Revision 003

July 2018

Document Number: 337029-003

Intel products described herein. You agree to grant Intel a non-exclusive, royalty-free license to any patent claim thereafter drafted which includes subject matter disclosed herein.

No license (express or implied, by estoppel or otherwise) to any intellectual property rights is granted by this document.

Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Performance varies depending on system configuration. No computer system can be absolutely secure. Check with your system manufacturer or retailer or learn more at intel.com.

Intel technologies may require enabled hardware, specific software, or services activation. Check with your system manufacturer or retailer.

The products described may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Intel disclaims all express and implied warranties, including without limitation, the implied warranties of merchantability, fitness for a particular purpose, and non-infringement, as well as any warranty arising from course of performance, course of dealing, or usage in trade.

All information provided here is subject to change without notice. Contact your Intel representative to obtain the latest Intel product specifications and roadmaps.

§ §

1 Description and Features

Description

The Intel® RealSense™ D400 series is a stereo vision depth camera system. The subsystem assembly contains stereo depth module and vision processor with USB 2.0/USB 3.1 Gen 1 or MIPI[1] connection to host processor.

The small size and ease of integration of the camera sub system provides system integrators flexibility to design into a wide range of products.

The Intel® RealSense™ D400 series also offers complete depth cameras integrating vision processor, stereo depth module and RGB sensor with color image signal processing. The depth cameras are designed for easy setup and portability making them ideal for makers, educators, hardware prototypes and software development.

The Intel® RealSense™ D400 series is supported with cross-platform and open source Intel® RealSense™ SDK 2.0

Features

- 2nd Generation Stereo Depth Camera System
- 2nd Generation dedicated Intel® RealSense™ Vision Processor D4 with advanced algorithms
- Infrared (IR) Laser Projector System (Class 1)
- Full HD resolution Image sensors
- Active Power Management
- Selection of Stereo Depth Module options to meet your usage requirements

1. MIPI is not currently supported. Please contact your Intel representative on MIPI enablement timelines.

Usages/Markets

- Drones
- Robots
- Home and Surveillance
- Virtual Reality
- PC Peripherals

Minimum System Requirements

USB 2.0/USB 3.1 Gen 1
Ubuntu*16.xx/Windows*10

Intel® RealSense™ Depth Camera D415 Features

- Intel® RealSense™ Vision Processor D4
- Up to 1280x720 active stereo depth resolution
- Up to 1920x1080 RGB resolution
- Depth Diagonal Field of View over 70°
- Dual rolling shutter sensors for up to 90 FPS depth streaming
- Range 0.3m to over 10m (Varies with lighting conditions)

Intel® RealSense™ Depth Camera D435 Features

- Intel® RealSense™ Vision Processor D4
- Up to 1280x720 active stereo depth resolution
- Up to 1920x1080 RGB resolution
- Depth Diagonal Field of View over 90°
- Dual global shutter sensors for up to 90 FPS depth streaming
- Range 0.2m to over 10m (Varies with lighting conditions)

§ §

2 Introduction

2.1 Purpose and Scope of this Document

This document captures the specifications and the design–in details for the Intel® RealSense™ D400 series family of products. This document provides information necessary to understand and implement an Intel® RealSense™ D400 series based camera system.

Note: Intel® RealSense™ D400 series is alternately referred as "D4 Camera System" in this document. Intel® RealSense™ Vision Processor D4 is alternately referred as "D4" in this document.

2.2 Terminology

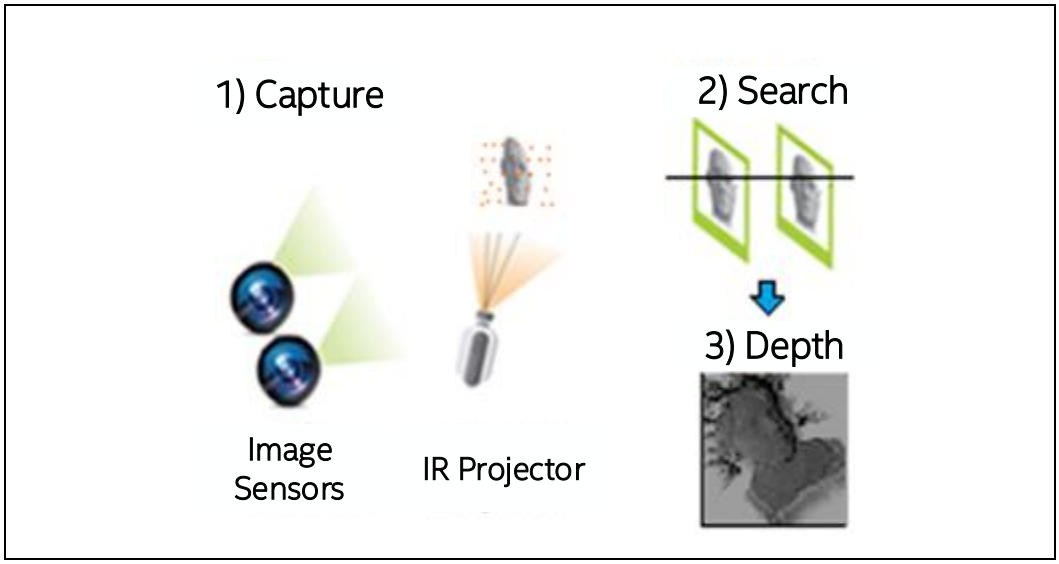
Term	Description
6DOF	Six degrees of freedom (6DoF) refers to the freedom of movement of a rigid body in three-dimensional space. Forward/back, up/down, left/right, pitch, yaw, roll
Stereo Depth Baseline	The distance between the center of the left and right imagers in a stereo camera
MIPI CSI-2	The Camera Serial Interface (CSI) is a specification of the Mobile Industry Processor Interface (MIPI) Alliance and CSI-2 is the 2nd generation specification defining the interface between a camera and a host processor
Depth	Depth video streams are like color video streams except each pixel has a value representing the distance away from the camera instead of color information
D4 (DS5)	If the term D4 is used alone, it refers to the entire D4 camera system consisting of various modules and components. If the term D4 is used with an appropriate qualifier (i.e. D4 Vision Processor, D4 Vision Processor Board), it refers to the specific module or component within the D4 camera system.
FOV	Field Of View (FOV) describes the angular extent of a given scene that is imaged by a camera. A camera's FOV can be measured horizontally, vertically, or diagonally
Host System	Computer or SOC connected to D4 camera
I2C	I²C (Inter-Integrated Circuit), pronounced I-squared-C, is a multi-master, multi-slave, single-ended, serial computer bus invented by Philips Semiconductor (now NXP Semiconductors). It is typically used to allow easy control and data communication between components.
IR Projector	This refers to the source of infrared (IR) light used for illuminating a scene, object, or person to collect depth data.

Term	Description
Imagers	Depth camera system uses a pair of cameras referred as imagers to calculate depth. They are identical cameras configured with identical settings.
Image Signal Processor (ISP)	Image processing functions to enhance color image quality
Left imager	From the perspective of the stereo camera looking out at the world, the left imager is on the left side of the camera module. Thus, when the user is facing the D4 camera, the left imager is actually on the right side of the camera module.
Lens	This refers to the optical component of an imager in the D4 camera. Its purpose is to focus the incoming light rays onto the CMOS chip in the imager.
MIPI	MIPI (Mobile Industry Processor Interface) is a global, open membership organization that develops interface specifications for the mobile ecosystem
Platform camera	This refers to the two-dimensional (2D) color camera on platform
System On Chip (SoC)	Integrated circuit (IC) that integrates all components of a computer
Stereo Depth Module	This refers to a stiffened module containing at least two imagers. The distance between the imagers, which is referred to as the baseline or intraocular spacing, is typically in the range of 20 mm to 70 mm.
Stereo camera	This refers to a pair of imagers looking at the same subject from slightly different perspectives. The difference in the perspectives is used to generate a depth map by calculating a numeric value for the distance from the imagers to every point in the scene.
SKU	Stock Keeping Unit (SKU) is a unique identifier for distinct products. It is often used in the scope of naming different versions of a device
TBD	To Be Determined. In the context of this document, information will be available in a later revision.

2.3 Stereo Vision Depth Technology Overview

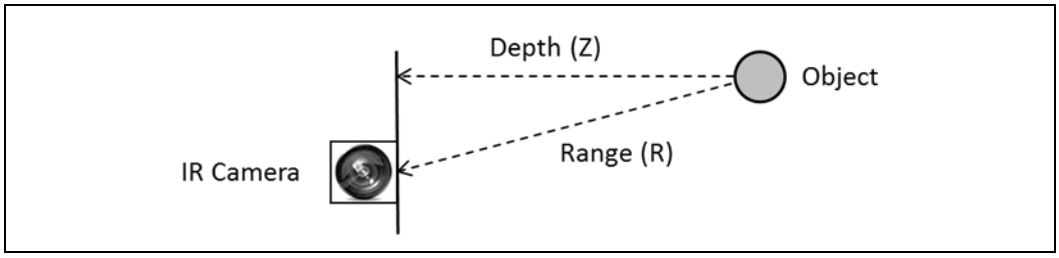
The Intel® RealSense™ D400 series depth camera uses stereo vision to calculate depth. The stereo vision implementation consists of a left imager, right imager, and an optional infrared projector. The infrared projector projects non-visible static IR pattern to improve depth accuracy in scenes with low texture. The left and right imagers capture the scene and sends imager data to the depth imaging (vision) processor, which calculates depth values for each pixel in the image by correlating points on the left image to the right image and via shift between a point on the Left image and the Right image. The depth pixel values are processed to generate a depth frame. Subsequent depth frames create a depth video stream.

Figure 2-1. Active Infrared (IR) Stereo Vision Technology



The depth pixel value is a measurement from the parallel plane of the imagers and not the absolute range as illustrated.

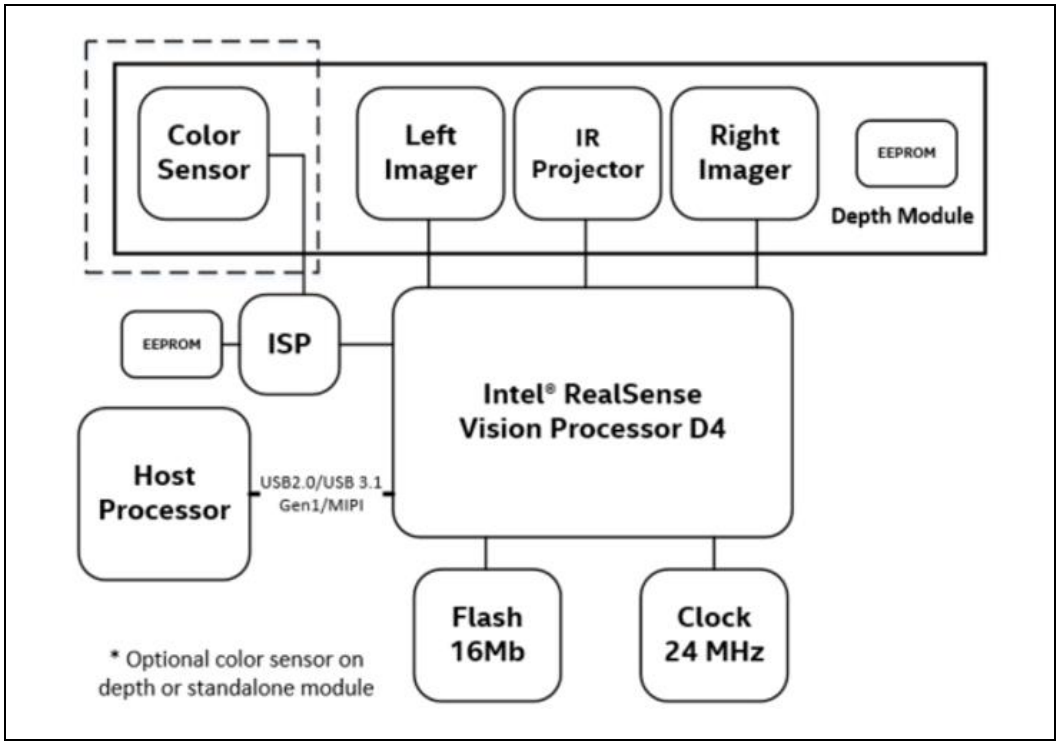
Figure 2-2. Depth Measurement (Z) versus Range (R)



2.4 Camera System Block Diagram

The camera system has two main components, Vision processor D4 and Depth module. The Vision processor D4 is either on the host processor motherboard or on a discrete board with either USB2.0/USB 3.1 Gen1 or MIPI connection to the host processor. The Depth module incorporates left and right imagers for stereo vision with the optional IR projector and RGB color sensor. The RGB color sensor data is sent to vision processor D4 via the color Image Signal Processor (ISP) on Host Processor motherboard or D4 Board.

Figure 2-3. Vision Processor D4 Camera System Block Diagram



2.5 Intel® RealSense™ Depth Module D400 series Product SKUs

Table below describes main components that make up the different depth module SKUs

Table 2-1. Depth Module Product SKU Descriptions

Component	Subcomponent	D400	D410	D415	D420	D430
Intel® RealSense™ Vision Processor D4	-	√	√	√	√	√

3 Component Specification

3.1 Vision Processor D4 Camera System Components

Table 3-1. Component Descriptions

Component	Description
Host Processor	Host Processor that receives Depth and other data streams from Vision Processor D4
Vision Processor D4 (DS5 ASIC)	Depth Imaging Processor with USB 2.0/USB 3.1 Gen 1 or MIPI interface connection to Host Processor
Clock	24MHz clock source for Vision Processor D4
Serial Flash Memory	SPI 16Mb Serial Flash memory for firmware storage
Stereo Depth Module	Camera module with left and Right Imager, Color Sensor†, IR projector† enclosed in a stiffener
Power Delivery	Circuitry on motherboard/Vision processor D4 Board to deliver and manage power to Vision Processor D4 and Stereo Depth Module.
Stereo Depth Connector and Interposer	50 pin connector on motherboard/Vision Processor D4 Board and Stereo Depth module with interposer for connection

(†) SKU dependent

3.2 Host Processor

The host processor interface to Vision Processor D4 is either USB 2.0/USB 3.1 Gen 1 or MIPI. To ensure the best of quality of service, the Vision Processor D4 must be connected to a dedicated USB 3.1 Gen 1 root port within the host processor system.

3.3 Intel® RealSense™ Vision Processor D4

The primary function of Vision Processor D4 is to perform depth stereo vision processing. The Vision Processor D4 on Host Processor motherboard or on Vision Processor D4 Board communicates to the host processor through USB2.0/USB 3.1 Gen 1 or MIPI and receives sensor data from stereo depth module. The Vision Processor D4 supports MIPI CSI-2 channels for connection to image sensors.

3.3.1 Vision Processor D4 Features

- 28nm Process Technology.

- 5 MIPI camera ports with each MIPI lane capable of handling data transfers of up to 750 Mbps.
- USB2.0/USB 3.1 Gen 1 or MIPI interface to host system.
- Image rectification for camera optics and alignment compensation
- IR Projector (Laser) controls
- Serial Peripheral Interface for fast data transfer with external SPI flash.
- Integrated I2C ports
- General purpose Input Output pins
- Active power gating

3.3.2 Vision Processor D4 Signal Description

Table 3-2. Vision Processor D4 Signal Descriptions

RESERVED – Signal reserved for future usage

IO Type- Input Output Buffer type

A – Analog

I – Input

O - Output

Signal Name	Description	IO Type	After RESET
Host MIPI			
H_DATAP0 H_DATAN0	Host MIPI Data Lane 0 Differential Pair	A	I
H_DATAP1 H_DATAN1	Host MIPI Data Lane 1 Differential Pair	A	I
H_DATAP2 H_DATAN2	Host MIPI Data Lane 2 Differential Pair	A	I

Table 3-3. Hardware Straps

Pin	Boot Load	HW/FW	Description
EPGPIO0	No	FW	USB connection type: 0: Peripheral (default) 1: Integrated
EGPIO4	Yes	HW	SPI Interface: 0: SPI on "Z" 1: SPI connected (default)
EPGPIO7 EPGPIO8	Yes	FW	Flash 00: 64Mbit 01: 8Mbit 10: 16 Mbit (default) 11: 32 Mbit
EPGPIO9	No	FW	Host interface: 0: USB (default) 1: MIPI
EPGPIO10	No	FW	Board version [0] (default: 0)
EPGPIO11	No	FW	Board version [1] (default: 0)
EPGPIO12	No	FW	Board version [2] (default: 0)
DFU	Yes	HW	Go to DFU 0: Disabled (default) 1: Go to DFU mode (Recovery)

NOTES:

- Boot Load – Read during Boot
- Hardware (HW) Strap – External hardware pin state directly configures D4 functionality
- Firmware (FW) Strap – External hardware pin state is read by firmware and firmware configures D4 functionality

3.3.3 Vision Processor D4 Package Mechanical Attributes

Table below provides an overview of the mechanical attributes of the package.

