

PHOENIX STONE ENGINEERED-QUARTZ

CARE & MAINTENANCE GUIDE

To ensure you reap the full benefits of your beautiful Phoenix Stone Engineered-quartz surface, we have compiled a list of care essentials and maintenance tips.

Please read the below and if you need any additional information, we are happy to assist you further.

GENERAL

- Phoenix Stone surfaces are durable and does not need to be sealed or polished, however, regular gentle cleaning is required to maintain its beauty.
- Whilst Phoenix Stone is heat resistant it is not heat-proof, therefore we do not recommend placing any hot items directly on your Phoenix Stone surface. Rather use trivets for hot pots and pans.
- Phoenix Stone is scratch resistant; however, we still recommend the use of cutting/ chopping boards to avoid accidentally striking the surface. Cutting or chopping on a board will also prevent the blades from getting prematurely blunt or damaged by the engineered-quartz surface.

MAINTENANCE AND CLEANING

- Clean your Phoenix Stone surface with lukewarm clean water, any mild or non-abrasive cleaning solution and a soft or microfiber cloth.
- Spills from high-staining liquids (coffee, tea, wine, etc) should be wiped up immediately to ensure no staining.
- For hardened or dried-on stains or materials, such as dried paint, gently scrap away with a plastic knife, then apply a degreasing cleaning solution, wipe with a damp cloth and rinse with clean water.
- Be gentle with cleaning. Do not forcefully scrub your engineered-quartz surface.
