noise abatement is considered.
- Noise Abatement is considered for all noise-impacted locations. Consideration is based on feasibility (Can it be built?) and reasonableness (Does it fit in the community and is it cost effective?). Feasible noise abatement measures are those that provide a noise reduction of at least 5 dBA for 75% of the receptors in an impacted area and pose no safety, engineering, or access restrictions. Reasonableness is based on property owner input, the number of impacted locations that are benefited and the cost per benefited location.

For more information about SCDOT's traffic noise abatement policy and how it is applied, or about how noise is measured please click here and select 'Traffic Noise' from the dropdown menu.

CONTINUED FROM PAGE 1

In addition to the initial studies, the team reached out to the public by hosting nine meetings in communities along the corridor that could be directly impacted by the project. Public outreach activities also included frequent educational postings about the project on social media, implementing a project website that provides the public with information and the opportunity to ask questions and submit comments, and hosting multiple meetings for small businesses, large businesses, and other organizational stakeholders from the project area.

The team also became aware of many regional efforts to address transportation needs, some of which are on-going and some of which are completed. These endeavors include:

- The 526 Lowcountry Corridor WEST Traffic Operations Study (SCDOT)
- The 526 Lowcountry Corridor EAST Traffic Operations Study (SCDOT)
- The I-526 Corridor Management Plan (SCDOT)
- The Regional Park and Ride Study (Berkeley Charleston Dorchester Council of Governments, BCDCOG)
- Lowcountry Rapid Transit (Charleston Area Transportation Study, CHATS)

- Lowcountry Go Travel Demand Marketing/Strategy Project (BCDCOG)
- The Regional Transit Framework Plan (BCDCOG)
- The I-26 Corridor Management Study (SCDOT, which will include consideration of managed lanes)
- Walk Bike BCD Bicycle and Pedestrian Master Plan (BCDCOG)

These plans, studies, and projects are to be incorporated into a comprehensive CHATS Regional Interstate Congestion Management Plan (SCDOT).

The best path forward to developing a sustainable solution for the 526 Lowcountry Corridor is to consider the results of these studies and the ultimate recommendations of the CHATS Regional Interstate Congestion Management Plan. This will ensure that the appropriate options for addressing congestion are appropriately evaluated in the NEPA analysis process. Since these studies are in various stages of completion, the 526 Lowcountry Corridor project schedule has been revised so that the results of the transportation planning efforts can be part of the alternative development and the NEPA documentation processes. A copy of the new schedule for 526 Lowcountry Corridor WEST is shown below.

NEPA & Alternatives Development NING 2021 Design Build Procurement MING 2021 TO Final Design Right-of-Way Final Design MIG 2022 TO MIG 2023 CONSTRUCTION Boggin Late-2022 COMING SOON.

526 LOWCOUNTRY CORRIDOR NEWSETTER

ISSUE III, Spring 2017

BREAKING NEWS!!

526 LOWCOUNTRY CORRIDOR WIDENING AND IMPROVEMENTS:

PHASES I AND II

A new portion of existing I-526 has been added to the 526 Lowcountry Corridor Project. This means that improvements are coming to all of existing I-526. Phase I, already underway, will address improvements to nearly 8 miles of interstate between the interchanges at Rivers Avenue in North Charleston and Paul Cantrell Boulevard in West Ashley.

Phase II preliminary development will start soon and will extend these operational improvements approximately 11 miles between mile marker 19 and mile marker 30. To address the existing and anticipated future traffic needs of this corridor, SCDOT, in cooperation with the FHWA, will be performing an in-depth analysis of the needs for this corridor. An Environmental Assessment will be prepared to promote informed decision-making for the improvements to Phase II of the Lowcountry Corridor.

SPECIAL STUDIES

Typically project pre-construction activities include many types of studies to determine potential project impacts. Research of possible historical and archaeological sites is one example. One of the many studies done as part of Phase I was the search for underwater archaeological sites in the Ashley River.

In the winter of 2017, Tidewater Atlantic Research conducted an underwater archaeological survey using magnetic and acoustic (sonar) equipment. The survey identified two magnetic anomalies, or unusual features that could indicate the remains of a vessel or some other underwater feature. One of the sites was determined not to be significant and no further analysis was required. The other site could be the remains of an old ship which may contain information about the maritime history of South Carolina.

DOT projects often result in the finding of historical or archaeological sites that might not be discovered without these pre-construction efforts. Impacts to significant sites are avoided when possible. One day, the mysterious nature of this site may be determined- Is it an old ship, or just a piece of debris lying on the floor of the river? But for now the site will be avoided, leaving it for another day to answer the questions about it.

526 LOWCOUNTRY CORRIDOR

SPEAKERS BUREAU

As the 526 Lowcountry Corridor Design Team works to complete the project, SCDOT is looking for opportunities to share project information and updates with local community, residential, business and civic groups. The project leaders will be happy to meet with your organization.

Anyone wishing to have the 526 Lowcountry Corridor Project Team address their group is asked to provide their contact information and the group's meeting schedule via email, 526distribution@scdot.org, with the subject line: "Speakers Bureau."

LOCAL SMALL BUSINESS OUTREACH INITIATIVE

As part of ongoing public outreach efforts, businesses located nearest the interchanges along the Phase I area were visited, provided project information, and invited to participate in the Small Business Stakeholder Group. The Project Team hopes that through this forum, issues and potential impacts unique to small businesses can be presented and made part of the decision process as the project continues to develop.

Six to seven meetings over the next two years are planned, with the next meetings to be held on May 24, 2017. If your business is located within or near the project study area and you would like to be a member of the Small Business Stakeholder Group, please provide your contact information via email at 526distribution@scdot.org.
