## BIG - Bjarke Ingels Group

BIG is a Copenhagen, New York, London and Barcelona based group of architects, designers, urbanists, landscape professionals, interior and product designers, researchers and inventors. The office is currently involved in a large number of projects throughout Europe, North America, Asia and Middle East.

BIG's architecture emerges out of a careful analysis of how contemporary life constantly evolves and changes. Not least due to the influence from multicultural exchange, global economical flows and communication technologies, that all together require new ways of architectural and urban organization. They believe that in order to deal with today's challenges, architecture can profitably move into a field that has been largely unexplored. A pragmatic utopian architecture that steers clear of the petrifying pragmatism of boring boxes and the naïve utopian ideas of digital formalism. Like a form of programmatic alchemy, they create architecture by mixing conventional ingredients such as living, leisure, working, parking and shopping. By hitting the fertile overlap between pragmatic and utopia, they once again find the freedom to change the surface of our planet, to better fit contemporary life forms.

2021

Stellar Nebula is an interpretation of traditional glass manufacturing with BIG innovative vision and Artemide know-how.

A new project that reflects on the limits, values and roles of industrial and artisanal production to combine them in a solution that makes uniqueness and seriality coincide.

Artemide has always presided over the knowledge of the present and the future but also protected and enhanced the knowledge of the past in a contemporary key, such as the glass blowing carried out in its glass factory in Venice.

In this project, BIG draws the volumes of a suspension and lets the beauty of craftsmanship emerge, declaring the value and uniqueness that comes from ancient techniques handed down for generations.

# Serial Uniqueness

The master glassmaker is called upon not only to give shape by blowing inside the standardized mold but to express his know-how with interventions that softly reshape the regularity of the basic geometry and accentuate the diversity of each piece made by hand.

Three volumes of different sizes generate pieces that are always unique. The crystal glass thus created is then treated with an innovative dichroic finishing process.

Artisanal know-how and industrial innovation thus come together in the beauty of the material that enhances the magic of the interaction between glass and light.

## Sustainable Finishes

Dichroic finishes made  
with an innovative and sustainable  
metal vacuum deposition process  
PVD (Physical Vapour Deposition)

- 0 emissions, 0 waste
- Solid protective clearcoat
- Only 5% of solvents  
(traditional systems: 75% of solvents)

# Enhanced Beauty

Stellar Nebula family is now completed with a floor, table and ceiling version made with the medium size diffuser.

To compose your world

## A playful vision

The new table version does not add fixed elements to the blown glass diffuser, it simply combines it with a transparent glass base that acts as the perfect base to accommodate the always different geometries of Stellar Nebula.

The diffuser can be placed on this base which supports it according to free inclinations, enhancing its simplicity and uniqueness without interfering with the light colored reflections of the light that filter through the dichroic finish.

# Stellar Nebula

**Materials:** aluminum body, blown glass diffuser

**Colours:** cristal glass with dicroic gradient

**Diffuser ø16:**

Total Power: 8W

Delivered Luminous Flux: 600 lm

**Diffuser ø22:**

Total Power: 11W

Delivered Luminous Flux: 486 lm

**Diffuser ø30:**

Total Power: 20W

Delivered Luminous Flux: 1890 lm

**Diffuser ø40:**

Total Power: 28W

Delivered Luminous Flux: 2536 lm

3000K