Table 3-4. Vision Processor D4 Package Mechanical Attributes

Pin	Boot Load	HW/FW
Package Technology	Package Type	FlipChip CSP (Chip Scale Package)
	Interconnect	Ball Grid Array (BGA) Ball
	Lead Free	Yes
	Halogenated Flame Retardant Free	Yes
Package Configuration	Solder Ball Composition	SAC125Ni
	Ball/Pin Count	225 solder balls
	Grid Array Pattern	15 x 15
Package Dimensions	Nominal Package Size (mm)	6.40 x 6.40
	Min Ball/Pin pitch (mm)	0.42
Weight		~1 gm

3.3.4 Vision Processor D4 Power Requirements

The Vision Processor D4 requires the following power supplies for operation.

Table 3-6. Vision Processor D4 Power Requirements

Voltage Ball Name	Min. (V)	Nominal (V)	Max. (V)	Peak Current (Icc)
VDD	0.85	0.9	0.95	0.4A
VDD_PG	0.85	0.9	0.95	1.6A
USB_DVDD	0.81	0.9	0.99	0.2A
VPTX0	0.81	0.9	0.99	0.2A
VP	0.81	0.9	0.99	0.2A
*AVDD	1.71	1.8	1.89	0.2A
VDDPLL	0.85	0.9	0.95	0.2A
VDDTS	1.71	1.8	1.89	0.2A
VDDPST18 (Left and Right)	1.71	1.8	1.89	0.2A
USB_VDD330	3.13	3.3	3.46	0.2A

3.3.5 Vision Processor D4 Power Sequencing

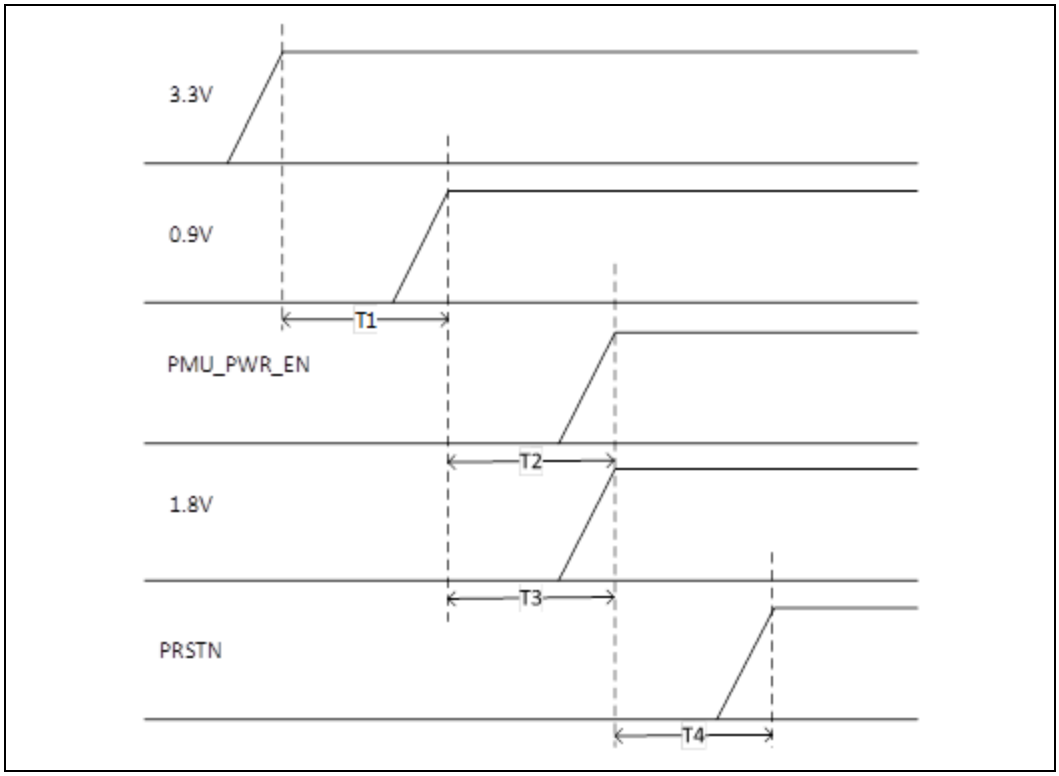
The timing requirement for power sequencing is listed below and shown in the following figure.

- Hold Vision Processor D4 in reset
- Ramp up power in the 3.3V
- Ramp up power in the 0.9V
- Ramp up power in the 1.8V
- Release Vision Processor D4 Reset

Table 3-7. Vision Processor D4 Power Sequencing Timing Parameters

Parameter	Value	Units	Label
0.9V stable to 3.3V stable	>=50	us	T1
PMU_PWR_EN to 0.9V Stable	>=50	us	T2
1.8V stable to 0.9V Stable	>=50	us	T3
PRSTN (D4 RESET) assertion to 1.8V stable	15	us	T4

Figure 3-3. Vision Processor D4 Power Sequencing



Note: Vision Processor D4 has no specific power down sequence requirement.

3.3.6 Vision Processor D4 Spec Code

The spec code is an identification mark printed on Vision Processor D4.

Table 3-8. Vision Processor D4 SPEC Code

Vision Processor D4	SPEC CODE
Production (Shipped in Tape and Reel)	SLLY5
Production (Shipped in Tray)	SLM6B

3.3.7 Vision Processor D4 Storage and Operating Conditions

Table 3-9. Vision Processor D4 Storage and Operating Conditions

Condition	Description	Min	Max	Unit
Storage (Still Air), Not Operating	Temperature (Sustained, Controlled)(1)	0	40	°C

	Temperature (Short Exposure)(2)	-40	70	°C
	Humidity	Temperature/ RH: 40°C / 90%		
Component Case Temperature(3)	Temperature	0	110	°C

NOTE:
(1) Controlled conditions should be used for long term storage of product.
(2) Short exposure represents temporary max limits acceptable for transportation conditions.
(3) Component case temperature limits must be met for all operating temperatures.

3.3.8 Vision Processor D4 Thermals

The thermal design should be such that Vision Processor D4 does not exceed component case temperature limit. Care must also be taken to make sure that the Vision Processor D4 heat is not transferred to other components of the imaging system or stereo depth module. It will be best to thermally isolate Vision Processor D4 from the stereo depth module.

3.4 Clock

Vision Processor D4 requires a single 24 MHz clock oscillator. All clocks required by stereo depth module are generated by Vision Processor D4.

3.5 Serial (SPI) Flash Memory

Vision Processor D4 requires 16Mbit Serial Flash Memory for its firmware storage. The recommended part number is IS25WP016 (www.issi.com) or equivalent

3.6 Stereo Depth Module

The stereo depth module components are described in Table 3-10. The stereo depth printed circuit board and components are encapsulated in a common metal stiffener.

Table 3-10. Stereo Depth Module

Component	Description
Left and Right Imagers	2 HD image sensors
Infrared (IR) Projector	Class 1 laser compliant (optional)
Color Sensor	1080p RGB image sensor (optional)
Depth Module Connector	50 pin connector plug
Privacy LED	Indicator when stereo module is streaming data (optional)
Stiffener	Reinforcement housing to keep imagers aligned
Label	Manufacture and product identifier information

Other Components	Laser Driver, EEPROM, Voltage Regulators, etc.

Figure 3-4. Stereo Depth Module (Intel® RealSense™ Depth Module D410)

3.6.1 Left and Right Imagers

The stereo depth module has two camera sensors referred here as imagers, they are identical parts and are configured with identical settings. The imagers are labeled "left" and "right" from the perspective of the camera module looking outward. The stereo imager pairs are referred as Standard or Wide based on imager field of view.

Table 3-12. Standard Left and Right Imager Properties

Parameter	Camera Sensor Properties
Image Sensor	OmniVision OV2740
Active Pixels	1920 × 1080
Sensor Aspect Ratio	16:9
Format	10-bit RAW
F Number	f/2.0
Focal Length	1.88mm
Filter Type	IR Cut – D400, None – D410, D415, Camera D415
Focus	Fixed
Shutter Type	Rolling Shutter
Signal Interface	MIPI CSI-2, 2X Lanes
Horizontal Field of View	69.4°
Vertical Field of View	42.5°
Diagonal Field of View	77°
Distortion	<=1.5%

Table 3-13. Wide Left and Right Imager Properties

Parameter	Camera Sensor Properties
Image Sensor	OmniVision OV9282
Active Pixels	1280 X 800
Sensor Aspect Ratio	8:5
Format	10-bit RAW
F Number	f/2.0
Focal Length	1.93mm
Filter Type	IR Cut – D420, None – D430, D435
Focus	Fixed
Shutter Type	Global Shutter

Parameter	Camera Sensor Properties
Signal Interface	MIPI CSI-2, 2X Lanes
Horizontal Field of View	91.2°
Vertical Field of View	65.5°
Diagonal Field of View	100.6°
Distortion	<=1.5%

3.6.2 Infrared Projector

The infrared projector improves the ability of the stereo camera system to determine depth by projecting a static infrared pattern on the scene to increase texture on low texture scenes. The infrared projector meets class 1 laser safety under normal operation. The power delivery and laser safety circuits are on the stereo depth module. The infrared projector is referred as Standard or Wide based on field of projection.

Table 3-14. Standard Infrared Projector Parameters

Parameter	Properties
Projector	Infrared
Pattern Type	Static
Illuminating Component	Vertical-cavity surface-emitting laser (VCSEL) + Optics
Laser Controller	PWM
Optical Power	360mW average, 440mW peak
Laser Wavelength	850nm ± 10 nm nominal @ 20°C
Laser Compliance	Class 1, IEC 60825-1:2007 Edition 2, IEC 60825-1:2014 Edition 3
Horizontal Field of Projection	80°
Vertical Field of Projection	55°
Diagonal Field of Projection	89.3°

Table 3-15. Wide Infrared Projector Parameters

Parameter	Properties
Projector	Infrared
Pattern Type	Static
Illuminating Component	Vertical-cavity surface-emitting laser (VCSEL) + optics
Laser Controller	PWM
Optical Power	360mW average, 4.25W peak
Laser Wavelength	850nm ± 10 nm nominal @ 20°C

Parameter	Properties
Laser Compliance	Class 1, IEC 60825-1:2007 Edition 2, IEC 60825-1:2014 Edition 3
Horizontal Field of Projection	100.4°
Vertical Field of Projection	69°
Diagonal Field of Projection	110.4°

3.6.3 Color Sensor

The color sensor on the stereo depth module in addition to color image provides texture information. Usages for the texture information include overlay on a depth image to create a color point cloud and overlay on a 3d model for reconstruction.

Table 3-16. Color Sensor Properties

Parameter	Camera Sensor Properties
Image Sensor	OmniVision OV2740
Color Image Signal Processor	Discrete
Active Pixels	1920 X 1080
Sensor Aspect Ratio	16:9
Format	10-bit RAW RGB
F Number	f/2.0
Focal Length	1.88mm
Filter Type	IR Cut Filter
Focus	Fixed
Shutter Type	Rolling Shutter
Signal Interface	MIPI CSI-2, 1 Lane
Horizontal Field of View	69.4°
Vertical Field of View	42.5°
Diagonal Field of View	77°
Distortion	<=1.5%

3.6.4 Depth Module Connector

The depth module connector provides signal and power interface to the stereo depth module. The connector on stereo depth module is a 50-pin connector plug.

Table 3-17. Depth Module 50-pin Connector Plug Details

3.6.6 Stiffener

The stiffener maintains the precise alignment of the camera sensors and assists in subassembly rigidity. The stiffener consists of a bottom and a top plate. The stiffener is of stainless steel grade AISI 304.

3.6.7 Temperature Sensor

The stereo depth module is equipped with a thermal sensor that is used for laser safety control (IR Projector). The RealSense library provides access to the thermal sensor but it is not intended to be used by applications outside of development environments.

3.6.8 Other Stereo Depth Module Components

Table 3-21. Other Stereo Depth Module Components

Component	Description
Laser (IR Projector) Driver	The depth module implements a laser driver which controls the infrared laser within the infrared projector system.
Laser (IR projector) Thermal Control	The depth module implements a laser safety control circuit that adjusts laser drive output. When laser power and depth streaming is enabled and if stereo depth module temperature is >60°, laser power is halved. If temperature is not lowered below temperature limit within a certain interval, the laser is shut off.
EEPROM	The depth module implements flash memory for storing the calibration data.
Fork/Screw Mount	Secure placement and mounting to system/chassis/heat sink
Voltage Regulators	The stereo depth module implements DC to DC voltage converters

3.7.5 USB Peripheral Connector – Type-C

USB Type-C connector consists of 24 signal pins designed in a symmetrical way. The connector z height is as low as 3mm and enables enhanced user experience by allowing the USB Type-C plug to be plugged into a receptacle either right side up or upside down. Interoperability between USB Type-C and legacy USB is possible through standard legacy cable assemblies defined in USB Type-C Cable and Connector specification.

Figure 3-12. USB Type-C Receptacle Pin Map

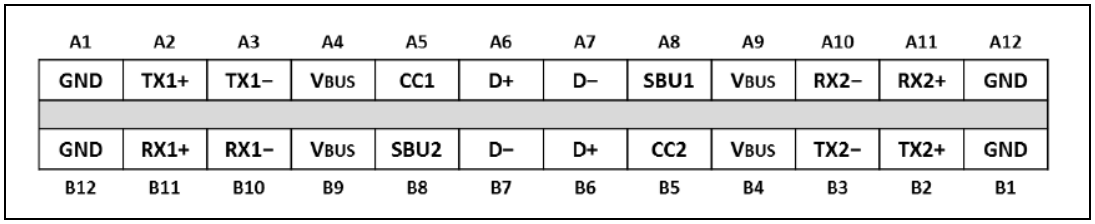

Table 3-35. USB Peripheral Connector Pin List

Pin	Signal	Function	Description
A1	GND	Power Delivery	Ground

B12	GND	Power Delivery	Ground

3.7.6 Color Image Signal Processor (ISP)

The color sensor data is sent to discrete Image Signal Processor (ISP) on the Vision processor D4 Board for image adjustments, image scaling and processing functions to

help compensate for inherent inaccuracy in lens and sensor in providing a better image quality. The processed color image is sent to the Vision Processor D4.

Table 3-36. ISP Properties

Parameter	ISP Properties
ISP Part Number on Vision Processor D4 Board	RTS5845
1M-bit Serial Flash for ISP	Winbond* W25X10CL or equivalent
Interface To Vision Processor D4	MIPI CSI-2, 2X Lanes
Interface To RGB Sensor	MIPI CSI-2, 1X Lane

3.7.7 Vision Processor D4 Board Power Requirements

The Vision Processor D4 Board is powered through VBUS power of the USB connector. The Vision Processor D4 Board in turn power sources the stereo depth module.

Table 3-37. Vision Processor D4 Board Power Requirements

Parameter		Min	Nom	Max	Unit
VCC	Supply Voltage	4.75	5V	5.25V	V
ICC	Supply Current			700	mA
	Supply Voltage Ramp Rate	0.5		5	ms

3.7.8 Vision Processor D4 Board Thermals

The Vision Processor D4 Board should be screw mounted on to a heat sink or a heat dissipating structure element using screw forks on Board. Thermal conductive tape (electrically non-conductive) should cover the entire back side area (non-component side) of the ASIC Board for thermal transfer onto heat sink or heat dissipating structure element.

3.7.9 Vision Processor D4 Board Storage and Operating Conditions

Table 3-38. Vision Processor D4 Board Storage and Operating Conditions

Condition	Description	Min	Max	Unit
Storage (Still Air), Not Operating	Temperature (Sustained, Controlled)(1)	0	40	ºC
	Temperature (Short Exposure)(2)	-40	70	ºC
	Humidity	Temperature/ RH: 40ºC / 90%		
Case Temperature (3)(4)(5)	Temperature	0	50	ºC

NOTE:
(1) Controlled conditions should be used for long term storage of product.
(2) Short exposure represents temporary max limits acceptable for transportation conditions.
(3) Case temperature limits must be met for all operating temperatures.
(4) Case temperature is specified for the overall Vision Processor D4 Board
(5) Case temperature 0° minimum and lower temperatures is non-condensing

4.2 Vision Processor D4 Data Streams

Intel® RealSense™ Vision Processor D4 Depth imaging system provides high quality depth data to a host system. The depth data is generated with stereo vision technology that is optionally assisted by an infrared projector. The imaging system has the ability to syncronize with color stream.

