FROM OUR
DESIGNERS AND CREATORS:
WELCOME TO OUR *PLAYGROUND*.

GEOMETRIC
DESIGN
AMPLIFYING
ARCHITECTURE

3D concrete tiles have emerged as a revolutionary element in contemporary architecture, redefining the way surfaces are designed and perceived. Our tiles with their intricate patterns and dimensional qualities offer architects and designers a powerful tool to transform ordinary spaces into extraordinary works of art. Our main objective is to develop products that can be showcased and utilised by architectural designers all over the globe.

Functional tile design inspired by experimenting and mixing geometric shapes, lines and curves in harmony to create movement and complex patterns.

These tiles can create the illusion of depth and texture, infusing spaces with visual interest and a tactile quality that engages the senses. Our tiles offer a remarkable degree of versatility, as they can be rotated and interconnected to form a multitude of intricate and creative configurations.

CONCEPT

Concrete is one of the most influential, flexible and dynamic materials in modern architecture. The natural imperfect texture of its surface radiates a calming and organic feel to contemporary spaces and creates a unique atmosphere with a element of emotion. What makes our tiles so special is their ability to use light and shadow to create a three-dimensional effect. As light hits the surface of the tiles, the shadows they create give the impression that the wall is moving and changing, seemingly coming alive. This creates an almost hypnotic effect that is sure to mesmerize anyone who sees it. Each tile is carefully crafted to create unique patterns and textures elevating your living space.

Our tiles are not merely a surface or a shape, but a threeD experience that fuses geometry, light and design to refine spaces. Architectural surfaces should transcend mere functionality, evolving into artistic expressions that seamlessly blend curves and angular elements to craft visually captivating forms. This tile doesn't merely constitute a surface or shape, it orchestrates an immersive a three-dimentional experience harmonizing geometry and design to elevate and refine spaces.

PRODUCT

CONCRETE

One of the most remarkable aspects of concrete is its ability to take on virtually any shape. From sweeping curves to angular geometries concrete can be molded into an array of forms offering architects a canvas for their most imaginative designs. It serves as an architectural chameleon, allowing architects to experiment with shapes and textures in ways that were once inconceivable. Its willingness to take on new identities and adapt to the artistic vision of the designer is a testament to its enduring relevance in the ever-evolving world of contemporary architecture.

We take pride in maintaining the authentic appearance of concrete, a hallmark of our products. We never compromise on this authenticity in order to meet protective and durability requirements. Our mission is to awaken the potential of concrete surfaces, accentuating their distinct character. Within the domain of architecture, the emergence of glass fiber-reinforced concrete (GFRC) has ignited a transformative revolution. This innovative material has redefined the possibilities in construction, offering architects and designers a versatile and robust canvas upon which to craft their visions of the built environment. Its durability and lightweight nature make it a sustainable solution that paves the way for innovative design possibilities, while staying true to our commitment to a greener, more eco-conscious future.

MATERIAL DNA

FLOAT 3D tiles are produced with a well mastered manufacturing process that combines intelligent technologies with the finishing touch of human hands. This wonder material is made from Ultra high-performance concrete [UHPC] using a unique formula made up from minerals provided by nature. Advantages of UHPC offers durability, corrosion resistance and excellent thermal and sound insulation. Due to its extremely long lifespan, low maintenance and high level fire safety, it can be equally used for facades, cladding systems, indoor and outdoor decorative surfaces.

Our glassfibre reinforced concrete mainly consists of various aggregates and cement. Glassfibers, colour pigments and concrete additives make up around 10% of the mix design, this combination makes our tiles extremely robust and durable. FLOAT tiles also meet the requirements of fire protection class A1 "non-combustible" and is environmentally neutral as no additional treatment or chemical coatings are necessary for fire protection.

MATERIAL PERFORMANCE DATA

CONCRETE COLOURS

FLOAT tiles are coloured with natural iron oxide pigments and integrates well with surrounding elements while blending in with nature. Our tiles have consistent colouring throughout the entire product, the iron oxide is added during the production phase when blending all the raw materials, these oxides are UV stable and will not fade. Over time environmental factors like weather, air moisture and dirt will naturally age concrete.

Note: Due to technical reasons digital/printed colours may differ from the actual natural shade. Custom colours can be produced upon request at an additional charge.

METALLIC COLOURS

Our concrete tile metallic coating with advanced Duco technology offers a unique blend of style, durability and versatility. Whether you're looking to create a striking feature wall, an eye-catching accent, or an impressive exterior facade, these metallic coatings can add a touch of sophistication and luxury to your design projects. With various customization options and ease of maintenance, they are a wise choice for those seeking both beauty and practicality in their architectural and interior designs.

The VECTOR concrete tile is a unique diamond-shaped creation that marries a gently slanted plane with a strikingly contrasting triangular offset, resulting in an exquisite three-dimensional identity. The diamond motif resembles Renaissance harlequins, invoking an old-world aesthetic that adds a touch of timeless charm. This tile invites exploration through its adaptability, effortlessly transitioning into a plethora of configurations that yield captivating geometric patterns. When exposed in light, the atmosphere is enhanced by a symphony of reflections that transforms the space into something magical.

Its application on a wall offers the flexibility of both complete coverage or selective placement. When illuminated by light, the walls will transform the atmosphere breathing life into your space.

The mystical movement of the geometric dunes.

