SIMPLY GOOD INDOOR AIR
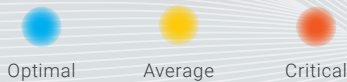

The **Venta AirSense ECO** features 3 professional sensors for a healthier room climate: VOC, humidity, temperature.

The Venta AirSense ECO detects harmful VOC gases which are emitted by everyday items such as furniture, electrical appliances, toys etc. in real time. It also indicates whether the temperature & humidity are too high or too low, ensuring comfortable living conditions in your home. The LED light strip changes colour to indicate the measured values in real time. This warns you of critical values instantly.

Evaluation in the Venta Home app

The Venta Home app gives you at-a-glance overviews of all measured values in each room. You immediately know when conditions in a room have reached a critical value and need to be corrected. When this happens, the Venta Home app recommends what you should do and shows you the possible causes. It can also provide detailed analyses that indicate how day-to-day activities can change the values.

Intelligent Smart Home device

The Venta AirSense ECO is more than a room climate and air quality measurement device. It sends the measured values to your Venta AirConnect-compatible appliances. Depending on your appliance model, it automatically reacts to and corrects the values to support healthier indoor air. The Venta AirSense is more than an indicator of your indoor air quality. Combined with Venta AirConnect-compatible appliances, it lets you actively adjust the conditions to achieve healthier air in your home.