Table 4-2. Image Formats (USB 3.1 Gen1)

Format	Resolution	Frame Rate (FPS)	Comment

NOTE:

Depth and Color are mapped as separated interfaces. Each one of the interfaces is working independent with the other interface (Virtual channel in MIPI and End Point in USB).

Table 4-4. Simultaneous Image Streams (USB 3.1 Gen1 & USB2.0)

Depth	Imager	Color (Left Imager) D400/D410	Color (RGB Camera) D415/D435	Comment
Z16	Y8			
Z16		UYVY		
Z16	Y8		YUV2	
Z16			YUV2	

NOTE:

1. RGB to depth hardware sync is only supported with the same frame rate for all streams.
2. For Depth and RGB camera simultaneous streaming, it is recommended to have color resolution to be the same or higher than depth resolution.
3. USB 3.1 Gen1 supports all resolution/frame rate combinations in a typical dedicated USB port configuration. On a USB hub with other devices (e.g. other RealSense cameras), considerations regarding bandwidth requirements have to be taken.
4. USB 2.0 supports a subset of the resolution/frame rate combinations given the bandwidth requirements.
    - Max. Depth Resolution Simultaneous Stream Configuration with Depth at 640X480, 15 FPS, Imager at 640X480, 15 FPS and RGB Camera at 640X480, 30 FPS.
    - Max. Depth Frame Rate Simultaneous Stream Configuration with Depth at 480X270, 60 FPS, Imager at 480X270, 60 FPS and RGB Camera at 424x240, 30 FPS

4.3 Depth Field of View (FOV)

The depth field of view is the common overlap of the individual left and right Imager field of view for which Vision Processor D4 provides depth data

Table 4-5. Depth Field of View

Format	D400/D410/D415	D420/D430/D435
Horizontal FOV (VGA 4:3)	48	74
Vertical FOV (VGA 4:3)	40	62
Diagonal FOV (4:3)	60	88

Horizontal FOV (HD 16:9)	64	86
Vertical FOV (HD 16:9)	41	57
Diagonal FOV (HD 16:9)	72	94

NOTE:

- Due to mechanical tolerances of +/-5%, Max and Min FOV values can vary from lens to lens and module to module by ~ +/- 3 degrees.

4.4 Minimum-Z Depth

The Minimum-Z Depth is the minimum distance from depth camera to scene for which Vision Processor D4 provides depth data.

Table 4-6. Minimum-Z Depth

Resolution	D400/D410/D415	D420/D430
	Min-Z (mm)	Min-Z (mm)
1280x720	450	280
848X480	310	195
640x480	310	175
640x360	240	150
480x270	180	120
424x240	160	105

4.5 Depth Quality Specification

Table 4-7. Depth Quality Specification

Metric	D400/D410/D415 (up to 2 Meters and 80% FOV)	D420/D430/D435 (up to 2 Meters and 80% FOV)
Z-accuracy (or absolute error)	≤ 2%	≤ 2%
Fill rate	≥ 99%	≥ 99%
RMS Error (or Spatial Noise)	≤ 2%	≤ 2%
Temporal Noise (Pixel)	≤ 0.5%	≤0.5%

NOTES:

1) The Depth Quality spec applies to calibrated depth modules and depth cameras.

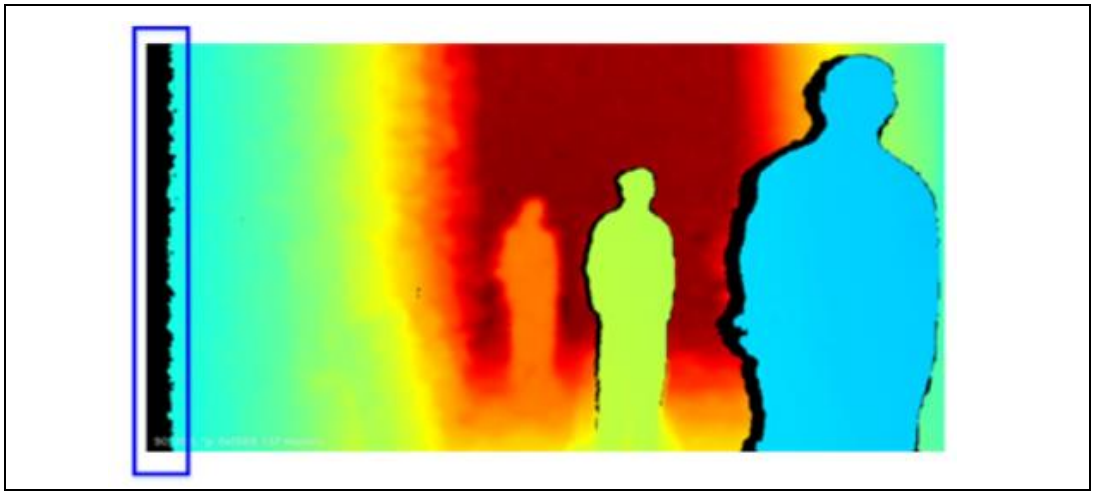
2) For Depth Quality metric definitions and test methodology, refer to white paper "Intel® RealSense™ Camera Depth Testing Methodology"

3) Laser Power: 150mW, Exposure: Auto Exposure

4.6 Invalid Depth Band

The depth data generated with stereo vision uses the left imager as the reference for stereo matching resulting in a non-overlap region in the field of view of left and right imager where we will not have depth data at the left edge of the frame. Closer scenes result in a wider invalid depth band than scenes at further distances.

Figure 4-1. Left Invalid Depth Band



The width of the invalid depth band can be calculated using the following formula:
In terms of horizontal FOV
DBR (ratio of Invalid depth band to total horizontal image) = B/[2*Z*tan(HFOV/2)];
Invalid Depth Band (in pixels) = HRes*DBR

In terms of focal length
DBR = B*F/[Z*HRes]
Invalid Depth Band = B*F/Z

B= baseline
Z= distance
F= focal length
HFOV= horizontal depth FOV
HRes = horizontal resolution

4.7 Depth Start Point (Ground Zero Reference)

The depth start point or the ground zero reference can be described as the starting point or plane where depth = 0. For depth modules (D400, D410 & D415), this point is referenced from front of lens or from backside of module. For depth cameras (D415 and D435), this point is referenced from front of camera cover glass

Figure 4-2. Depth Module Depth Start Point Reference

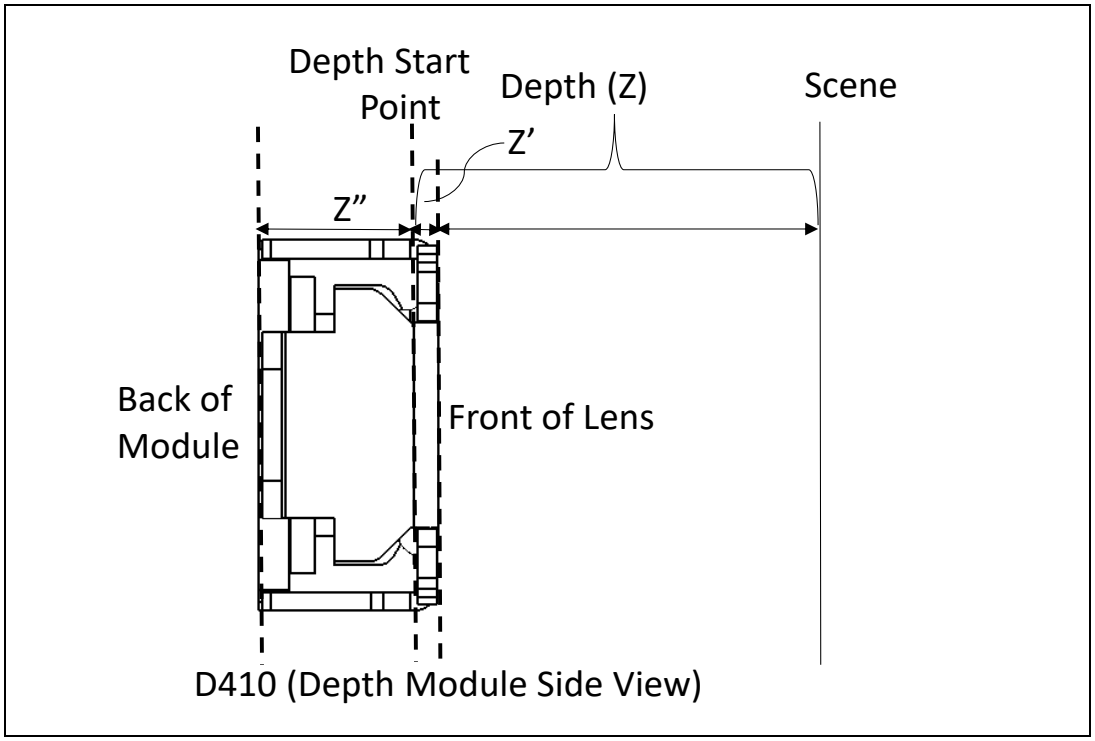


Table 4-8. Depth Module Depth Start Point

Depth Module	Front of Lens (Z')	Back of Module (Z")
D400/D410/D415	-0.1mm	4.3mm
D420/D430	-3.2mm	7.5mm

NOTES:

If depth measurement reference is front of lens, then |Z'| should be added to measured value to determine Ground Truth. If depth measurement reference is back of module, then |Z"| should be subtracted to determine Ground Truth.

Figure 4-3. Depth Camera Depth Start Point Reference

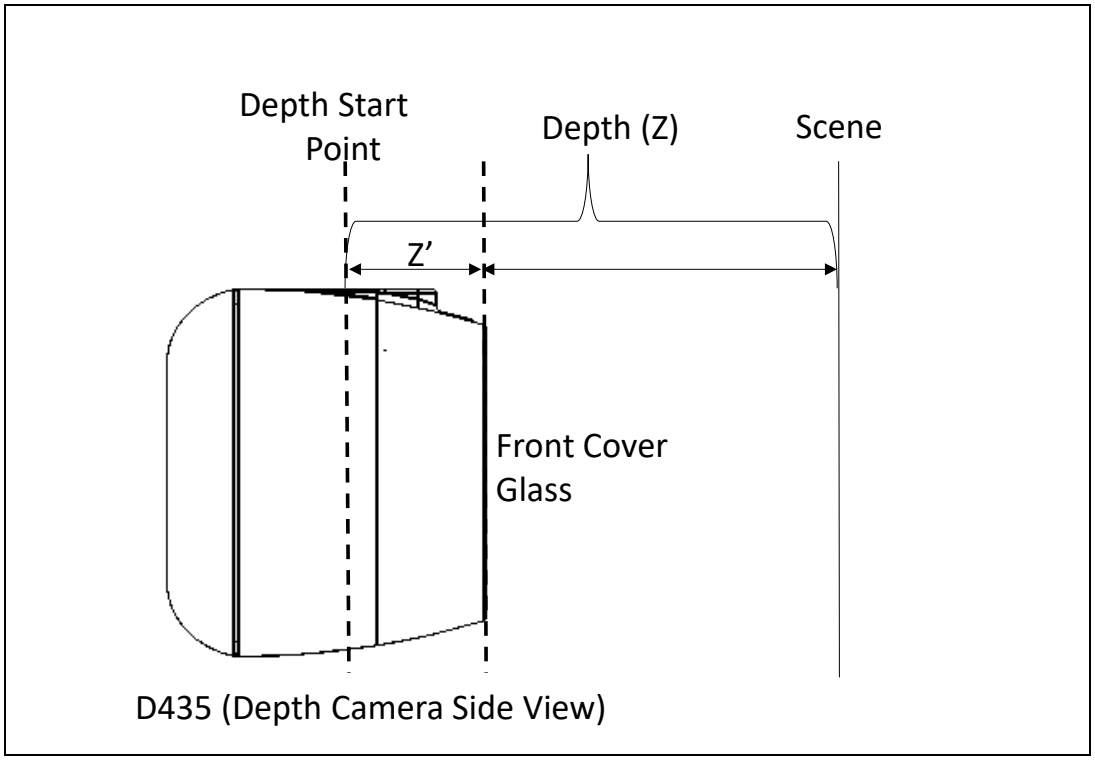

Table 4-9. Depth Cameras Depth Start Point

Depth Camera	Camera Front Glass (Z')
D415	-1.1mm
D435	-4.2mm

NOTES:

If depth measurement reference is front cover glass, then |Z'| should be added to measured value to determine Ground Truth.

4.7.1 Depth Origin X-Y Coordinates

The depth origin X-Y coordinates is the X-Y center of left imager.

Figure 4-4. Depth Module X-Y Depth Origin Reference

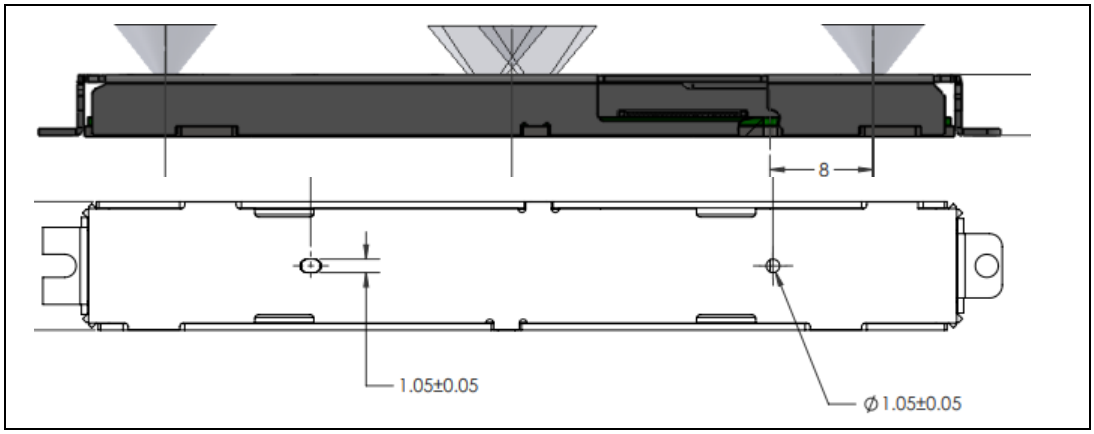

Table 4-10. Depth Module X-Y Depth Origin Coordinates

Depth Module	Left Alignment hole[1] to Left imager Center
D400	8mm
D410	8mm
D415	8mm
D420	8mm
D430	8mm

NOTES:

1. Left alignment hole on bottom stiffener of depth module
2. Left alignment hole and left imager center is on depth module centerline.

Figure 4-5. Depth Camera X-Y Depth Origin Reference

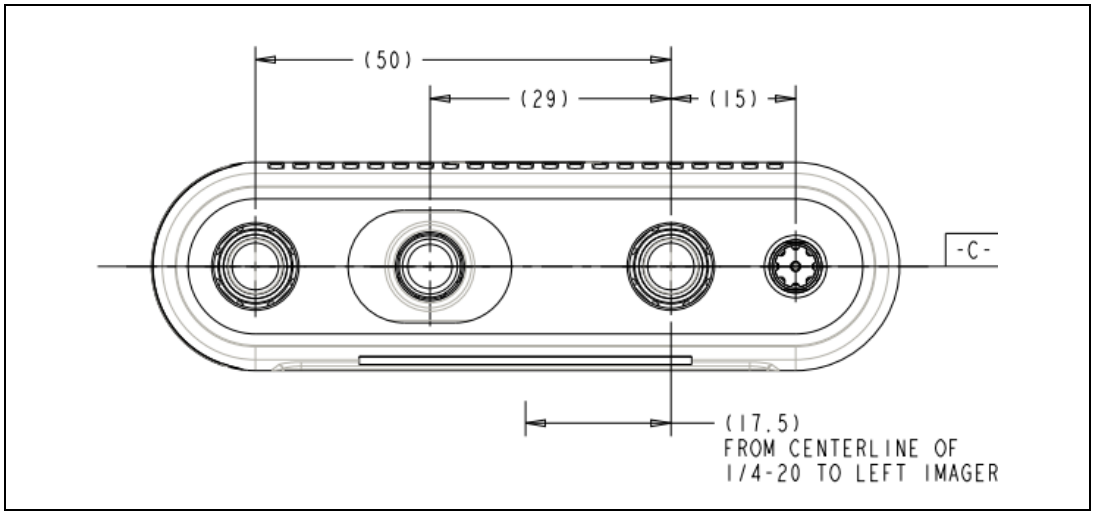

Table 4-11. Depth Camera X-Y Depth Origin Coordinates

Depth Camera	From Centerline of ¼-20[1] To Left Imager
D415	20mm
D435	17.5mm

NOTES:

1. Center of tripod mounting hole (1/4-20)

4.8 Depth Camera Functions

D4 exposes the following Depth image settings.

