ABOUT COLOUR

Colour variation is an inherent property of Limesite. In a single colour cast of tiles one can expect many shades of that colour to occur as well as blasts of white. The variation is what makes Limesite tiles so appealing. Colour variation is not a flaw and should be considered when specifying your projects.

TEXTURE | DIMENSIONS

Dimension surfaces have a lot of visible movement. Our new improved Quad Coat sealer in June 2020 enhances the colour and texture on our Dimensions side of the tile. Surface imperfections are an inherent property of the Dimension side and is not a flaw but rather an aesthetic appeal.

The tiles are hand crafted and our quality control procedures will see to it that there is a level of consistency on the quality.

TEXTURE | SILK

Our Silk surface is a more stable looking surface texture and is smoother to the touch due to the in-mould finish. The tiles will still have colour variation but is not as pronounced as the Dimension side. For a more accurate understanding of what to expect on an installation please look at past projects.

Always look at samples in conjunction with images of projects for an understanding of the aesthetics.

TILE SHAPE AND COLOUR

Different tile shapes have different movements in the Limesite. This means when choosing a Iva do not look at the Tri tile for an understanding of the end result rather look at a tile with a similar shape or past projects of that specific tile.

CUSTOM COLOUR DEVELOPMENT

We pride ourselves in our R&D capabilities and through the years of development and perfecting Limesite we have also created a process that allows us to develop custom colours for clients.

This allows you to have a truly unique project. You provide us with a swatch preferably a Pantone and we will develop a colour match – keeping in mind that there will still be the variations of shades within the casts.

The colour is not an exact match but will be within a range. Like all new product developments, it is not an exact science and there is no guarantee that it will always be achievable to the expected standard however for a small fee it is worth the try for the potential outcome of a truly bespoke installation.

This option is great for hotels, lodges, restaurants and brands.

ABOUT LIMESITE

Wolkberg began the research and development of Limesite in 2013. This journey lead to a truly superior cementitious material like no other on the market with abundant opportunities in product design due to its unique aesthetic appearance and Wolkberg Dimensions surface.

Limesite does not use any reinforcing, glass fibre or polymer in its composition. The strength comes from carefully considered chemistry and production methods. This allows us to shape it into anything we can dream of and opens new doors of possibility in pre-cast concrete product design. No mess, no fuss.

Wolkberg's advanced casting and manufacturing processes ensure that a consistent, quality product leaves the factory sealed and cured to perfection which reduces the possibility of typical defects associated with concrete (cracking and shrinkage).

Wolkberg products are successfully used to create inspiring spaces by leading architects, interior designers and commercial brands across Southern Africa, and the world. Wolkberg's range of surface finishes beckons every creative to dare and be different.

SPECIFICATIONS

SURFACE WEIGHT 64kg/m²

STRENGTH 80mpa - 120mpa

THICKNESS 10mm - 25 mm (depending on range & product)

COLOUR OPTIONS Multiple (see page)

FINISH OPTIONS Silk or Dimensions

FEATURES Stain, scratch & heat resistant

Easy care and maintenance routine
