

M65 Enterprise Release Notes

Every 6 weeks, Google releases an update to its Chrome Browser. Each release includes thousands of improvements and other changes. The following release notes are intended for IT administrators managing the Chrome Browser in their organization.

These release notes were last updated on April 4, 2018

See the latest version of these release notes online at <https://support.google.com/chrome/a/answer/7679408>

Release notes for Chrome 65

Security updates

Support for TLS 1.3

This release comes with the latest version of the Transport Layer Security (TLS) protocol ([TLS 1.3 draft 23](#)) turned on. Users of Cisco Firepower devices configured to perform TLS man-in-the-middle interception in Decrypt-Resign/SSL Decryption Enabled mode should see [Cisco's documentation](#).

Chrome policies

Changes [in this release](#):

Policy	Notes
--------	-------

AlwaysAuthorizePlugins	This policy was deprecated.
AbusiveExperienceInterventionEnforce	Prevent pages with abusive experiences from opening new windows or tabs.
AdsSettingForIntrusiveAdsSites	Set whether ads should be blocked on sites with intrusive ads.
DeviceLoginScreenAutoSelectCertificateForUrls	Automatically select client certificates for these sites on the sign-in screen (available on Chrome OS).
DisablePluginFinder	This policy was deprecated.
RestrictAccountsToPatterns	Restrict accounts that are visible in Chrome (available on Android.)
SecondaryGoogleAccountSignInAllowed	Allow multiple sign-in access within the browser (available on Chrome OS).
SecurityKeyPermitAttestation	URLs/domains are automatically permitted direct Security Key attestation.
SpellcheckEnabled	If this policy is on, the user is allowed to use spellcheck.
SpellcheckLanguage	This policy force enables spellcheck languages.
ThirdPartyBlockingEnabled	This policy enables third-party software injection blocking (available on Windows).
UnsafelyTreatInsecureOriginsAsSecure	This policy specifies a list of origins (URLs) to be treated as secure context. Learn more about secure contexts .
WebDriverOverridesIncompatiblePolicies	This policy allows users of the WebDriver feature to override policies that can interfere with its operation.

Developer changes

Ignore [<a download>](#) for cross-origin URLs

To avoid user-mediated information leakage, Chrome starts to ignore the presence of the download attribute on anchor elements with cross-origin attributes. See more details on [Chromium.org](#).

Deprecations

Mac OS X 10.9 Support

Chrome won't support Mac OS X 10.9. Chrome on Mac OS X 10.9 does not autoupdate. If you have Mac OS X 10.9, upgrade to a newer Mac OS.

Adobe Flash Deprecation

Adobe announced on July 25, 2017 it plans to deprecate Flash by the end of 2020. See [Adobe's announcement](#) and [Chrome's blog post](#) regarding the Flash deprecation.