Table 4-12. Depth Camera Controls

Control	Description	Min	Max
Manual Exposure(1) (ms)	Control sensor exposure period (400/410)	1	166
Manual Exposure(1) (ms)	Control sensor exposure period (430)	1	166
Manual gain(1) (Gain 1.0 = 16)	Control sensor digital gain.	16	248
Laser Power (on/off) (On = 1)	Power to IR Projector	0	1
Manual Laser Power (mW)	Laser Power setting (30mW steps)	0	360

Control	Description	Min	Max
Auto Exposure Mode (Enable = 1)	Auto Exposure Mode. When Auto Exposure is enabled, Exposure and Gain are set based on the environment condition	0	1
Auto Exposure ROI	Perform Auto Exposure on a selected ROI	T-0 L-0 B-1 R-1	T-719 L-1279 B-720 R-1280
Preset	Set Controls parameters based on Camera Usage		
Meta Data Control	Enable/Disable Metadata	0	1

NOTES:

(1) – Not supported in Auto Exposure Mode

T - Top, L – Left, B - Bottom, R – Right

4.9 Color Camera Functions

Table 4-13. RGB Exposed Controls

Control	Description	Min	Max
Auto-Exposure Mode	Automatically sets the exposure time and gain for the frame.	0x1	0x8
Manual Exposure Time	Sets the absolute exposure time when auto-exposure is disabled.	41	10000
Brightness	Sets the amount of brightness applied when auto-exposure is enabled.	-64	64
Contrast	Sets the amount of contrast based on the brightness of the scene.	0	100
Gain	Sets the amount of gain applied to the frame if auto-exposure is disabled.	0	128
Hue	Sets the amount of hue adjustment applied to the frame.	-180	180
Saturation	Sets the amount of saturation adjustment applied to the frame.	0	100
Sharpness	Sets the amount of sharpening adjustment applied to the frame.	0	100
Gamma	Sets amount of gamma correction applied to the frame.	100	500
White Balance Temperature Control	Sets the white balance when AWB is disabled.	2800	6500

Control	Description	Min	Max
White Balance Temperature Auto (AWB)	Enables or disables the AWB algorithm.	0	1
Power Line Frequency	Specified based on the local power line frequency for flicker avoidance.	0	3
Backlight Compensation	Sets a weighting amount based on brightness to the frame.	0	1
Low Light Comp	Low Light Compensation	0	1

§§

5 Firmware

The firmware contains the operation instructions. Upon runtime, Vision Processor D4 loads the firmware and programs the component registers. If the Vision Processor D4 is configured for update or recovery, the unlocked R/W region of the firmware can be changed.

5.1 Update

During a firmware update, the firmware utility will issue a device firmware update command to the Vision Processor D4. The Vision Processor D4 will then reset into firmware update mode. The firmware utility uses a single binary file to maintain the firmware image. The firmware utility compares the firmware version installed on the camera to the firmware version file to be updated. Based on the comparison, the firmware utility will downgrade, upgrade, or skip if the versions match.

5.1.1 Update Limits

The firmware update engine does not allow infinite update cycles between older and current versions of firmware. The engine will establish a baseline version of firmware based on the latest firmware version installed. The engine will allow a return to a previous version or baseline version of firmware up to 20 times. After the 20th update, the engine will only allow an update to a firmware revision higher than the baseline version.

5.2 Recovery

A read only boot sector is built into firmware which enables basic operation regardless of the integrity of the operation instructions region. This ensures the imaging system can function in the case of firmware not be written properly. When a firmware recovery is required, the firmware utility will communicate with the recovery driver to set the DFU pin low and reset the imaging system in recovery mode.

Firmware Recovery can also be externally triggered by having controllable interrupt connected to the Vision Processor D4 DFU (Device Firmware Update) pin.

The firmware recovery sequence will be triggered by the firmware client utility. This client utility will communicate through ACPI _DSM to trigger the controllable interrupt (GPIO) at the appropriate times. The firmware recovery requires an ACPI _DSM interface to control the interrupt GPIO in configuring to firmware recovery state. The _DSM methods and BIOS use the Write to GPIO functions to set the controllable interrupt.

§ §

6 Software

6.1 Intel® RealSense™ Software Development Kit 2.0

Intel® RealSense™ SDK 2.0 is a cross-platform library for working with Intel® RealSense™ D400 Series. It is open source and available on https://github.com/IntelRealSense/librealsense

The SDK at a minimum includes:

- **Intel® RealSense™ Viewer** - This application can be used view, record and playback depth streams, set camera configurations and other controls.
- **Depth Quality Tool** - This application can be used to test depth quality, including: distance to plane accuracy, Z accuracy, standard deviation of the Z accuracy and fill rate.
- **Debug Tools** - These command line tools gather data and generate logs to assist in debug of camera.
- **Code Examples** - Examples to demonstrate the use of SDK to include D400 Series camera code snippets into applications.
- **Wrappers** -Software wrappers supporting common programming languages and environments such as ROS, Python, Matlab, node.js, LabVIEW, OpenCV, PCL, .NET and more

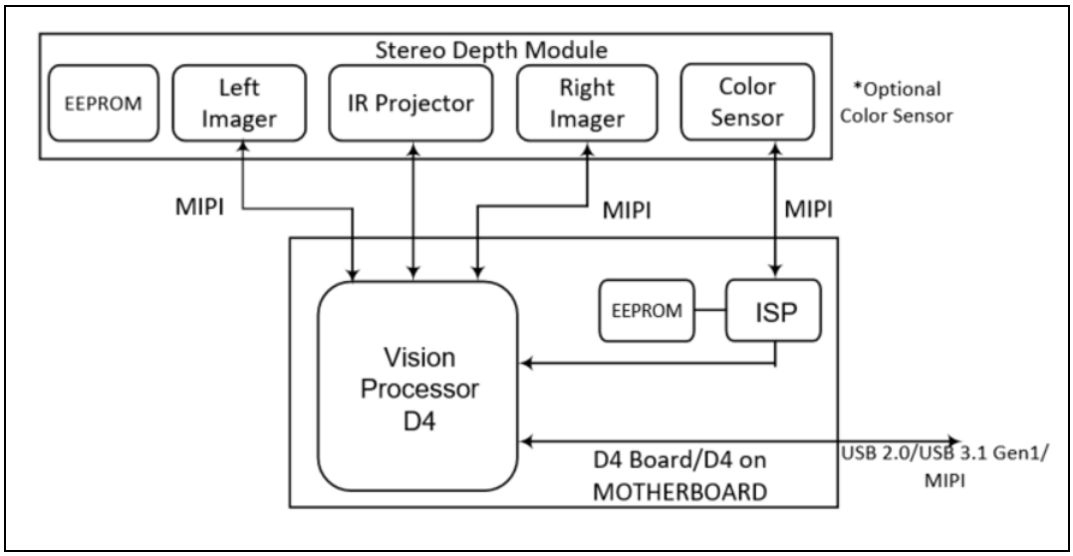
§§

7 System Integration

The small size of the stereo depth module and the separate placement of Vision Processor D4 provides system integrators flexibility to design into a wide range of products. Because the camera uses stereo vision technology, it is crucial that the stereo depth module does not flex throughout its service life. This creates unique mechanical and thermal implementation guidance. This section explains how to correctly integrate D4 depth camera into a system

7.1 System Level Block Diagram

Figure 7-1. System Block Diagram



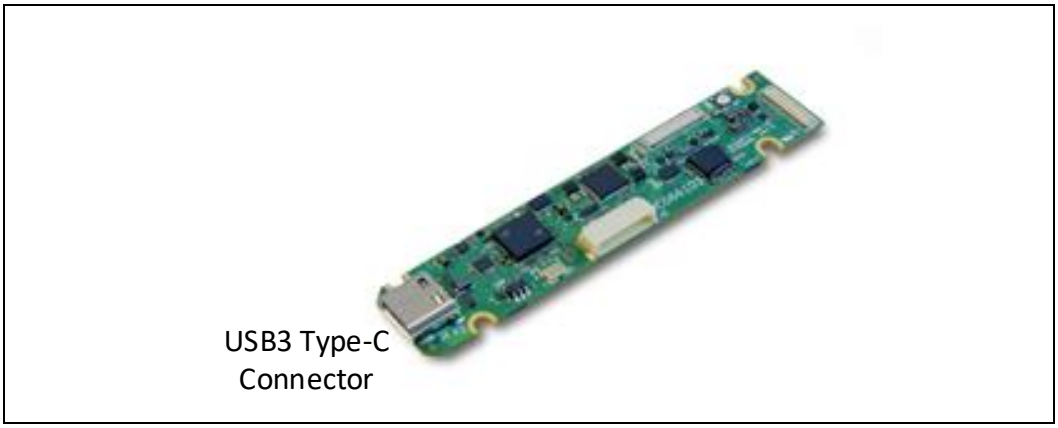
7.2 Vision Processor D4 System Integration

There are two options to integrate Vision Processor D4 into a system, either by integration of Vision Processor D4 Board or having the Vision Processor D4 and support components directly on the host processor motherboard. Vision Processor D4 Board simplifies system design and integration of the D4 depth camera system and Vision Processor D4 on Motherboard allows for a space optimized implementation of the D4 depth camera system.

7.2.1 Vision Processor D4 Board

The Vision Processor D4 Board has a standard USB Type-C connector and requires an appropriate USB Type-C cable to connect to a standard USB 2.0/USB 3.1 Gen 1 external port.

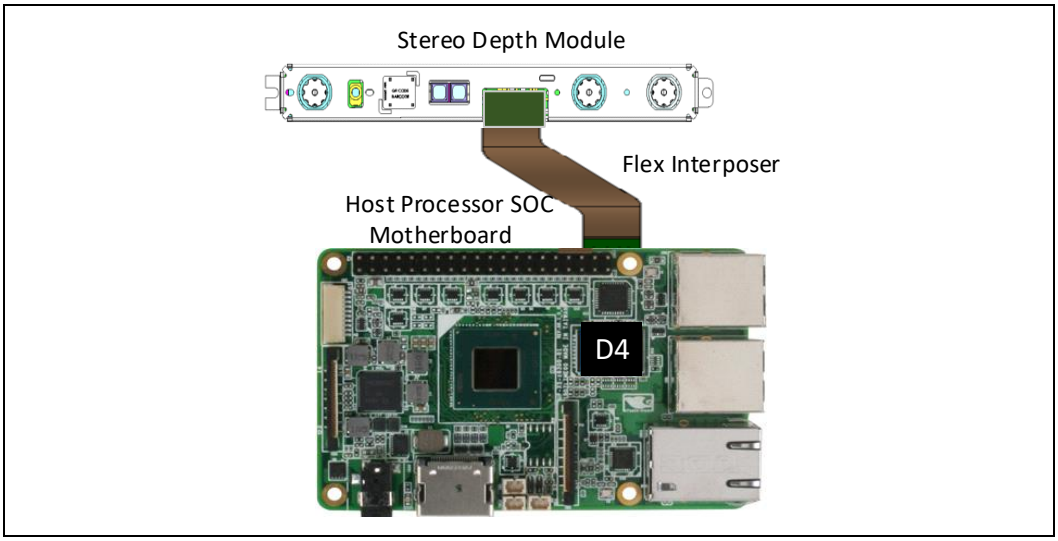
Figure 7-2. Intel® RealSense™ Vision Processor D4 Board



7.2.2 Vision Processor D4 on Motherboard

In the Vision Processor D4 on Motherboard option, Vision Processor D4 and support components are directly placed on the host processor motherboard. The depth module receptacle is on the host processor motherboard for connection to the stereo depth module.

Figure 7-3. Vision Processor D4 on Motherboard (Illustration)



7.2.2.1 Firmware Update

SPI flash chip assembled onto the motherboard requires a bootable firmware image for Vision Processor D4 to boot or to run the firmware update utility provided by Intel.

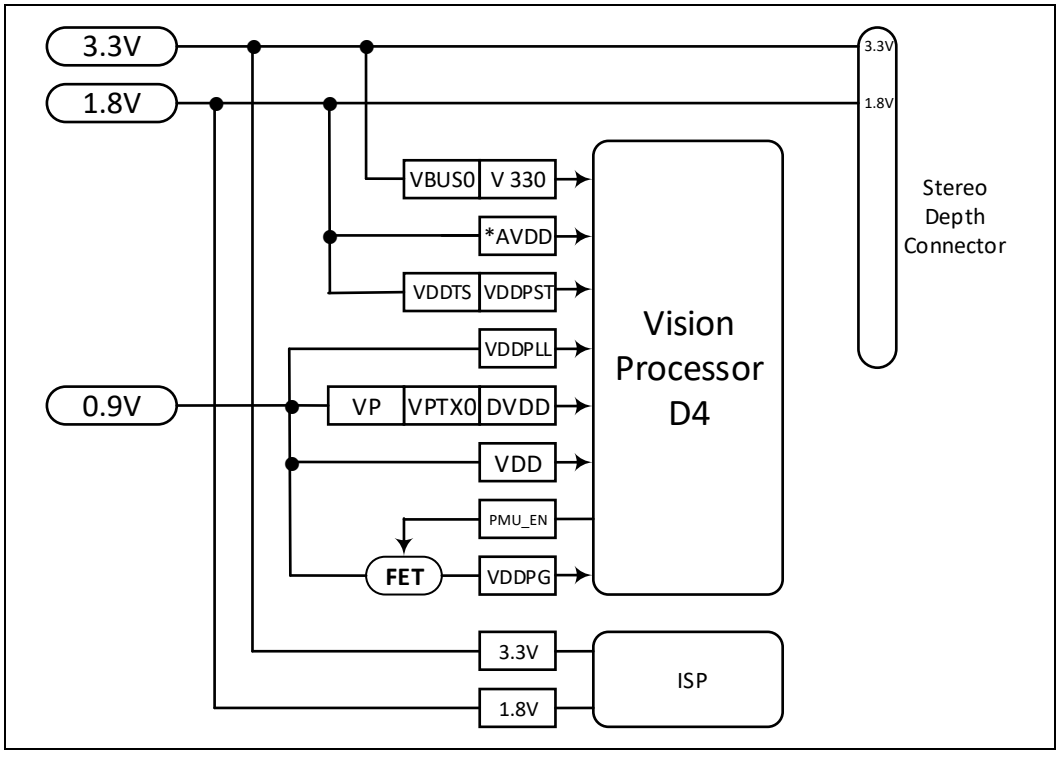
There are two options program flash with firmware image or to recover a corrupt firmware image.

1. Pre-program SPI flash chip with firmware before assembly on to motherboard or replace corrupt image with a good image SPI flash chip. The blank SPI flash chip can pre-programmed using a compatible adapter (i.e. PA8QFN8D) and supporting flash programmer.
2. A header or test points is connected in parallel to the SPI flash chip, then programmed directly with an SPI flash programmer. Vision Processor D4 SPI interface is put in high Z state by strapping EPGPIO4 pin to Ground when programmed directly with an SPI flash programmer.

7.3 D4 Camera System Power Delivery

D4 camera system **MUST** keep stereo depth module and the Vision Processor D4 on the same power rails. The stereo depth module holds a safety region in EEPROM that is configured by firmware protected region. Keeping all components on the same rail prevents malicious software reset of the stereo depth module without causing a reset to the ASIC. By this protection we make sure that all the safety logic is kept locked as long as the device is active. Ensure power delivery implementation recommendation in Chapter 12 are followed in the design of D4 camera system.

Figure 7-4. D4 Camera System Power Scheme



7.4 Vision Processor D4 Board for Integrated Peripheral

In design of custom host processor motherboard with custom Vision Processor D4 Board for embedded applications, a low mechanical profile 10 pin USB 3.1 Gen 1 receptacle can be implemented on motherboard and Vision Processor D4 Board.

7.4.1 USB 3.1 Gen 1 Receptacle

Table 7-1. USB 3.1 Gen 1 Receptacle Characteristics

PROPERTY	DESCRIPTION	DIAGRAM
Shell Finish	Tin (Sn)	Lock	Yes	
Ground Bar	Yes

10	3.3V	-	Supply Voltage, Connect to 3.3V

7.4.2 USB 3.1 Gen 1 High Speed Cable Assembly

The high speed cable assembly is developed and procured by the system integrator. The cable assembly design is specific to the system definition and must meet cable assembly design specification.

