FIXING AND INSTALLATION NOTES:

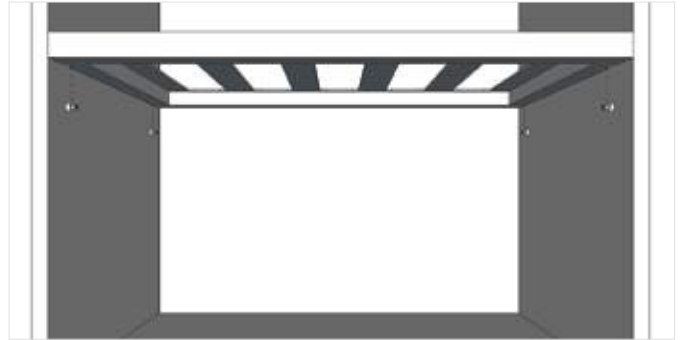

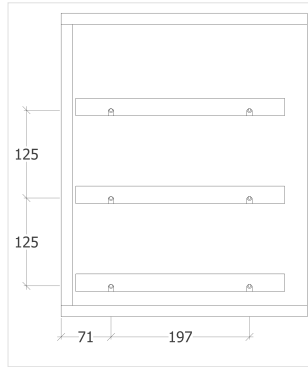

When creating custom panels with the Vinowall or Display Pins, there are a number of items to consider:

- The board used should be no less than 16mm in thickness.
- Screw fixings to connect the Display Wine products to the board are supplied with each component.
- Due to the screws that connect the V-Pins or Display Pins through the board, the custom panel when fixed to the wall will sit 3mm away from the wall and create a small shadowline. If the desired result is a flush panel, then a frame or countersinking the screws will be required.
- Fixing the panel with Vinowall or Display Pins to the wall: (This is our recommendation only and we cannot be held liable for any damages incurred from incorrect panel fixing related to installation etc)
- Wall fixings are for your own supply and will be dependant on the wall and board type chosen.
- Positioning of wall screw fixing into the wall is recommended to be positioned behind bottle placement.
- Quantity of fixings will depend on the size of the panel.
- An average bottle of wine weighs 1.4kg's. So for an example, a 1000mm x 1000mm custom Vinowall panel, when stocked with wine will weigh 115kg's, then the weight of the board plus the weight of the V-Pins or Display Pins can come to almost 200kg's of total weight
- Therefore, ensure that the size, quality and quantity is sufficient for the final stocked product weight.
- The positioning of the V-Pins should read like a "V" with the flat part on top, and the point at the bottom. The reason for this is to space the bottles apart, left to right and above one another in the most economical way. This also allows for a better fit of many different 750ml bottle sizes.
- It is recommended to work with manageable size panels. For the weight and the handling.

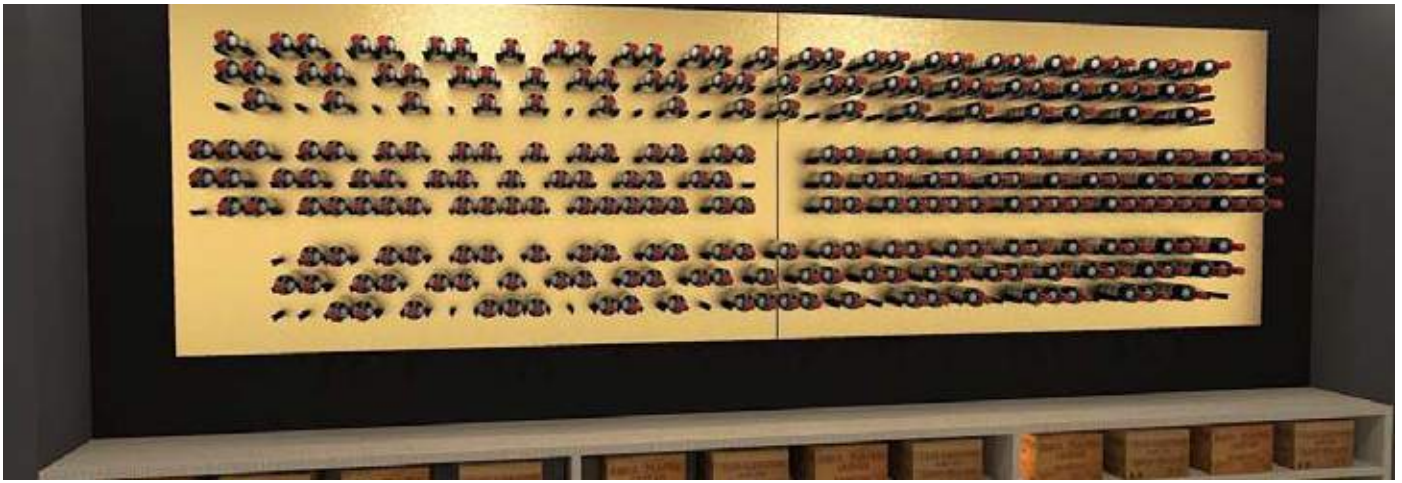

Possible options include 1000mm x 1000mm, 2000mm High x 500mm wide, 500mm High x 2000mm Wide etc.
