LINEAR FACEBRICKS

Linear bricks, also known as long format or Roman bricks, have become increasingly popular in contemporary architecture, particularly in facade designs.

Their appeal lies in their ability to emphasize horizontal lines and add a sleek, uniform aesthetic to buildings. Originating in Roman times, these bricks have evolved to stay relevant in modern construction, offering a balance between traditional masonry and contemporary design elements.

The elongated shape of linear bricks creates a visually striking effect, enhancing the linearity of a facade and contributing to a more refined, detailed appearance. This combination of historic charm and modern functionality makes linear bricks a versatile choice for architects looking to create facades that are both timeless and innovative.

These versatile blocks can be used in various applications, including yard enclosures, fencing, decorative screens, balustrades, wall adornments, and creating outdoor rooms.

Produced in countries such as Spain, India, Mexico, Florida, and South Africa, Screen blocks often evoke memories of 1960s beach bungalows. However, their use has evolved considerably in recent years.

Screen blocks now serve as eye-catching design features for maximalists who seek bold, striking elements, while their availability in neutral colours and clean lines also caters to minimalist aesthetics.

Wine Racks & End Stops

Fired clay (terracotta) wine racks provide several advantages for wine storage. They help maintain a consistent storage temperature and humidity, shielding wine from temperature fluctuations.

The durability of terracotta ensures that these racks do not deteriorate even in cool, humid cellar conditions, making them perfect for wine storage. Beyond their practical benefits, terracotta wine racks are also visually appealing, serving as an attractive feature in any setting. Their unique hexagonal shape allows for the addition of more racks as needed, offering a customizable storage solution.

To enhance the display further, a wine rack end stop can be incorporated. This addition completes the honeycomb design, enabling the wine racks to be displayed freestanding while giving the overall setup a polished and finished look.