Table 7-3. USB 3.1 Gen 1 Plug Characteristics

PROPERTY	DESCRIPTION	DIAGRAM
Shell Finish	Tin (Sn)	

Friction Lock	Yes	Ground Bar	Yes	
Plug Part Number	IPEX 2047-0103	
Housing Part Number	IPEX 20346-010T-31	

Table 7-4. Cable Assembly Specification

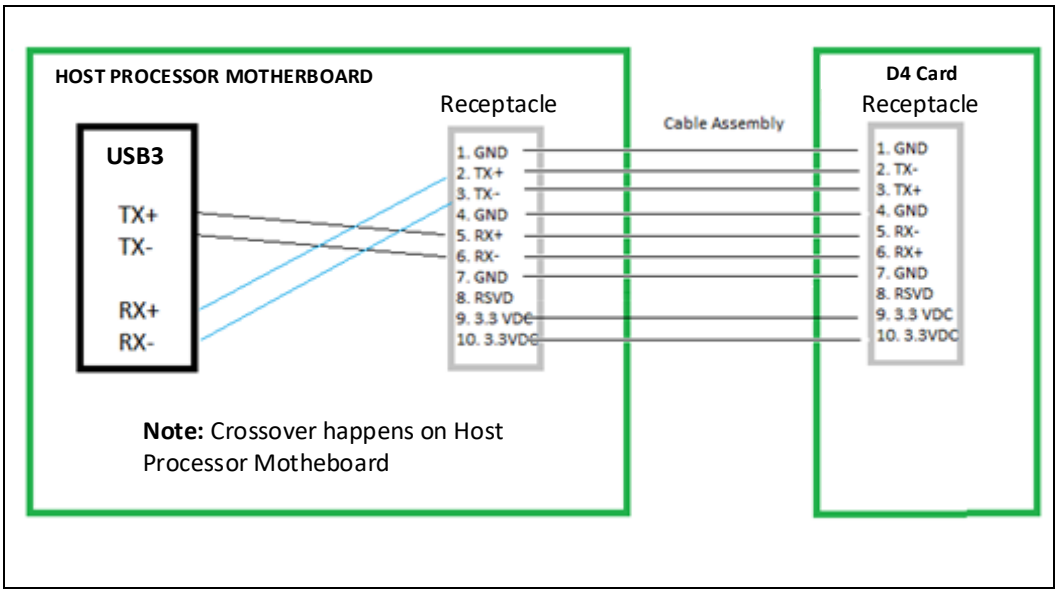
PROPERTY	DESCRIPTION
Cable Length	15 inches (max)
Controlled Impedance	85 Ohms with a tolerance of ± 10%.
Max Insertion Loss	<= 7.5 dB @2.5GHz
Cable Shielding	Each plug connected to the receptacle shield and GND bar.

The Transmit to receive pair crossover is expected on the Motherboard and not the cable assembly. This is done to allow for flat cable assemblies.

7.4.3 Transmit to Receive Crossover

The host USB 3.1 Gen 1 transmit signals must be connected to the Vision Processor D4 USB 3.1 Gen 1 receive signals. The host USB 3.1 Gen 1 receive signals must be connected to the Vision Processor D4 USB 3.1 Gen 1 transmit signals. It is recommended not to cross over the signals in the cable to allow cable wiring to be flat and as thin as possible.

Figure 7-5. Host Motherboard USB 3.1 Gen 1 Routing



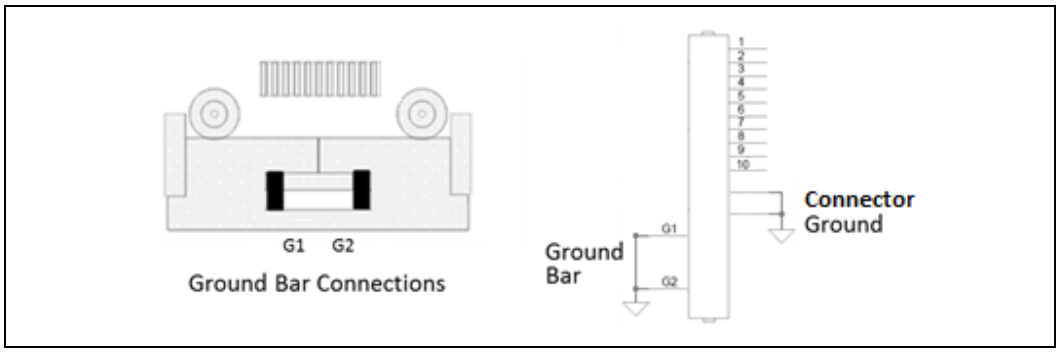
7.4.4 Motherboard Receptacle

Table 7-5. Motherboard Receptacle Properties

PIN	WIRE DESCRIPTION
Shielding	Metal shielding, connected to GND plane.
Grounding	Two ground bar connections in addition to the connector GND.

It is recommended that the motherboard receptacle be grounded as well as ground bar pads implemented.

Figure 7-6. Receptacle Ground Bar Motherboard Connections



7.4.5 Vision Processor D4 Board for Integrated Peripheral Power Requirements

The Vision Processor D4 Board is powered by 5V from host processor motherboard through USB 3.1 Gen 1 receptacle pins 9 and 10

Table 7-6. Vision Processor D4 Board as Embedded Peripheral Power Requirements

Parameter		Min	Nom	Max	Unit
VCC	Supply Voltage	+/-5%	5V		V
ICC	Supply Current			700	mA

7.5 Thermals

The system thermal design must ensure the component case temperature are not exceeded. Thermal models for Vision Processor D4 board and Depth modules are available to conduct a thermal evaluation and validate the system thermal design.

Table 7-7. Vision Processor D4 Board – Component Power and TDP at Max Operating Mode(1)

Component	Power	TDP	Unit
Vision Processor D4	618	618	mW
Color Camera ISP	196.83	196.83	mW
Voltage Regulators/Other	491.64	491.64	mW
All Components	1306.47	1306.47	mW

Table 7-8. Stereo Depth Module (Standard) – Component Power and TDP at Max Operating Mode(1)

Component	Power	TDP	Unit
Left Imager	118.5	118.5	mW
Right Imager	118.5	118.5	mW
IR Projector	1296	946(2)	mW
Color Sensor	118.5	118.5	mW
EEPROM + Thermal Sensor	4	4	mW
All Components	1655.5	1305.5	mW

Table 7-9. Stereo Depth Module (Wide) – Component Power and TDP at Max Operating Mode(1)

Component	Power	TDP	Unit
Left Imager	177	177	mW
Right Imager	177	177	mW
IR Projector	1620	1260(2)	mW
EEPROM + Thermal Sensor	4	4	mW
All Components	1978	1618	mW

1. Max. Operating Mode – Depth Resolution 1280X720 30FPS, Color Resolution - 1920X1080p 30FPS
2. The IR projector TDP is lower than power due to a percentage of energy dissipated as photonic emissions rather than heat.
3. Voltage Regulator power is included as part of the individual component power

Table 7-10. Vision Processor D4 Board Components – Case Temperature Limits (Still Air)

Component	Min	Max(1)	Unit
Vision Processor D4	0	110	°C
Color Camera ISP	0	70	°C

For the Depth Modules, case temperature is specified for the overall depth module and the thermocouple test location is any point on bottom metal stiffener

Figure 7-7. Bottom Stiffener Depth Module D410

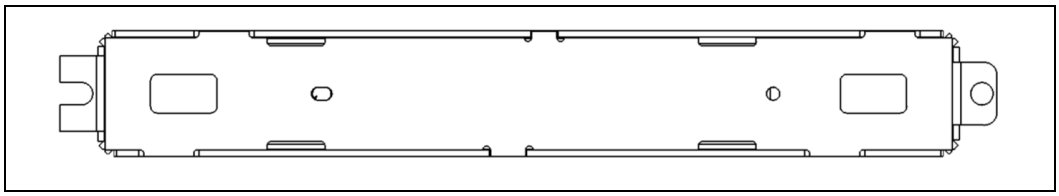


Figure 7-8. Bottom Stiffener Depth Module D430

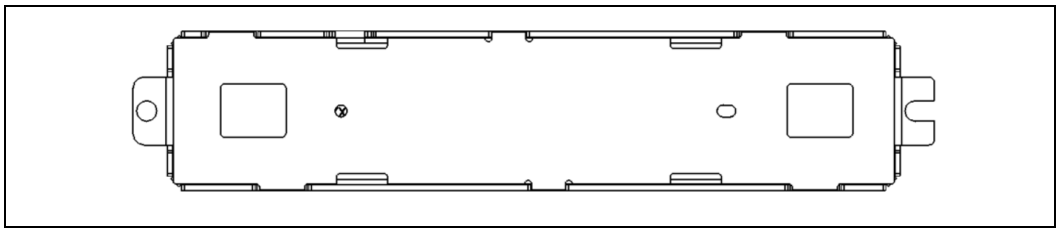


7.6 Stereo Depth Module Flex

It is critical that stereo depth module does not experience flex during system integration or during use after integration. Micron level flexing of the module can render the calibration incorrect and will result in poor performance or nonfunctional depth data. It is important for system designers to isolate the module from any chassis flex the system may encounter. While the module has a reinforcement housing, the housing is not intended to counter loads from chassis flex. The primary function of the housing is to prevent loss of calibration from handling and operating environments.

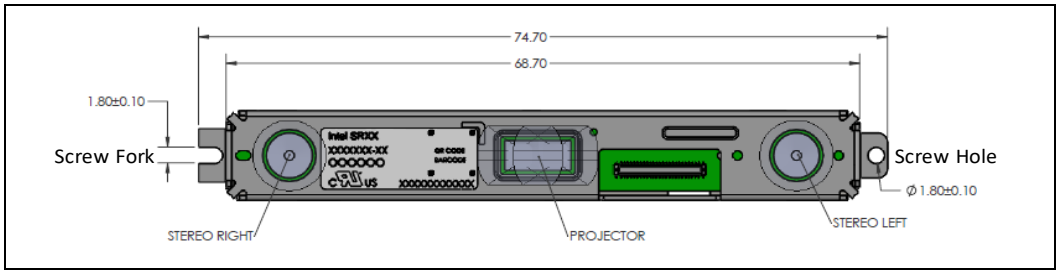
It is possible for the module to recover depth performance after experiencing permanent deformation. However, the module's ability to recover is dependent on the amount of deformation experienced.

7.7 Stereo Depth Module Mounting Guidance

7.7.1 Screw Mount

The stereo depth module incorporates a screw hole and a screw fork for module mounting. The stereo depth module should be mounted on a large heat sink or a heat dissipating structure element using M1.6 screw at the screw hole and fork. The recommended torque for both screws is 1.6Kgf*cm. Thermal interface material should be used on backside region of IR projector and two stereo imagers between camera module and heat sink or heat dissipating structure element for thermal transfer.

Figure 7-9. Stereo Depth Module Screw Mount



7.7.2 Bracket Mount

The Stereo Depth module should be mounted on large heat sink or a heat dissipating structure element using the bracket placed at the center of module. The bracket is made up of 0.35mm thickness stainless steel. The bracket is secured to the heat sink or structure element using two M1.6 screws with recommended torque of 1.6Kgf*cm. The rectangular (400/410 bracket) or circular (430 bracket) cutout is for thermal interface filler or as IR Projector opening when reversing bracket to mount. Thermal interface material should be used on backside region of IR projector and two stereo imagers between camera module and heat sink or heat dissipating structure element for thermal transfer. The camera module should have a minimum of 0.2mm clearance from all sides except for the area around bracket. It is not required to have screws at the screw hole and screw fork at both ends of module when mounting camera module using bracket.

Figure 7-10. Stereo Depth Module Bracket

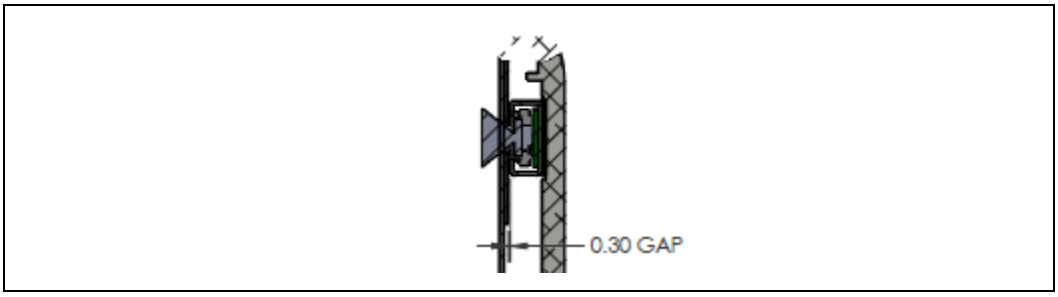
7.7.3 Stereo Depth Module Air gap

A minimum 0.3mm air gap is recommended between highest components on the stereo depth module to the cover window

Figure 7-13. Stereo Depth Module Air Gap



7.8 Thermal Interface Material

Thermal interface material, specifically thermal paste/grease is recommended to be inserted between the stereo depth module and the heat dissipating structure (heat sink) to improve the thermal coupling between these two components. A thermal paste with thermal conductivity in the 3-4W/mK range is recommended. This paste must be applied in a thin layer on the back side of the IR projector and also under the left and right imagers filling up the air gap under the Imagers.

7.9 Heat Sink

The heat sink or heat dissipating structure element used to mount stereo depth module and ASIC Board should be a minimum of 2-3mm in thickness. It is advisable to extend the heat sink by a few mm beyond the edges of the stereo depth module. It is also recommended to have thermal fins on the back side of the heat dissipating structure. In applications where weight is a concern, high thermal conductivity graphite tape can be attached to the back side of the heat sink. This graphite tape must be at least as big as the metal heat sink and extended out beyond the metal as much as possible for optimal cooling. Heat sink metal must be a high conductivity aluminum alloy or copper.
In cases where the module is expected to operate at high ambient temperatures, additional airflow may be required to ensure temperature limits are not exceeded. These are guidelines for thermal integration of the D4 camera in the system, however actual testing or system level thermal modeling is recommended before finalizing solution.

7.10 Cover Design and Material Guidance

The stereo depth module components must be covered to minimize dust and humidity. The transparent cover material stack-up used must provide acceptable transmission based on the component wavelengths. Anti-reflective coatings can help increase the transmission of cover material. Cover material that reduces light transmission can result in poor depth performance and will decrease the working

range of the camera. Nominally flat, non-distorting and low scattering cover material should be used.

Table 7-12. Component Transmission

Component	Wavelength	Unit
Left and Right Imager (Intel® RealSense™ D410/D430)	400 to 865 (Visible and Infrared) @ 98% transmission rate or higher at all viewing and transmitting angles	nm
Left and Right Imager (Intel® RealSense™ D400/D420)	Visible spectrum @ 98% transmission rate or higher at all viewing and transmitting angles	nm
IR Projector	850nm ± 15 nm @ 98% transmission rate or higher at all viewing and transmitting angles	nm

NOTES:

1. Higher transmissions @ 98% transmission rate or higher is recommended and not a requirement.
2. Intel RealSense Camera 400-Series provides control over laser power and sensor exposure. Minor loss of transmission due to cover material transmissivity might be compensated by increasing exposure when less light is able to reach the sensors and by increasing laser power for IR projector pattern projection loss.
3. Uncoated clear acrylic (plexiglass) plastic cover is an example for cover material
4. Anti-reflective coatings can help increase the transmission of cover material.

If different cover material is used in front of the cameras and the IR projector to maximize transmission based on component wavelengths, cover design considerations should ensure that the FOV of the cameras and FOP of the IR projector are not impacted.