This concrete tile embodies a striking and dynamic design, characterized by its curvaceous and edgy aesthetics. Drawing inspiration from the undulating shapes of sand dunes, this tile captures the essence of motion and form found in desert landscapes. Its abstract portrayal of movement artfully translates the intricate interplay of natural forces and organic contours present in these arid terrains. The primary objective is to craft an environment that exudes tranquility, taking cues from nature's organic forms, providing a soothing counterbalance to the rapid pace of modern life.

When bathed in the presence of light, this architectural element transforms into a mesmerizing kaleidoscope of reflections, casting an enchanting aura. This interplay between light and form bestows an almost magical ambience upon the architectural space, inviting occupants to experience an immersive visual journey.

EIFFEL

GREEN CONCRETE

OUR ENVIRONMENT

Our concrete is made of 38% waste by-product and recycled materials. It's up to us as concrete producers to do what we can where we can to minimize our impact on our planet. The industry already repurposes industrial byproducts that would otherwise be considered waste(fly ash, slag, silica fume). When these materials were introduced a few decades ago, they were met with healthy skepticism but over time we came to realize that we could use these materials to save money, reduce emissions, and make better concrete. As an industry we always need to embrace innovation to create a stronger product and reduce our impact on the environment. It's the right thing to do and it makes sense, that's the type of logic that drives our industry.

ZERO WASTE GREEN CONCRETE

Our concrete is designed to be better for the environment and your budget while also improving the performance characteristics of our product. The concrete mixture uses a high percentage of recycled materials. FLOAT aims to reduce or avoid consumer waste by replacing certain raw materials with recycled glassfibre reinforced concrete. The biggest impetus for continuous development is the demand to create more than just sustainable concrete products in order to make an active contribution to the energy revolution.

SUSTAINABILITY

The ecological idea behind concrete is consistently implemented in the manufacturing of our tiles. The production of FLOAT tiles require a low amount of primary energy, which in turn minimizes CO2 emissions and the greenhouse effect. Our product consists of purely mineral raw materials and is therefore completely recyclable. FLOAT pursues a holistic approach that covers the entire range of sustainability and meets the high demands of ambitious modern architecture.

INSTALLATION

Attention to detail and adequate project planning is needed when installing FLOAT concrete tiles. Approved contractors should have expertise in installation techniques and proficiency in cutting methods to ensure the best results.

For more information see our installation guide on our website floatconcrete.com

PREPARATIONS

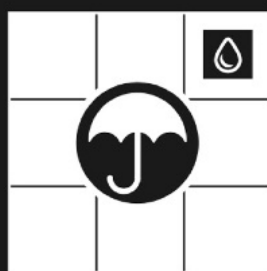

Check load bearing capacity of substrate

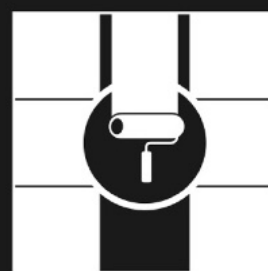

10-30 °C / 50-86 °F

Tiling operating temperatures

Make sure walls and substrate is waterproof

Recommended to paint wall similar colour as tile

FIXING

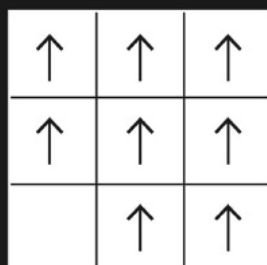

< 30 kg/m²

Polyurethane based

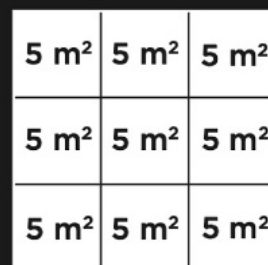

U1, U2, R1, E5

Polymer based

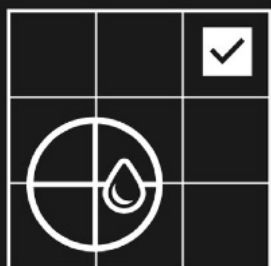

Always begin tiling from the bottom

Large areas should be processed in sections

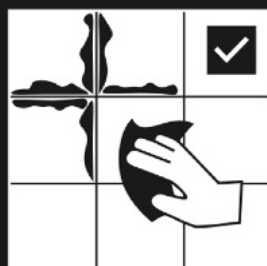

SURFACE

Tiles comes sealed and waterproof from factory.

Avoid scratching tiles as this will damage the sealer

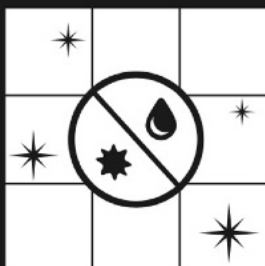

Remove any glue residue immediatly from tiles.

MAINTENANCE+ CARE

For more information see
our installation guide on our
website floatconcrete.com

SEALANTS

Tiles are treated to
protect from stains.

Exterior areas needs a
water repellent coating

FLOAT tiles are sealed with an engineered silicone based penetrating sealer. A water repellent treatment is recommended for exterior walls every 5 years. Contact us if you need more information.

MAINTENANCE

In case of contamination
tiles should be cleaned
instantly.

Strong impact can leave
marks on tile faces

For cleaning the tiles simply use water along with a gentle degreasing soap. Do not use chemicals or abrasive substances and avoid scratching the tiles against each other or with sharp objects.

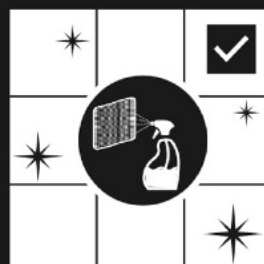

CLEANING

Do not use chemicals or
abrasive products

For everyday cleaning use
feather dusters or
microfibre textiles

Use a spray bottle with
water and a small
amount of soap.