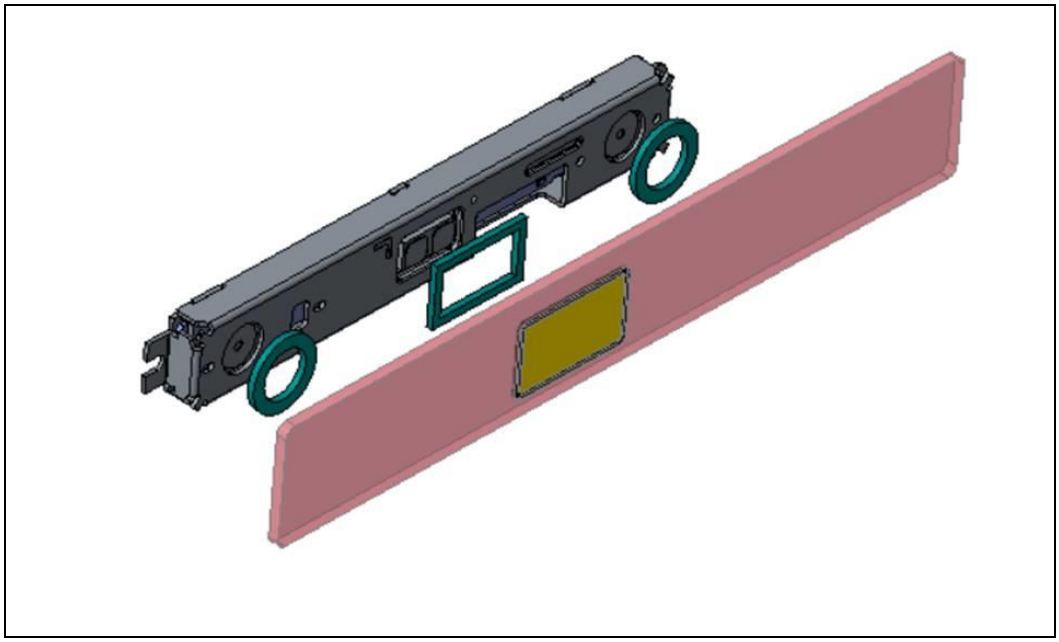
If different cover material is used in front of the cameras and the IR projector to maximize transmission based on component wavelengths, cover design considerations should ensure that the FOV of the cameras and FOP of the IR projector are not impacted.

7.11 Gaskets

Gaskets are recommended for providing optical isolation and dust protection. However, gaskets can impede FOV and place unwanted stress on the module or the individual sensor lens holders.

Gasket static force can deform the cosmetic baffle/lens holder resulting in poor image quality and permanent damage to the camera. Gaskets placed on the module stiffener can transfer chassis flex into the camera module causing loss of depth data. Gasket thickness has a large effect on the static force applied to the module surface. The thinner the seal, the greater the static force applied. Once the gasket is compressed, the static force will increase exponentially.

Figure 7-14. Illustration of Gasket Placement and Cover Material

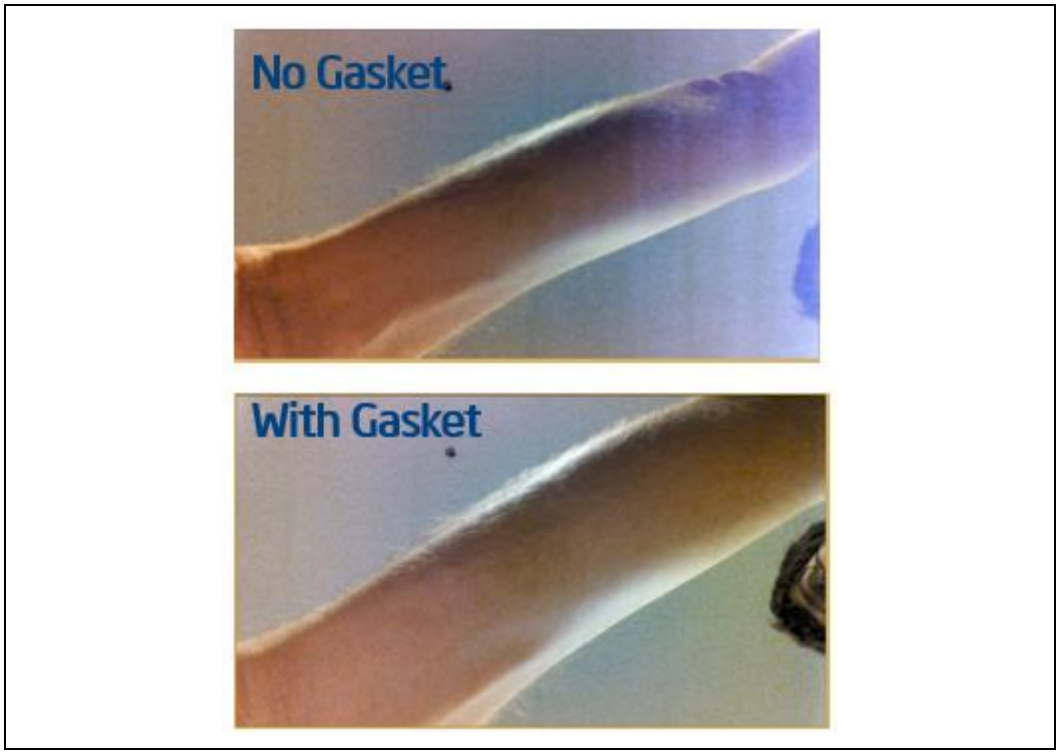


7.11.1 Optical Isolation

It is recommended to isolate the left/right imagers and IR projector from each other to prevent reflections off the cover material. Not properly isolating the cameras can result in leakage light as shown in Figure 7-15. Example of Light Leakage Effects

To prevent light leakage, it is recommended to use a gasket material in between the cover holes and the module. The gasket material needs to be compliant so that it does not transmit chassis flex forces to the module.

Figure 7-15. Example of Light Leakage Effects



7.11.2 Dust Protection

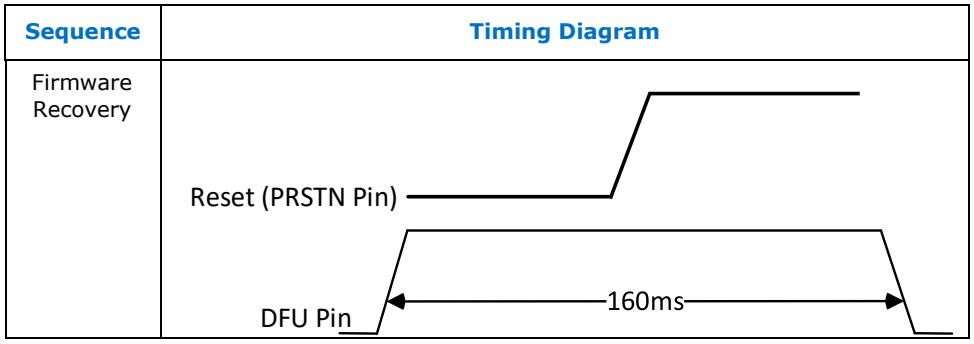
Dust particles can accumulate over the camera lenses which can be visually unappealing and degrade image quality.

7.12 Firmware Recovery

To support firmware recovery, a 3.3V controllable interrupt must be connected to the Vision Processor D4 DFU (Device Firmware Update) pin

The ability to recovery the image system if the firmware becomes corrupted requires D4 reset and DFU pin driven high for 160ms. The DFU pin should remain high when D4 is out of reset for D4 to boot in DFU mode. The 160ms ensures that the DFU pin is held high through the reset sequence.

Figure 7-16. Firmware Recovery Sequence



7.13 Calibration Support

It is required to have an accessible USB port to access the host system. The accessible USB port would allow to stream images reliably to an external PC to determine calibration parameters and to write back camera calibration parameters via the host system

The USB port should be able to be configured in a mode where the USB port can access the host. The access to USB port is required at manufacturing and not intended to be available on shipped product or to end user.

7.14 Multi-Camera Hardware Sync

Intel® RealSense™ D400 Series supports hardware sync signal for multi-camera configuration. For multiple cameras to be hardware synchronized as to capture at identical times and frame rates, pins 5 (SYNC) and pins 9 (Ground) on external sensor sync connector will need to be connected. The external sensor sync connector is on Vision Processor D4 board and is accessible on Depth Cameras.

Figure 7-17. External Sensor Sync Connector Location on D4 Vision Processor D4 Board

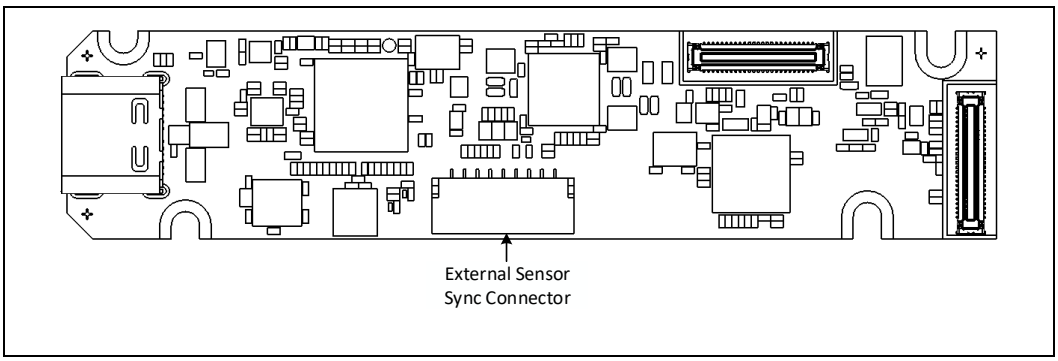


Figure 7-18. External Sensor Sync Connector Location on Depth Camera D435

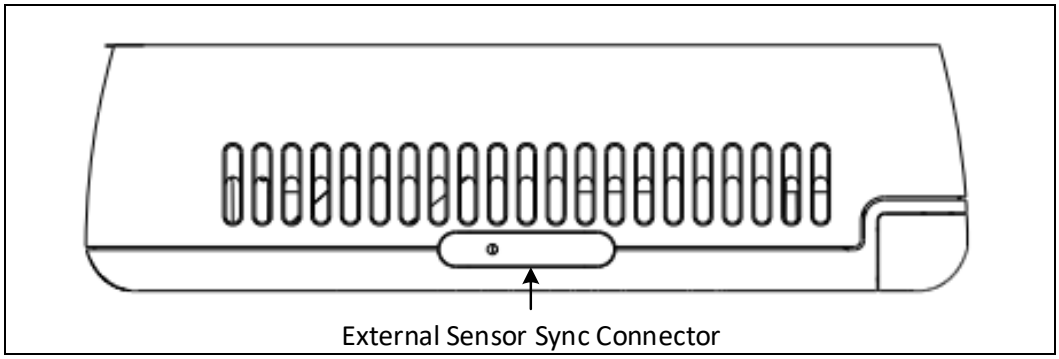

For additional details on how to implement the multi-camera hardware sync feature, please refer to multi-camera white paper at https://realsense.intel.com/intel-realsense-downloads/#whitepaper.

7.15 Handling Conditions

Table 7-13. Electrostatic Discharge Caution

	To provide a consistent ESD protection level during D4 system assembly and rework, it is recommended that the JEDEC JESD625-A requirements standard be incorporated into the ESD environment controls.

§ §

8 Platform Design Guidelines

The Platform Design Guidelines has been developed to ensure maximum flexibility for board designers while reducing the risk of board related issues. Design recommendations are based on Intel's simulations and are strongly recommended.

8.1 Vision Processor D4 on Motherboard

This Design Guidelines provides Vision Processor D4 on motherboard implementation recommendations for the Kaby Lake U/Y (7th Generation Intel® Core™ Processors) and Cherry Trail T4 (Intel® Atom™ Z8000 Processor Series) platforms with 8/10 layer Type 4 PCB.

Supported platform topologies are:

1. Vision Processor D4 with USB Host Interface
2. Vision Processor D4 with MIPI Host Interface
3. Vision Processor D4 on Board for USB Integrated Peripheral

Figure 8-1. Vision Processor D4 with USB Host Interface

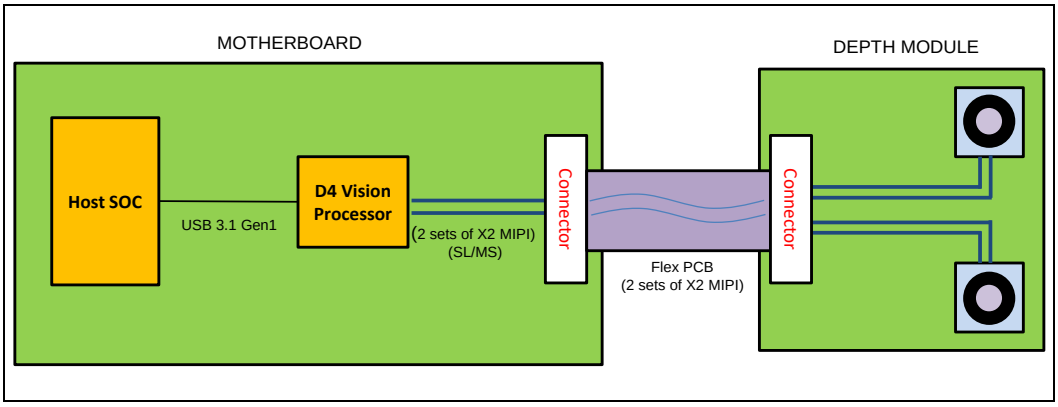

Figure 8-2. Vision Processor D4 with MIPI Host Interface

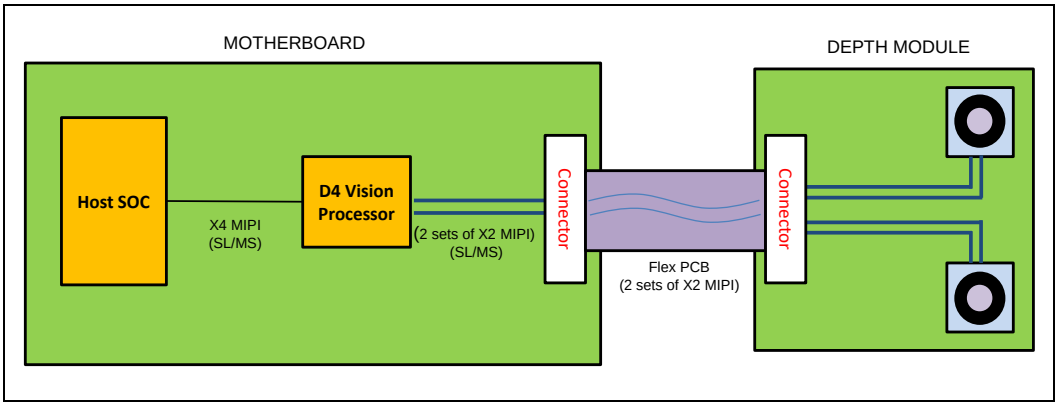

Figure 8-3. Vision Processor D4 on Board for USB Integrated Peripheral

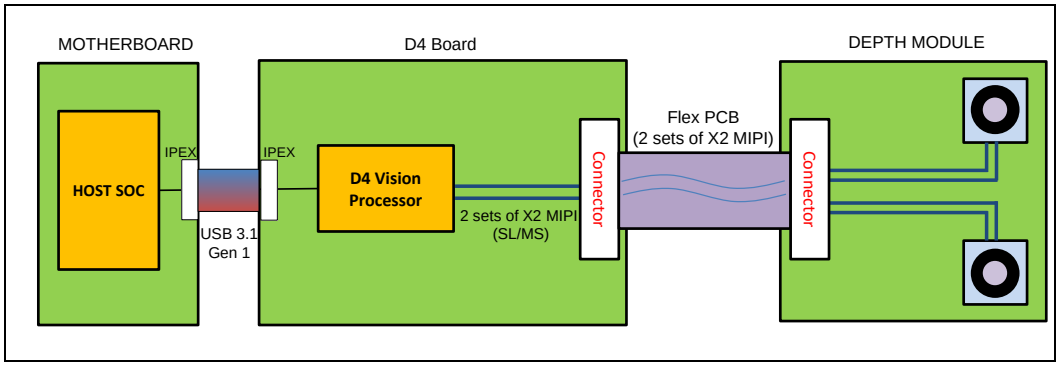

8.2 Kaby Lake U and Kaby Lake Y platforms

8.2.1 Kaby Lake Platform Introduction

The Kaby Lake U platform consists of a Kaby Lake U processor plus a Kaby Lake Platform Controller Hub (PCH) in the same Multi Chip Package (MCP). Similarly the Kaby Lake Y platform consists of a Kaby Lake Y processor plus a Kaby Lake PCH in the same Multi Chip Package (MCP).

Note: For Kaby Lake U/Y platform design guidelines, refer Kaby Lake U and Y Platform Design Guide. (Doc# 561280)

8.2.2 Supported PCB Stack-Up and Routing Geometries

Refer to Kaby Lake U/Y Platform Design Guide for type 4 PCB stack up, Breakout/Breakin geometries, Main Route stripline/microstrip geometries and Via recommendations. It is strongly recommended to follow the given impedance criteria in the design guide for the given interface.

8.2.3 Vision Processor D4 on Motherboard with USB Host Interface

8.2.3.1 USB 3.1 Gen 1 Motherboard Routing

Figure 8-4. Host Processor - Vision Processor D4

Table 8-1. Host Transmit – Vision Processor D4 Receive Routing Guidelines

Parameter	Breakout (BO)	Main Route (MR)	Breakin (BI)	Total Allowed Length (L_BO + L_MR + L_BI)
Maximum Segment Length (Inches)	0.25	15-BO-BI	0.25	15
Maximum Allowed Channel Insertion loss (dB)				<=15 dB @2.5MHz

Table 8-2. Vision Processor D4 Transmit - Host Receive Routing Guidelines

Parameter	Breakout (BO)	Main Route (MR)	Breakin (BI)	Total Allowed Length (L_BO + L_MR + L_BI)
Maximum Segment Length (Inches)	0.25	15-BO-BI	0.25	15
Maximum Allowed Channel Insertion loss (dB)				<=15 dB @2.5MHz

NOTES:

- Simulation results shows that overall 15 inch channel routing is good for USB 3.1 Gen 1 Vision Processor D4 to Host connection motherboard. This connection does not include any connector or cable.
- All routing is recommended to be 85 ohm impedance.

- Breakout/Breakin should be maximum length of 250 mil for 85 ohm routing, if there is any impedance variation due to narrow escape BGA breakout, the maximum routing length should be 150mil.
- Maximum number of via count:4 (including package microvia)
- It is strongly recommended that overall channel loss is within -15dB for satisfactory performance.

8.2.4 Vision Processor D4 on Motherboard with MIPI Host Interface

8.2.4.1 MIPI Motherboard Routing

Figure 8-5. Vision Processor D4 Transmit - Host Receive

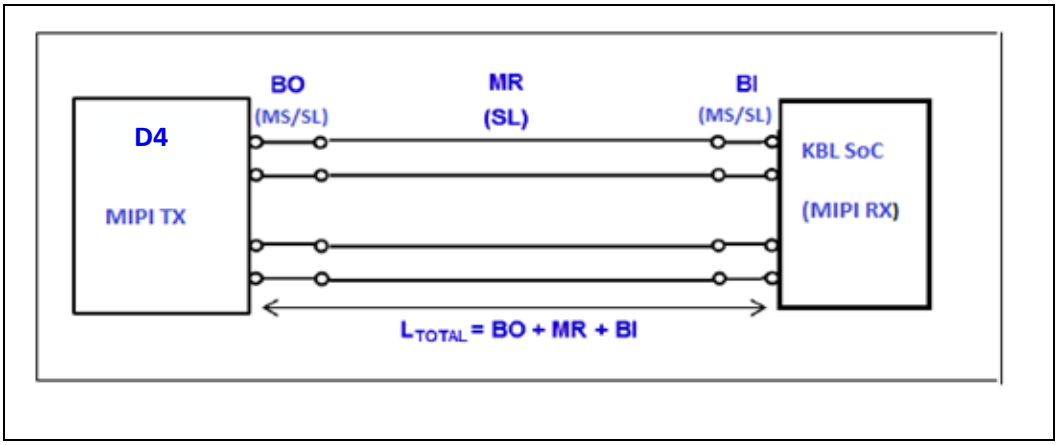

Table 8-3. Vision Processor D4 Transmit – Host Receive Routing Guidelines

Parameter	Breakout (BO)	Main Route (MR)	Breakin (BI)	Total Allowed Length (L_BO + L_MR + L_BI)
Maximum Segment Length (Inches)	0.25	15-BO-BI	0.25	15
Maximum Allowed Channel Insertion loss (dB)				<=5.5 dB @750MHz

NOTES:

- Maximum via count = 4 vias including the first micro-via from package ball.
- Minimum stripline breakout pair-to-pair spacing of 2.36 mils is allowed near package ball out region with maximum length of 250 mils.
- Main route and Break-in nominal impedance is required to be consistent. Example: 85 ohm main route and 85 ohm break-in. Mixture of nominal impedance is not recommended.
- Length matching within a differential pair is +/- 5 mils maximum.

- The maximum allowed channel insertion loss budget dictates the total allowed length. The total insertion loss allowed for interconnect from the D4 package die bump to Kaby Lake SoC package die bump is about 5.5dB at 750 MHz. It should be noted that though only the insertion loss value at the fundamental frequency (750 MHz) is specified, the insertion loss curve up to about 1.5 GHz should be well behaved with no strong resonance or ripple.

8.2.4.2 MIPI Motherboard Routing (Stereo Depth Module Transmit to Vision Processor D4 Receive)

Figure 8-6. Stereo Depth Transmit - Vision Processor D4 Receive

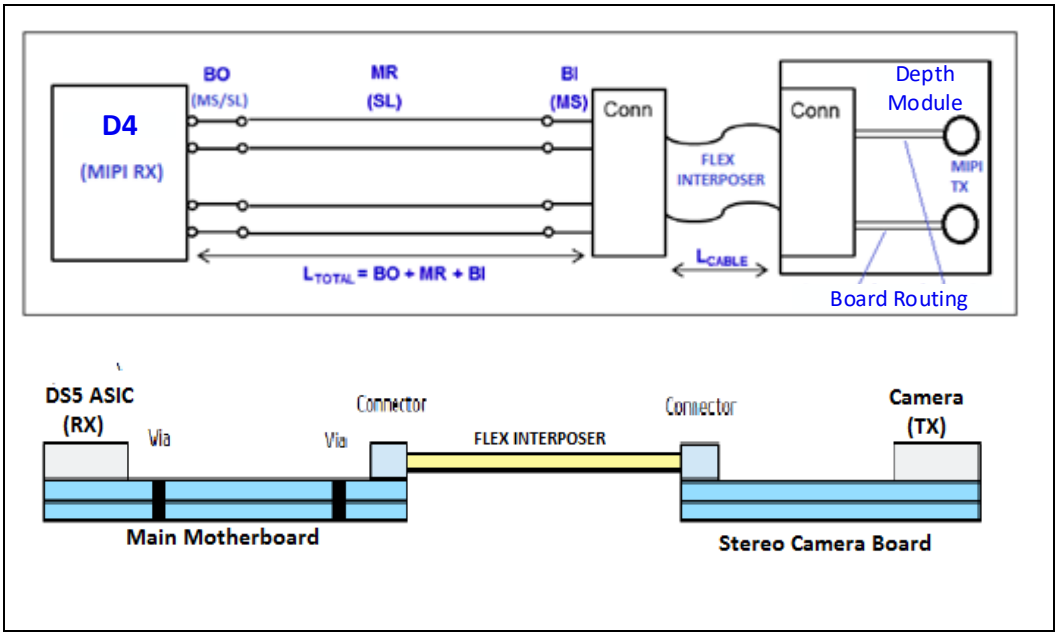

Table 8-4. Stereo Depth Module Transmit - Vision Processor D4 Receive Routing Guidelines

Parameter	Breakout (BO)	Main Route (MR)	Breakin (BI)	Flex Interposer Length (L_Cable)	Camera Board Length (L_Camera)	Total Allowed Length (L_MB + L_Cable + L_Camera)
Maximum Segment Length (Inches)	0.25	15 – L_Cable - L_Camera – BO - BI	0.25	15-L_MB-L_camera	L_Camera (max ~2 inches)	15
Maximum Allowed Channel Insertion loss (dB)						<=5.5 dB @750MHz

NOTES:

- Stereo depth module MIPI routing length are assumed to be 2 inches (max)
- Maximum via count = 3 vias including the first micro-via from package ball.

- Minimum stripline breakout pair-to-pair spacing of 2.36 mils is allowed near package ball out region with maximum length of 250 mils.
- Main route and Break-in nominal impedance is required to be consistent. Example: 85 ohm main route and 85 ohm break-in. Mixture of nominal impedance is not recommended.
- Length matching within a differential pair is +/- 5 mils maximum.
- No length match requirements for signals routed to different camera modules.
- The maximum allowed channel insertion loss budget dictates the total allowed length. The total insertion loss allowed for interconnect from the package die bump to the connector on the camera module is about 5.5dB at 750 MHz as shown in the table. This recommendation allows the use of any cable type as long as the maximum allowed insertion loss is met. It should be noted that though only the insertion loss value at the fundamental frequency (750 MHz) is specified, the insertion loss curve up to about 1.5 GHz should be well behaved with no strong resonance or ripple.
- Flex Interposer recommendation: 85-100ohm impedance with maximum length of 4-6 inches. The recommended interposer should be Flex PCB based design.

Figure 8-7. Flex Interposer PCB Stack-Up

TOP	CONDUCTOR	COPPER	0.984252
	DIELECTRIC	FR-4	2.578740
02_SIG1	CONDUCTOR	COPPER	0.708661

03_PWR1	CONDUCTOR	COPPER	0.708661
	DIELECTRIC	FR-4	31.771700
04_GND1	CONDUCTOR	COPPER	0.708661
	DIELECTRIC	FR-4	1.968500
05_SIG2	CONDUCTOR	COPPER	0.708661
	DIELECTRIC	FR-4	2.578740
BOTTOM	CONDUCTOR	COPPER	0.984252

8.2.5 Vision Processor D4 Board for Integrated Peripheral (USB 3.1 Gen 1 Host to Vision Processor D4 Routing)

Figure 8-8. USB 3.1 Gen 1 Host to Vision Processor D4 Topology

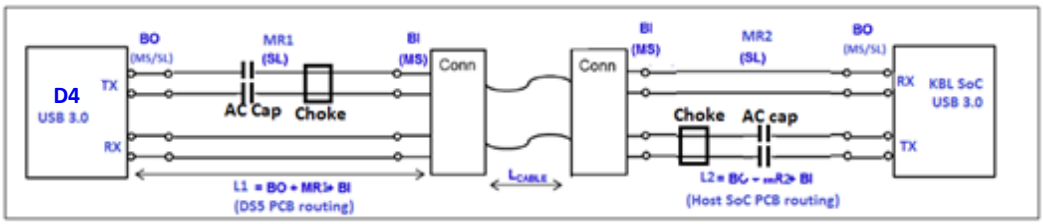

Table 8-5. USB 3.1 Gen 1 Host to Vision Processor D4 Routing Guidelines

	Vision Processor D4 Board			USB 3.1 Gen 1 Cable	Host Motherboard		
Parameter	Breakout (BO)	Main Route (MR)	Breakin (BI)	Cable Length (L_Cable)	Breakout (BO)	Main Route (MR)	Breakin (BI)
Maximum Segment Length (Inches)	0.25	2	0.25	15 (max)	0.25	5	0.25
Maximum Allowed Channel Insertion loss (dB)	<= 15 dB @ 2.5GHz Max recommended USB 3.1 Gen 1 cable loss <= 7.5 dB @2.5GHz						

NOTES:

- The maximum allowable motherboard routing of USB 3.1 Gen 1 signals on Host PCB should be 5-6inch inch and routing on Vision Processor D4 Board should be 2-3inch.
- It is recommended that an 85 ohm common mode choke (CMC) be designed in line with both the USB 3.1 Gen 1 signals. The CMC should be placed as close to the connector as possible.
- It is required that a 0.1µF AC coupling capacitor is designed in series with both the USB 3.1 Gen 1 signals.
- The USB 3.1 Gen 1 cable assembly should have a differential impedance of 85 Ohms with a tolerance of ± 10%.
- The max cable length should not exceed 15 inch with target loss of 7.5dB@2.5GHz
- Overall channel loss including cable should not exceed 15dB @2.5GHz

8.2.6 USB2.0 Design Guidelines (USB2 Host to Vision Processor D4 Routing)

Figure 8-9. USB2.0 Host to Vision Processor D4

Parameter	Breakout (BO)	Main Route (MR)	Breakin (BI)	Total Allowed Length (L_BO + L_MR + L_BI)
Maximum Segment Length (Inches)	0.25	15-BO-BI	0.25	15
Maximum Allowed Channel Insertion loss (dB)				

NOTES:

- Simulation results shows that overall 15 inch channel routing is good for USB2.0 D4 to Host topology on motherboard. This topology does not include any connector or cable.
- All routing is recommended to be 85 ohm
- Breakout/breakin should be max of 250mil for 85ohm routing, if there is any impedance variation due to narrow escape BGA breakout, the max routing should be 150mil.
- Maximum number of via count:4 (including package microvia)
- It is strongly recommended that overall channel loss to be within -15dB for satisfactory performance

8.3 Cherry Trail T4 Platform

8.3.1 Cherry Trail T4 Platform Introduction

The Cherry Trail T4 is the Intel Architecture (IA) SoC that integrates the Intel® processor core, Graphics, Memory Controller, and I/O interfaces into a single system-on-chip solution.

Note: For Cherry Trail T4 platform design guidelines, refer Cherry Trail T4 Platform Design Guide. (Doc# 537901)

Note: Cherry Trail platform supports 2 SoC skus, T3 and T4. The Vision Processor D4 platform design guidelines discussed in this chapter are only applicable to T4 based Cherry Trail platform. For information on Cherry Trail T4 SoC, refer to Intel® Atom™ Z8000 Processor Series - External Design Specification (EDS) (Doc# 539071)

8.3.2 Vision Processor D4 Platform Design Guidelines

The Vision Processor D4 platform design guidelines on Cherry Trail T4 platform would follow the same guidelines specified for Kaby Lake U and Y platforms.

8.3.2.1 Supported PCB Stack-Up and Routing Geometries

Refer to Cherry Trail T4 Platform Design Guide for Type 4 PCB stack up, Breakout/Breakin routing geometry, Main Route stripline/microstrip geometry and Via recommendations. It is strongly recommend to follow the given impedance criteria in the design guide for the given interface.

§§

9 Regulatory Compliance

9.1 System Laser Compliance

The Intel® RealSense™ D400 series certification is transferable to the system and no system recertification is required. However, the following statements and labels must be included in the user manual of the end product

9.1.1 Certification Statement

This product is classified as a Class 1 Laser Product under the EN/IEC 60825-1, Edition 3 (2014) internationally and IEC60825-1, Edition 2 (2007) in the US.

This product complies with US FDA performance standards under 21 CFR 1040.10 for laser products except for deviations pursuant to Laser Notice No. 50 dated June 24, 2007.

9.1.2 Explanatory Label

This device complies with US FDA performance standards for laser products except for deviations pursuant to Laser Notice No. 50 dated June24, 2007.

9.1.3 Cautionary Statements

System integrators should refer to their respective regulatory and compliance owner to finalize regulatory requirements for a specific geography.

Caution - Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

Do not power on the product if any external damage was observed.

There are no service/maintenance, modification, or disassembly procedures for the stereo module and infrared projector. The system integrator must either notify Intel or return modules before any failure analysis is performed.

Do not attempt to open any portion of this laser product.

Invisible laser radiation when opened. Avoid direct exposure to beam.

There are no user serviceable parts with this laser product.

Modification or service of the stereo module, specifically the infrared projector, may cause the emissions to exceed Class 1.

No magnifying optical elements, such as eye loupes and magnifiers, are allowed.

Do not try to update camera firmware that is not officially released for specific camera module SKU and revision.

9.1.4 Manufacturer's Information

Manufactured by Intel Corporation
2200 Mission College Blvd., Santa Clara, CA 95054 USA

9.1.5 US FDA Accession Number

Table 9-1. U.S. FDA Accession Number

Component	U.S. FDA accession numbers
Intel® RealSense™ Depth Module D410/D415	1420260-006
Intel® RealSense™ Depth Module D430	1420260-007

This accession number should be entered into Box B.1 of the Food and Drug Administration (FDA) 2877 Declaration for Imported Electronic Products Subject to Radiation Control Standards.

9.1.6 NRTL Statement

For the US and Canada market, this product has been tested and certified by UL and Nemko, and found to be compliant with all applicable requirements of the specifications below.

UL 60950-1 2nd Edition, CAN/CSA C22.2 No. 60950-1-07, Information Technology Equipment – Safety – Part 1: General Requirements

Both UL and Nemko are Nationally Recognized Testing Laboratories (NRTLs), recognized by US Occupational Safety and Health Administration (OSHA) as qualified to perform safety testing and certifications covered within its scope of recognition.

产品中有毒有害物质的名称及含量

Hazardous Substances Table

部件名称 Component Name	有毒有害物质或元素 Hazardous Substance					
	铅 Pb	汞 Hg	镉 Cd	六价铬 Cr (VI)	多溴联苯 PBB	多溴二苯醚 PBDE
相机 Camera	X	○	○	○	○	○
印刷电路板组**件** Printed Board Assemblies	X	○	○	○	○	○

○：表示该有毒有害物质在该部件所有均质材料中的含量均在GB/T 26572标准规定的限量要求以下。

○：Indicates that this hazardous substance contained in all homogeneous materials of such component is within the limits specified in GB/T 26572.

×：表示该有毒有害物质至少在该部件的某一均质材料中的含量超出GB/T 26572标准规定的限量要求。

×: Indicates that the content of such hazardous substance in at least a homogeneous material of such component exceeds the limits specified in GB/T 26572. 对销售之日的所售产品,本表显示我公司供应链的电子信息产品可能包含这些物质。注意：在所售产品中可能会也可能不会含有所有所列的部件。 This table shows where these substances may be found in the supply chain of our electronic information products, as of the date of sale of the enclosed product. Note that some of the component types listed above may or may not be a part of the enclosed product.
除非另外特别的标注,此标志为针对所涉及产品的环保使用期限标志. 某些可更换的零部件可能会有一个不同的环保使用期限(例如,电池单元模块). 此环保使用期限只适用于产品在产品手册中所规定的条件下工作.      The Environment-Friendly Use Period (EFUP) for all enclosed products and their parts are per the symbol shown here, unless otherwise marked. Certain field-replaceable parts may have a different EFUP (for example, battery modules) number. The Environment-Friendly Use Period is valid only when the product is operated under the conditions defined in the product manual.

9.2.2 Waste Electrical and Electronic Equipment (WEEE)

"In the EU, this symbol means that this product must not be disposed of with household waste. It is your responsibility to bring it to a designated collection point for the recycling of waste electrical and electronic equipment. For more information, contact the local waste collection center or your point of purchase of this product."

GPIO[6]	H15	GVSYNC3 - Routed to External Sensor Sync Connector pin 4 through 0 ohm stuff resistor with optional LASER_PWM through 0 ohm **no stuff** resistor or No Connect if not used.	
GPIO[7]	H13	Routed to Stereo Depth Receptacle Pin 21 or No Connect if not used.	
EGPIO[0]	L01	FLAGB - Routed to Stereo Depth Connector Receptacle Pin 49 with pull up option to 1.8V with 0 ohm **no stuff** resistor	
EGPIO[1]	E03	Pull up option to 1.8V with 0 ohm **no stuff** resistor	
EGPIO[2]	K01	Pull up option to 1.8V with 0 ohm **no stuff** resistor	
EGPIO[3]	L02	LASER_PWRDN - Routed to Stereo Depth Connector Receptacle Pin 45 with pull up option to 1.8V with 0 ohm **no stuff** resistor	
EGPIO[4]	M02	Pull up to 1.8V with 4.99K resistor	
EGPIO[5]	J02	Pull down option to GND with 0 Ohms no stuff resistor	
EGPIO[6]	D01	Pull up option to 1.8V with 0 ohm **no stuff** resistor	
EGPIO[7]	E01	Pull down to GND with 4.99K resistor	
EGPIO[8]	F01	ISP_FCS – Color ISP EEPROM Chip Select. Also pulled up to 1.8V with 4.99K resistor	
EGPIO[9]	E02	Pull up option to 1.8V with 0 ohm **no stuff** resistor	

Signal Name	Pad	Connection	√
EGPIO[10]	J01	Pull up option to 1.8V with 4.99K **no stuff** resistor	
EGPIO[11]	F03	Pull up option to 1.8V with 4.99K **no stuff** resistor	
EGPIO[12]	K02	Pull up option to 1.8V with 4.99K **no stuff** resistor	
EGPIO[13]	F02	Pull up option to 1.8V with 0 ohm **no stuff** resistor	
USB			
USB_RXP	B02	Intel®Vision Processor D4 Board supports USB Type-C connection to Host USB. Route as appropriate connection to Host USB	
USB_RXN	A03	Intel®Vision Processor D4 Board supports USB Type-C connection to Host USB. Route as appropriate connection to Host USB.	
USB_TXP	B01	Intel®Vision Processor D4 Board supports USB Type-C connection to Host USB. Route as appropriate connection to Host USB.	
USB_TXN	A02	Intel®Vision Processor D4 Board supports USB Type-C connection to Host USB. Route as appropriate connection to Host USB.	
USB_DP	D03	Intel®Vision Processor D4 Board supports USB Type-C connection to Host USB. Route as appropriate connection to Host USB.	
USB_DN	D02	Intel®Vision Processor D4 Board supports USB Type-C connection to Host USB. Route as appropriate connection to Host USB.	
USB_ID	E05	Intel®Vision Processor D4 Board supports USB Type-C connection to Host USB. Route as appropriate connection to Host USB.	
USB_RESREF	E04	200 ohm pull down to GND. (This resistor should be placed as close to ASIC as possible)	
MISCELLANIOUS			
LD_ON_OUT_XX	K13	(RESERVED) No Connect	
MODSTROB	J15	(RESERVED) No Connect	
MODSIGN	J14	(RESERVED) No Connect	
LD_ERR	J13	Connected to FF_RSTn (schematic)	
CLKXI	G1	24MHz XTAL. Refer to platform implementation schematic in Figure 10-2.	
CLKXO	H1	24MHz XTAL. Refer to platform implementation schematic in Figure 10-2.	
PRSTN	C3	Platform implementation specific	
CW_CSR_PRSTN	P15	No Connect	
PMU_PWR_EN	K3	Enables VDD_PG voltage rail.	

Signal Name	Pad	Connection	√
DFU	C2	Platform implementation specific	
ISP_SCL	M10	(RESERVED) No Connect	
ISP_SDA	N9	(RESERVED) No Connect

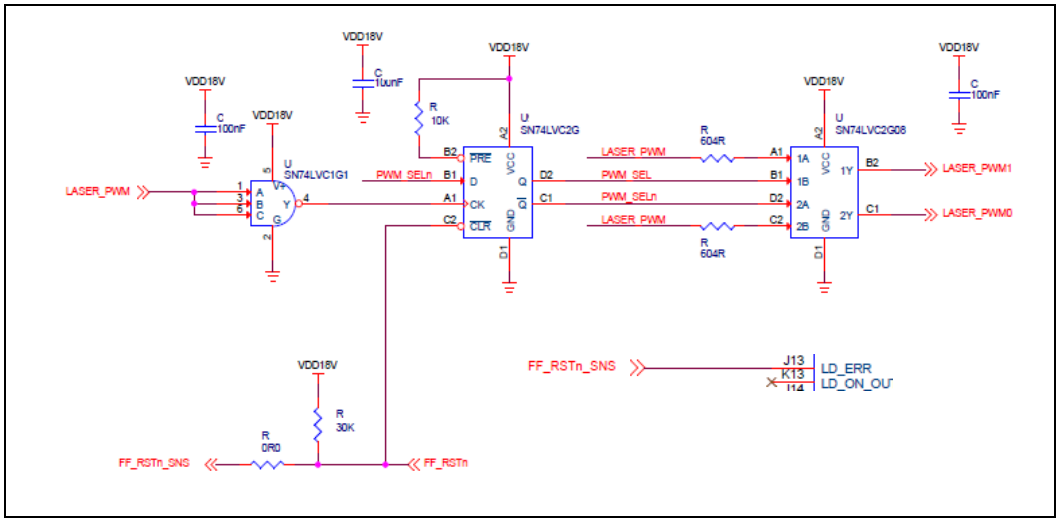

Figure 12-2. Vision Processor D4 24MHz Crystal Clock Reference Platform Schematic

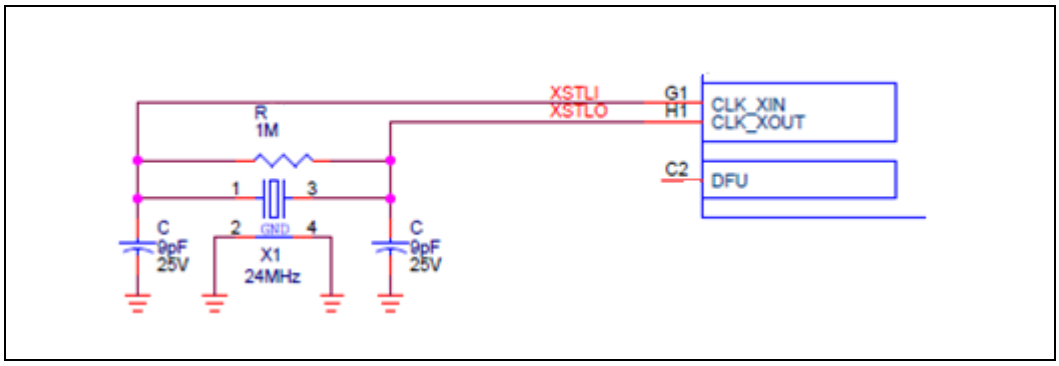

12.1 Power Delivery

The DC–DC power circuity discussed in this section must be followed for Vision Processor D4 on Motherboard designs. TPS62085R DC-DC converter (www.ti.com) generates 0.9V and SC21150 (www.semtech.com) generates 1.8V and 3.3V voltage rails from 5V to power Vision Processor D4, Stereo Depth Module.

Figure 12-3. DC-DC Reference Platform Schematic (3.3V, 1.8V, 0.9V)

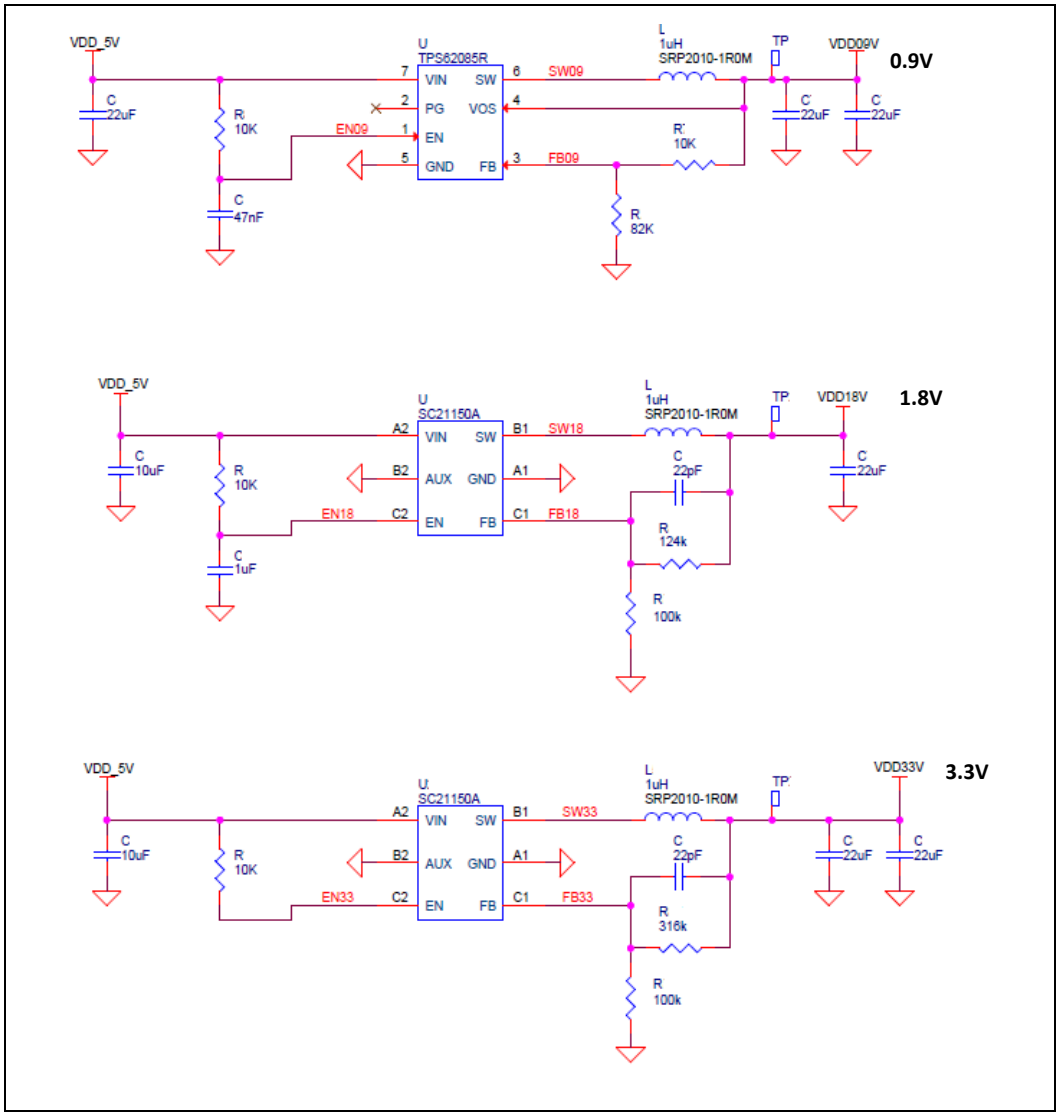

Figure 12-4. Vision Processor D4 VDD_PG and AVDD Reference Platform Schematic

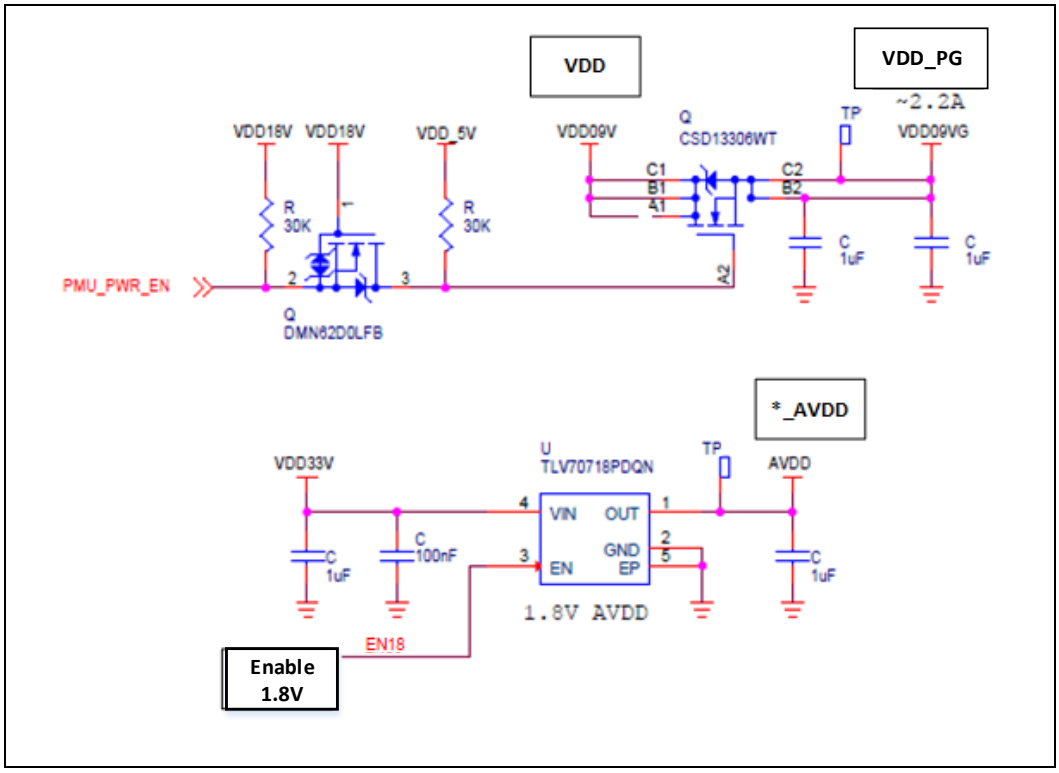

Table 12-2. Vision Processor D4 Decoupling and Filter Requirements

Voltage Ball Name	Decoupling	Filter	Notes
VDD	4X 100nF		
VDD_PG	8X 100nF		
USB_DVDD	2X 100nF	1X 100nF 1X FERRITE BEAD 120 OHM	
VPTX0			
VP			
*AVDD	1X 100nF		
VDDPLL	1X 100nF	1X 100nF 1X FERRITE BEAD 120 OHM	
VDDTS	1X 100nF		
VDDPST18 (Left and Right)	1X 100nF		
USB_VDD330	1X 100nF		
VBUS0			

13 Appendix B- Cover Material

Cover materials placed over the camera sensor must be carefully selected to avoid impacting software performance. The following parameters are an example of a suitable cover material. Other solutions are also acceptable but careful design and validation work should be done to verify a solution will perform adequately.

Table 13-1. Example: Cover Material Parameters

Specification	Recommendation	Notes
Hardness	6H	Prevent Scratches
Flatness	0.005mm	Minimize Distortion
Distance From Lens to Cover	Less than 8mm (D410/D415) Less than 2mm (D430)	Cover Material thickness of 1mm
Thickness of Cover	0.55mm ± 0.03mm	
Coatings	AR inside and outside	Avoid Reflections
Transmission Wavelength Range	400 to 865 (Visible and Infrared) @ 98% transmission rate or higher at all viewing and transmitting angles	
Cover Tilt Tolerance	± 1.0°	

§§
